es sich bei diesen beiden Bildern um eine Art Wettspiel handelt, wobei Points gezählt wurden, ist wohl klar. Welcher Art dieses war, wissen wir nicht. Es lässt sich aber vermuthen, dass es irgendwie mit dem Ballspiele, das wir ja in dem Zeichen *olin* verkörpert sehen dürfen, zusammenhieng oder ihm gleich erachtet wurde. Und ebenso dürfen wir wohl annehmen, dass in diesem Wettspiele gewisse himmlische Vorgänge, vielleicht der Kampf der Sonne mit dem Monde, angeschaut wurde. Denn einerseits hängen diese beiden Bilder Abb. 288, 289 mit der Darstellung Abb. 290 zusammen, wo wir *Xochiquetzal*, als geköpfte Göttin, und ihr Thier mit Schalen (Pulqueschalen?) in der Hand, ferner Agave-Pflanzen, die abgeschnittene Haarflechte auf der Blattunterlage, einen Ballspielplatz und einen anderen Spielplatz (?), endlich Kautschukugel und Spindel, das Zeichen der Mondgöttin, in einer Gruppe vereinigt sehen, — eine Darstellung, für die die Abb. 291 aus dem Codex Nuttall eine interessante Parallele bildet. Andererseits endet die ganze Reihe, der diese Bilder der Wiener Handschrift angehören, auf Blatt 23 Kingsborough'scher Zählung, in einem mit der Hieroglyphe *ce xochitl* „eine Blume“ versehenen grossen Sonnenbilde, das über einer Tempelpyramide aufsteigt.

Abb. 290. Die geköpfte Göttin (*Xochiquetzal*) und die Agave-Pflanzen. Wiener Handschrift. Blatt 22 (Kingsborough'scher Zählung).

Abb. 291. *Xochiquetzal*, mit abgeschnittenem, nach hinten hängendem Kopfe. (Codex Nuttall 3.)

Die eigentlich mexikanischen Handschriften scheinen nun in der That diese Vermuthung zu bestätigen. Denn dort haben wir im Codex Borbonicus (Abb. 286) und im *Tonalamatl* der Aubin'schen Sammlung (Abb. 287) neben der *Xochiquetzal* und dem Thiere ihr gegenüber das in der Mitte durchkreuzte Bandviereck angegeben, daneben aber, statt der einfachen, von Stricken umschnürten Kautschukugel, die uns die beiden Handschriften der Codex Borgia-Gruppe zeigten, einen Ballspielplatz (*tlachtli*), mit einer Kautschukugel (*olli*), neben der im Codex Borbonicus ein Schädel und das Zeichen Wasser, die Elemente der Hieroglyphe des Mondes, gezeichnet sind. Zwischen beiden endlich ist das Bild des geköpften Sünders zu sehen, — oder der geköpften Lichtgottheit, denn das *cuitlatl*-artige Haar der betreffenden Figur im Codex Borbonicus könnten wir auch als ein Analogon der beiden (oder drei) über der Stirn aufstrebenden Haarlocken der Handschriften der Codex Borgia-Gruppe ansehen. Dass aber die geköpfte Lichtgottheit, oder der geköpfte Sünder, den bei der Annäherung an die Sonne halbirten Mond bezeichnet, ist nach den verschiedenen Nachweisungen, die ich in früheren Abschnitten dieses Bandes gegeben habe, wohl klar.

Demnach ist in den so räthselhaft aussehenden Bildern unserer Handschrift, der Kautschukugel

und dem Bandvierecke, der Kampf der Sonne mit dem Monde, oder der Mondgottheit, zum Ausdrucke gebracht, die eben das eigentliche Wesen der Göttin dieses *Tonalamatl*-Abschnittes, der *Xochiquetzal* ausmacht.

Abb. 292. *Xiuhtecutli*, der Feuergott, und *Xipe Totec* „unser Herr, der Geschundene“, der Erdgott, der Frühlingsgott. Herr des zwanzigsten *Tonalamatl*-Abschnittes *ce tochtli* „eins Kaninchen“. Codex Vaticanus B (Nr. 3773), Blatt 68 (= Kingsborough 2).

Abb. 293. *Xiuhtecutli*, der Feuergott, und *Xipe Totec* „unser Herr, der Geschundene“, der Erdgott, der Frühlingsgott. Herren des zwanzigsten *Tonalamatl*-Abschnittes *ce tochtli* „eins Kaninchen“. Codex Telleriano-Remensis fol. 23 verso, 24 (= Kingsborough II, 32, 33).

Der zwanzigste *Tonalamatl*-Abschnitt, *ce tochtli* „eins Kaninchen“, ist im Codex Borgia in der oberen Hälfte von Blatt 71, im Vaticanus (Abb. 292) auf Blatt 67 dargestellt.

Mit der *Xochiquetzal* des vorigen Abschnittes war die Reihe der Tageszeichengötter zu Ende gekommen. Es sind deshalb hier, als Regenten dieses zwanzigsten Abschnittes zwei neue Gottheiten

Abb. 294. *Xiuhotecutli*, der Feuergott, und *Xipe Totec* „unser Herr, der Geschundene“, der Erdgott, der Frühlingsgott, Herren des zwanzigsten *Tonalamatl*-Abschnittes *ce tochtli* „eins Kaninchen“. Codex Borbonicus 20.

Abb. 295. *Tonalamatl* der Aubin'schen Sammlung 20.

eingeführt worden. Es sind *Xiuhtecútlī* der Feuergott, und *Xipe Totec*, unser Herr der Geschundene. Sie könnten hier stehen, weil *ce tochtli* das Zeichen der Erde und *Xipe Totec* der Gott der Erde ist; und weil der dritte Tag in dieser Dreizehnheit, der Tag *yei itzcuintli* „drei Hund“, der Tag und das Zeichen des Feuergottes ist, da drei die Zahl der Herdsteine (*tenamaztli*), und der Hund, das beissende Thier, das Abbild des Feuers ist.

Xipe Totec ist in den beiden Handschriften der Codex Borgia-Gruppe in typischer Weise dargestellt, aber mit einem Steinmesser als Helmmaske, seinen rothen Rasselstab (*chicauaztli*) in der einen, ein steinernes Opfermesser in der anderen Hand haltend, und mit der abgezogenen Menschenhaut bekleidet. — In den eigentlich mexikanischen Handschriften ähnlich, nur dass er hier noch mit seinem Zapotablätterröckchen (*itzapocu*) bekleidet ist, das den Bildern der Handschriften der Codex Borgia-Gruppe fehlt. Im Codex Telleriano-Remensis (Abb. 293) hält er, statt des Steinmessers, ein Meerschneckengehäuse (*tecciztli*) in der Hand, das man in dem Bilde des Codex Borbonicus (Abb. 294) zwischen den beiden Göttern gezeichnet sieht, während es im *Tonalamatl* der Aubin'schen Sammlung (Abb. 295) vor dem Gesichte des Feuergottes angegeben ist. — Die Interpreten nennen den Gott *Xipe Totec* hier *Iztapaltotec*, d. h. „unser Herr, der flache Stein“, und sie erläutern, offenbar auf seine Helmmaske Bezug nehmend: — „pedernal ó cuchillo del guerrador ó desdichado ó dolorido, mas poprio es dezir pedernal sangriento del dolorido“ —, d. h. in kurzen Worten Opfermesser. Sie fügen aber dann hinzu: — „*yiztapali* propriamente es losa ó este asiento de la tierra“, — d. h. sie identifiziren unseren Gott mit der Erde. Und das Vorkommen dieses Gottes hier wird dann an dieser Stelle zum Schlusse durch die Bemerkung gerechtfertigt: — „In zwei Rohr (*ome acatl*) wurde der Himmel geschaffen, und die Thiere in eins Feuerstein (*ce tecpatl*) und die Erde in eins Kaninchen (*ce tochtli*).“ — Das Vorkommen des Meerschneckengehäuses in den eigentlich mexikanischen Handschriften, weist aber darauf hin, dass man bei dem Anfangstage dieses *Tonalamatl*-Abschnittes an das Kaninchen, das Abbild des Mondes, gedacht hat, denn das Meerschneckengehäuse ist das Zeichen des Mondgottes, der ja darnach geradezu *Tecciztecatl* „der aus dem Lande der Meerschnecke“ heisst. Wir dürfen wohl annehmen, dass vielmehr dieser Umstand die Veranlassung war, dass man *Xipe Totec* zum Regenten dieses Abschnittes wählte. Denn *Xipe Totec* ist seinem eigentlichen Wesen nach der Mondgott. Und den Feuergott hat man ihm gegenübergestellt, weil eben in diesen Abschnitt der Tag *yei itzcuintli* fällt, der, — wie ich oben angab, — in der That das Symbol und der Name des Feuergottes und der Ausdruck seines Wesens ist, daher auch durch den Handweiser des Interpreten dieser Tag als der eigentliche Festtag dieses Abschnittes bezeichnet wird. Oder aber, weil auch der Feuergott, der in der Zeit der Dunkelheit und der Nacht, vor der Geburt der Sonne da war, der der alte Gott, der „erste Mensch“ war, mit dem Monde und mit den Sternen in Verbindung steht. Für das letztere sprechen in der That gewisse Besonderheiten, die dieser Gott an dieser Stelle, zum wenigsten in unserer Handschrift, dem Codex Borgia, hat. Er ist nämlich hier nicht nur in seiner gewöhnlichen Farbe und Bemalung, mit dem feuerfarbenen Haare, der nach oben sich verbreiternden, in den Farben des Türkisvogels gemalten Krone (*xiuhtotoamacalli*) und den beiden Pfeilschäften, den *ome quammamalitli* im Haare, dargestellt — im Vaticanus (Abb. 292) auch mit dem Türkisvogel auf dem Halskragen, und im Codex Borgia mit der blauen, in Türkismosaik ausgeführten, stufenförmig ausgeschnittenen Brustplatte, mit der er ganz allgemein in den eigentlich mexikanischen Handschriften ausgestattet ist, — sondern er hat auch die beiden über der Stirne aufzüngelnden Locken, die als Abzeichen *Tlauizcalpantecutli*s und der Sterngötter und anderer astronomischer Gottheiten, der Mondgottheiten *Tlaçolteotl* und *Xipe Totec*, uns längst bekannt geworden sind. — Als Ohrgehänge trägt *Xiuhtecútlī* hier, nur in blauer Farbe, den Strahl, den wir als den Ohrschmuck der Göttin *Chantico* des Codex Telleriano-Remensis und des Kolossalkopfes der *Coyolxauhqui* kennen gelernt haben (vgl. Abb. 280 und 283, oben S. 274 und 277).

In der Mitte zwischen den beiden Gottheiten dieses Abschnittes ist im Codex Borgia ein in den Farben des Edelsteins (*chalchiuítli*) gemalter Topf gezeichnet, aus dem mit Godschellen besetzte Edelsteinhalsbänder (*chalchiuhcozcatl*) hervorragen. Denn der Feuergott war der Herr des Reichthums. „El que nacia en un conejo [*ce tochtli*]“ — sagt der Interpret — „seria hombre de luenga vida, y el que nacia en 5 *malinalli* seria mercader y rico“.

Im Codex Borbonicus (Abb. 294) und im *Tonalamatl* der Aubin'schen Sammlung (Abb. 295) sind

zwischen den beiden Göttern ein Feuergefäss und die Instrumente der Kasteiung und das Bild der Mitternacht, die das *tlatlapitzalizpan*, die Zeit der Kasteiung ist, angegeben. Darüber endlich sieht man im Codex Borbonicus auf der rechten Seite (über *Xipe Totec*) einen in den Zeichen des Edelsteins gemalten Behälter mit Maiskolben, denn *Xipe Totec* ist der agrarische Gott, der Lebensmittelspender. Auf der linken Seite aber, über *Xiuhtecútl*, dem Feuergotte, eine Schale mit einem Hirschfusse, ein Adlergefäss (*quauhxicalli*), ein Sklavenjoch (*quauhcozcatl*) und ein Bündel Speere, die, wie es scheint, diesen Gott als einen Gott des Krieges und der Jagd kennzeichnen sollen. Ich bemerke indes, dass wir im Codex Borbonicus dieselbe Kombination der Schale mit dem Hirschfusse, des Sklavenjochs, des Pfeilbündels, und auch das Zeichen der Mitternacht und der Kasteiung, bei *Xolotl*, dem Regenten des sechszehnten *Tonalamatl*-Abschnittes angegeben fanden.

24. Sonne, Mond und Morgenstern, und die dreizehn Vögel (die Stunden des Tages).

(Blatt 71 = Kingsborough 44.)

Dies prächtige Blatt zeigt uns auf der linken Seite *Tonatiuh*, den Sonnengott, der hier als rother Gott gemalt ist, wie in der mittleren Reihe des Blattes 15 unserer Handschrift, auch auf der Brust nicht, wie sonst, die Goldscheibe *teocuitlacomalli*, sondern die in Türkismosaik ausgeführte viereckige Platte des Feuergottes trägt, und auf dem von der Edelsteinkette umwundenen Haare die nach oben sich verbreiternde Krone (*xiuhtotocalli*) des Feuergottes thronen hat, aus der dann aber wieder die vier Adlerfederstreifen des Sonnengottes herausragen. Der Gott sitzt gewissermassen auf einer Sonnenscheibe oder in einer Sonnenscheibe, die ihrerseits auf einer, nach Art des *teocipalli*, aus Holz geschnitzten, mit Edelsteinen eingelegten und mit Metall beschlagenen Estrade ruht. Auf dieser Estrade ist die Scheibe eigentlich wohl in horizontaler Position zu denken, wie das Sonnenbild auf der Oberseite der grossen *quauhxicalli*-Steine. Da aber der Künstler das in der Zeichnung nicht wiedergeben konnte, und eben die volle Fläche der Sonnenscheibe zeigen musste, hat er sie aufrecht gestellt. In der Mitte ragt über dieser Sonnenscheibe ein Edelsteinband empor, das in einer grossen Blüthe endet. Um diese sind fünf Papier- oder Federfahnen geordnet, die wohl den fünf Weltgegenden oder Himmelsrichtungen entsprechen. Und darunter rinnt auf der einen Seite ein Strom gelber, mit Daunenfederballen besteckter Federn, auf der anderen ein Wasserstrom, der kleine gelbe Scheiben auf seiner Fläche trägt, herunter. Das ist eine hieroglyphische Wiedergabe der Phrase *teoatl-tlachinolli* „Wasser (Speerwerfen) und Brand“ des metaphorischen Ausdruckes für „Krieg“, wie wir das ähnlich schon auf dem Blatte 19 unserer Handschrift an der Estrade gesehen hatten, auf der *Tlauizcalpantecútl*, der Gott des Morgensternes kniet. Der Gott selbst hält in der einen Hand ein Bündel Speere, in der anderen das auf der Unterseite mit einem Büschel Adlerfedern verzierte blaue Wurfbrett (*xiuhatl*), das Instrument, mit dem die Speere geschleudert wurden, und dazu zwei Papierfähnchen (*amapamitl*), die Opferfahnen. Unter der Estrade hängen zwei Opferseile herunter, — Reiherfederseile (*aztamecatl*) genannt, weil an ihnen Daunenfederbälle und zwei Reiherfedern, die Symbole der himmlischen Höhe, des Hauses der Sonne, wohin die Geopferten gehen, eingeknüpft sind. Unter diesen Opferseilen endlich ist das Zeichen *nauí olin* „vier Bewegung“ angegeben, der Tag, der in der Tradition der Mexikaner und in den Bilderschriften sowohl der engeren mexikanischen Region, wie denen der Codex Borgia-Gruppe, als Zeichen und Symbol der Sonne, d. h. der gegenwärtigen, der historischen Sonne, des *Olintonatiuh*, der „Erdbebensonne“, bekannt ist, die, — im Gegensatz zu den vier prähistorischen Sonnen, die der Reihe nach durch Dunkelheit, durch Windstürme, Feuerregen und eine grosse Sintfluth ihr Ende fanden, — durch grosses allgemeines Erdbeben unterzugehen bestimmt ist. So sind also auf diesem Blatte die verschiedenen Vorstellungen, die die Mexikaner von der Sonne hatten, zu einem Gesamtbilde vereinigt.

Dem Sonnengotte gegenüber sieht man auf unserem Blatte eine in grünes *malinalli*-Gras gekleidete skelettköpfige Thiergestalt, die wohl eigentlich einen Affen vorstellen soll, da dieses Thier ganz allgemein in *malinalli*-Gras gekleidet dargestellt wird. Dieses Thier hat hier vor dem Sonnengotte eine Wachtel (*colin*) in der üblichen Weise durch Abreissen des Kopfes (*tlaquehcotonaliztli*) geopfert. Den abgerissenen Kopf hält diese Thiergestalt zusammen mit einem Opferfährchen in der einen Hand. Ein anderer abgerissener Wachtelkopf liegt auf dem Erdboden, der durch einen aufgesperrten *cipactli*-Rachen veranschaulicht ist. Den kopflosen Rumpf der Wachtel hält die skelettförmige Thiergestalt in der anderen Hand, und das der Halswunde des Vogels entströmende Blut geht geradeswegs in den Mund des Sonnengottes über. Er trinkt das Blut der Wachtel, er wird mit dem Blute der Wachtel genährt.

Ich möchte hier noch ein Paar Worte über die Wachtel und das Wachtelopfer sagen. Der natürlichen Färbung des Gefieders entsprechend, wird der Vogel in der Regel blau und mit blauem Schnabel gemalt, aber der Scheitel und der Leib, und der eigentliche Körper der Schwung- und Steuerfedern werden mit Augenflecken, mit weissen Flecken auf schwarzem Grunde, angegeben, d. h. der Vogel ist *cicittalló* „sternhimmelfarben“ gemalt. Dass die Gefiederzeichnung der Wachtel in der That in dieser Weise aufgefasst wurde, dafür scheint mir gerade das Bild der Wachtel, die auf unserem Codex Borgia-Blatte geopfert wird, zu sprechen. Denn hier ist der Hals und der Leib nicht einfach mit weissen Kreisen, sondern mit Daunenfederbällen auf schwarzem Grunde, also in der gleichen Weise *cicittalló* „sternhimmelartig“ wie die Arme *Tlauizcalpantecutli*'s, der Gottheit des Morgensterns, gezeichnet. Es ist demnach die Wachtel, als Thier, gewissermassen das Abbild der zum Opfer Bestimmten, die auch *mixcitalhuiticac*, mit der Sternhimmelbemalung im Gesichte, wie *Tlauizcalpantecutli* und wie *Mixcouatl*, versehen wurden, weil sie in das Haus der Sonne, zum Himmel, zum Himmel des Morgensternes, giengen, dort als Gefolge, als Diener, ja gewissermassen als Vertreter der Sonne, weiter zu leben. Wenn es also ausschliesslich Wachteln waren, die der Sonne und den verwandten grossen Göttern, *Uitzilopochtli* u. s. w. geopfert wurden, so geschah das nicht deshalb etwa, weil die Wachtel der Vogel war, der am ehesten zur Hand war, sondern weil die Wachtel das Abbild der Opfermenschen, der Seelen der geopfertem Krieger, der Begleiter, Diener und Vertreter der Sonne, war.

Wenn nun aber die Wachtel in der That *cicittalló* „sternhimmelartig“ bemalt ist, so sollte man vermuthen, dass sie auch in dem Ausputze des Sterngottes *κατέξοχην*, *Tlauizcalpantecutli*'s, der Gottheit des Planeten Venus, Verwendung gefunden hätte. Das ist nun allerdings nicht der Fall. Aber vielleicht nur deshalb nicht, weil für die Zeichnung und den Schmuck dieses Gottes, (wie auch für den des verwandten Feuergottes) eine andere Art *cicittalló*-Federn, nämlich die schwarzen, mit einem weissen Endfleck versehenen Schwanzfedern des Truthahns konventionell geworden waren.

Dagegen erscheint die Wachtel oder die Wachtelfedern in dem Schmucke und dem Ausputze zweier anderer Götter, der Mondgöttin *Tlaçolteotl* und *Xipe Totec*'s, zweier ihrem Wesen nach eng verwandter Gestalten. In den Bildern des *Tonalamatt*'s der Aubin'schen Sammlung (vgl. unten Abb. 297) ist die Wachtel geradezu als die Verkleidung *Xipe Totec*'s gezeichnet. Ich habe mir das früher in der Weise gedeutet, dass ich annahm, dass die Wachtel das am Boden lebende Thier, das Thier der Erde, sei und deshalb den ja in der That auch die Erde und die Erzeugnisse der Erde repräsentirenden oder hervorrufenden beiden genannten Gottheiten verwandt erachtet worden sei. Ich neige aber doch jetzt eher der Ansicht zu, dass das Sternhimmelartige der Gefiederzeichnung der Wachtel auch hier den Ausschlag gegeben hat, da ja diese beiden Gottheiten auch himmlische Gestalten sind, das grosse Gestirn der Nacht, den wachsenden und abnehmenden und wieder sich erneuernden Mond, und damit die Potenz des Wachstums und der Erneuerung, in sich verkörpern.

Dürften wir in der That annehmen, dass die Wachtel als der sternhimmelartige Vogel das Abbild der *Tlaçolteotl* und *Xipe Totec*'s geworden sei, so erscheint die Art, wie das Wachtelopfer vollzogen wurde, das *tlaquehcotonaliztli*, das „Halsdurchschneiden“, bzw. Kopfabreissen, vielleicht noch in einem besonderen Lichte. Es ist ja eigentlich an sich nicht unnatürlich, dass man Vögel opferte, indem man ihnen den Kopf abbriss. Man schlachtet bei uns, zum mindesten Tauben und andere kleine Vögel, genau in der gleichen Weise. Aber andererseits müssen wir doch daran denken, dass es das Schicksal des Mondes ist, halbt, geköpft zu werden, wenn er der Sonne näher rückt, dass deshalb die *Coyolxauhqui* von dem

jungen *Uitzilopochtli* geköpft wurde und dass auch das Abbild der *Tlaçolteotl* an ihrem grossem Feste zur herbstlichen Erntezeit durch Abschneiden des Kopfes geopfert wurde. Es liegt gewiss nicht ganz fern anzunehmen, dass diese Vorstellung auch in dem *tlaquehcotonalitzli*, in dem Wachtelopfer, zum Ausdrucke gekommen ist. Indem nun hier auf unserem Codex Borgia-Blatte vor dem Sonnengotte ein Wachtelopfer dargestellt worden ist, würde darin nur eine weitere Kennzeichnung des Wesens dieser Gottheit liegen, da der Sonnengott es ist, der an dem Monde diese Dekapitierung vollzieht.

An dem oberen Rande endlich des Mittelfeldes unseres Codex Borgia-Blattes, gerade über dem die Wachtel opfernden Skelette sind die beiden anderen Himmelskörper abgebildet, deren Bewegungen neben denen der Sonne von den Mexikanern beobachtet, und deren Erscheinungsformen und Schicksale von ihnen in zahllosen Mythen erzählt und in einer Fülle von Göttergestalten, die den Hauptinhalt ihres Olympes ausmachten, angeschaut worden sind, — *Tlauizcalpantecutli*, der Morgenstern, und *Metztli*, der Mond.

Der erstere ist hier durch das Datum *ce acatl* „eins Rohr“ bezeichnet, das das Jahr oder der Tag war, an dem *Quetzalcouatl*, der nach Osten (*teotl iixco*) wandernde Gott, d. h. der dem Morgen, der Sonne sich nähernde, abnehmende Mond, in dem *Tlillan Tlapallan*, an der Grenze zwischen dem schwarzen und dem rothen Felde, an dem von dem Nordpfeiler und dem Südpfeiler des Himmels begrenzten Thore, durch das die Sonne herauskommt, in dem *Tlatlayan*, dem „Orte des Brennens“, angelangt ist und dort den Scheiterhaufen besteigt und sich verbrennt, d. h. in den Strahlen der aufgehenden Sonne sein Ende findet, — oder nach anderen in dem Wasser, dem Meere, das dort die Erde und den Himmel begrenzt, d. h. im Osten, in räthselhafter Weise verschwindet. Während die einen Mythen nun in logischer Weise auf die Erneuerung des Mondlaufs hinweisen, indem sie den Gott seinen Jüngern verkünden lassen, dass er wiederkommen und sein Reich wieder aufrichten werde, — eine Fabel, die so viel zu dem Erfolge des Cortes und seiner dem Meere des Ostens entstiegenen Genossen beigetragen hat, — bringen andere Mythen das Verschwinden des Mondes in der Sonne des Morgens und das Sichtbarwerden des Morgensterns neben oder kurz vor dem aufgehenden Tagesgestirn in genetische Verbindung. Man erzählte, dass, als *Quetzalcouatl* auf dem Scheiterhaufen sich verbrannte, die Asche zerstäubte und sich in allerhand Vögel von glänzendem Gefieder, Kolibri und andere, sich verwandelte, — d. h. in die im Himmel des Ostens, dem Hause der Sonne (*tonatiuh ichan*) wohnenden Seelen der geopfertten Krieger, — sein Herz aber als Morgenstern am Himmel emporstieg. Darum ist *Ce acatl*, das Jahr oder der Tag, an dem *Quetzalcouatl* sich verbrannte und starb, zum Namen des Morgensterns geworden, als solcher z. B. im Codex Telleriano-Remensis bei dem Bilde *Tlauizcalpantecutli's*, der *Xiuhotecutli*, dem Regenten des neunten *Tonalamatl*-Abschnittes, gegenüber abgebildet ist, angegeben (vgl. Abb. 236, oben S. 236). Und es ist darnach zweifellos sicher, dass das Datum *Ce acatl* „eins Rohr“, das hier auf unserem Codex Borgia-Blatte am oberen Rande des Mittelfeldes angegeben ist, den Morgenstern bezeichnet. Von einer gewissen Wichtigkeit ist es dabei vielleicht auch, dass das Bild des Pfeilschaftes, das den Lautwerth *acatl* „Rohr“ hat, hier mit dem Trapeze und dem Strahle, die das Abbild und das Zeichen des Jahres sind, verbunden erscheint. Es scheint damit das Datum *Ce acatl* „eins Rohr“, das die Zeit des Todes *Quetzalcouatl's* und der Geburt des Morgensternes angibt, als ein Jahres- und nicht ein Tagesdatum bezeichnet werden zu sollen.

Wie wir nun in Bezug auf die Deutung des Datums *Ce acatl* keinen Augenblick in Zweifel sein können, so ist es auch sicher, dass das dritte Bild, das neben dem Datum des Morgensternes zu sehen ist, der aus Knochensubstanz gefertigte Nasenhalbmund, der von dem Bilde der Nacht umgeben ist und in seinem Innern mit Wasser gefüllt ist, auf dem ein weisses Kaninchen sichtbar wird, *Metztli*, den Mond, darstellt. Wir haben den Mond genau in gleicher Weise auf dem Blatte 55 unserer Handschrift bei der *Tlaçolteotl*, der Mondgöttin, und auf dem Blatte 10 bei dem *tlaelquani*, dem „Dreckfresser“, der hieroglyphischen Bezeichnung der *Tlaelquani* oder *Tlaçolteotl*, der Mondgöttin, abgebildet gefunden.

Warum sind nun hier diese drei Lichtkörper dem Beschauer vorgeführt worden? Offenbar nicht einfach, um sie, die grossen Lichtkörper, zu zeigen. Diese ganze Bilderschrift ist nicht ein einfaches Bilderbuch, sondern diente sehr realen und für jene Leute sehr wichtigen Zwecken. Es ist ein Kalenderbuch im engsten Sinne des Wortes und hatte vor allem die Bedeutung, die ja auch unsere Kalender

lange Zeit gehabt haben, Geschick und Ungeschick für Personen, Zeiten und Handlungen zu bestimmen. Die drei Lichtkörper sind auf unserem Blatte aufgeführt, weil es die grossen Zeitmesser sind, deren Bewegungen den Gang der Zeit und bestimmte Zeitabschnitte und Zeitpunkte uns erkennen lassen. Dabei sind aber auf unserem Blatte der Morgenstern und der Mond augenscheinlich nur als Supplement, einem Vollständigkeitsbedürfnisse in der Darstellung zu genügen, hinzugefügt worden. Das beweist schon die untergeordnete Stelle, an der sie stehen, und die relative Kleinheit der Bilder. Die Hauptperson ist offenbar die Sonne, bzw. der gross und schön gezeichnete Sonnengott. Dass in der Hauptsache hier der Sonnengott als Kalendergott gemeint ist, und in welcher Weise, das zeigen die dreizehn Vogelgestalten, die das Blatt von drei Seiten umsäumen.

Diese dreizehn Vögel haben ihre Parallele in ebenso vielen Vögeln, die theils als einfache Vögel (im Codex Borbonicus, Abb. 296), theils als Vögel, die die Verkleidungen von Göttergestalten bilden (im *Tonalamatl* der Aubin'schen Sammlung, Abb. 297), auf sämtlichen achtzehn, (ursprünglich zwanzig) Blättern des *Tonalamatl's* des Codex Borbonicus und des *Tonalamatl's* der Aubin'schen Sammlung neben den (eine erste Kolumne bildenden) Zeichen, bzw. Namen, der dreizehn Tage, die jeder *Tonalamatl*-Abschnitt, bzw. jedes Blatt, des *Tonalamatl's* enthält und neben einer zweiten Kolumne, in der die Reihen der neun sogenannten „Herren der Nacht“ sich wiederholen, aufgeführt sind. Die dreizehn Vögel erscheinen dabei als die Begleiter oder die Genossen einer Reihe von dreizehn Gottheiten (vgl. Abb. 298 und 299), die ebenfalls auf sämtlichen achtzehn (ursprünglich zwanzig), Blättern der genannten *Tonalamatl*, und zwar als dritte Kolumne, in unmittelbarem Anschlusse an die zweite Kolumne, in der die Reihen der neun „Herren der Nacht“ sich wiederholen, abgebildet sind. Ich habe in meiner Erläuterung des *Tonalamatl's* der Aubin'schen Sammlung¹⁾ dieses Vorkommen durch die Annahme erklärt, dass die neun „Herren der Nacht“, die wir ja auch in unserer Handschrift auf dem Blatte 14 in grossen Bildern dargestellt finden, und die ich im I. Bande dieser Erläuterungen, S. 218ff., besprochen habe, die Herren der fünf Weltgegenden und zugleich die Herren der neun Stunden der Nacht, sind und deshalb auf den Blättern des in zwanzig dreizehntägige Abschnitte geordneten *Tonalamatl's* in fortlaufenden Reihen wiederholt worden sind. Und ebenso, dass die dreizehn Gottheiten und die dreizehn Vögel, sowie die Gottheiten, deren Verkleidungen die letzteren bilden, den dreizehn Himmeln, bzw. den dreizehn Stunden des Tages, entsprechen.

Dass die dreizehn Götter (Abb. 298, 299) in der That den dreizehn Himmeln entsprechen, dafür hat sich neuerdings in dem interessanten Thévet'schen Bruchstücke, das Dr. Ed. de Jonghe in der Bibliothèque Nationale in Paris aufgefunden und im Journal de la Société des Américanistes de Paris, Nouvelle Série, Tome II, Nr. 1 (1905) p. 1—41 unter dem Titel „Histoyre du Mechique“ veröffentlicht hat, eine interessante Bestätigung gefunden. Es sind dort die dreizehn Himmel mit ihren Bewohnern aufgeführt, und man wird sehen, dass diese fast genau den dreizehn Göttern (Abb. 298, 299) entsprechen. Es heisst dort im 6. Kapitel (l. c. p. 22): —

- „Croioyent les Mechiquiens et beaucoup de ses circonvoisins qu'il y avoyt treze cieux,
1. Au premier des quels estoyt ung dieu nommé *Rinteutli* (verbessere: *Xiuhteutli*), dieu des années.
 2. Au segond, la déesse de la terre *Rontli* (verbessere: *Tlalteutli*).
 3. Au troisième *Chalcintli* (verbessere *Chalchiuhkli*) que veult dire maison de una deesse.
 4. Au quatriesme, *tonativ* (verbessere: *Tonatiuh*) qui est le soleil.
 5. Au cinquiesme, cinc dieux chascung de diverse couleur, à cause de cela dits *tonaleque*.
 6. Au sixiesme *Mitlanteutli* (verbessere: *Mictlanteutli*) qui est dieu des enfers.
 7. Au septiesme *tonacateutli* (verbessere: *Tonacateutli*) et *tonacacilmatl* (verbessere: *Tonacaciuatl*) deux dieux.
 8. A l'huictième *Tlalocateutli* (verbessere: *Tlalocanteutli*) dieu de la terre.
 9. Au neufviesme *Calcouatl* (verbessere: *Quetzalcouatl*) ansi ung des principaulx idoles, duquel et des aultres nous parlerons après.
 10. Au dixiesme *Tezcattlipuca*, aussi idole principal.

11. A l'onzième *Yoaltentli* (verbessere: *Youalteutli*) qui veut dire dieu de la nuit ou de l'obscurité.

12. Au douzième *Tlahuizcalpan tehutli* qui veut dire dieu de l'aube du jour.

13. Au treizième et dernier plus haut, avoyt ung dieu nommé *teotli* (verbessere: *[Ome]teutli*) que veut dire deux dieux, et une déesse, nommée *Omecinatl* (verbessere: *Omeciuatl*) que veut dire deux déesses.

Oultre tous ceux-ci croyoynt-ils qu'il y avoyt beaucoup de aultres dieux en chascun des cieus. —

Wie genau diese Götter der dreizehn Himmel den dreizehn Göttern (Abb. 298, 299) der *Tonalamatl*-Blätter des Codex Borbonicus und des Manuskripts der Aubin'schen Sammlung entsprechen, das zeigt ein Blick auf die Reihe dieser dreizehn Götter, wie ich sie seiner Zeit in meiner Erläuterung des *Tonalamatl*'s der Aubin'schen Sammlung bestimmt habe und die ich hier wiedergebe.

- | | |
|--|--|
| 1. <i>Xiuhtecutli</i> , der Feuergott. | 8. <i>Tlaloc</i> , der Regengott. |
| 2. <i>Tlaltecutli</i> , die Erdgöttin. | 9. <i>Quetzalcouatl</i> , der Windgott. |
| 3. <i>Chalchiuhtlicue</i> , die Wassergöttin. | 10. <i>Tezcatlipoca</i> . |
| 4. <i>Tonatiuh</i> , der Sonnengott. | 11. <i>Miclantecutli</i> , der Todesgott. |
| 5. <i>Tlaçolteotl</i> , die Mondgöttin. | 12. <i>Tlahuizcalpantecutli</i> , der Gott des Planeten Venus. |
| 6. <i>Teoyaomiqui</i> , der tote Krieger. | 13. <i>Citlalin icue</i> , <i>Ilamatecutli</i> , die alte Göttin, die Göttin des Sternhimmels. |
| 7. <i>Xochipilli Cinteotl</i> , der junge Gott der Lebensmittel, der Maisgott. | |

Dass hier die unter Nr. 7 genannten Götter *Xochipilli Cinteotl* der *Tonalamatl*-Blätter und *Tonacatecutli* der „Histoyre du Mechique“ ident zu setzen sind, ist klar. Wir haben oft genug in den Parallelen der vorhergehenden Blätter diese beiden Götter einen für den anderen eintreten sehen. Und dass die alte Göttin *Ilamatecutli* (Nr. 13) und die Götter des obersten Himmels, die von dort die Kinder in die Welt schicken, d. h. *Ometecutli* und *Omeciuatl*, gleich zu setzen sind, ist ebenso sicher.

Ernstlicher Zweifel, ob eine Korrespondenz vorliegt, könnte nur bezüglich der fünften Gottheit der Reihe bestehen, wo auf den *Tonalamatl*-Blättern deutlich *Tlaçolteotl*, die „Göttin des Unraths“, die Mondgöttin, gezeichnet ist, während die „Histoyre de Mechique“ fünf Götter verschiedener Farbe nennt, die *tonaleque* genannt wurden. Aber auch dieser Zweifel schwindet sofort, wenn man erwägt, dass *Tlaçolteotl*, die Mondgöttin, und die *Ciuateteô* ident zu setzen sind, die ja zu fünfen und in verschiedenen Farben erscheinen und in der That *tonalêquê* „Herren eines Tageszeichens (*tonalli*)“, d. h. an bestimmte Tageszeichen gebunden sind.

Dass aber diese Liste auch den Vorstellungen entspricht, die in anderen Darstellungen der dreizehn Himmel, z. B. der bekannten Darstellung auf dem ersten Blatte des Codex Vaticanus A (No. 3738) zum Ausdruck kommen, wird man nicht verkennen können. Man muss nur festhalten, dass auf diesem Blatte, sowohl für die Reihe der Himmel, wie für die Reihe der Unterwelten, die Erdoberfläche (*tlaticpac*) als Ausgangspunkt genommen und mitgezählt wird. Dann ist in der That der *tlaticpacuê*, der Herr der Erdoberfläche, d. h. der Feuergott, der erste in den beiden Reihen, der der dreizehn Himmel und der neun Unterwelten, wie er es in den beiden Reihen der dreizehn Götter und der neun sogenannten „Herren der Nacht“ ist. Es ist dann das *Omeyocan*, der „Ort der Zweiheit“, der Wohnsitz *Ometecutli*'s, der im Vaticanus als der oberste der Himmel angegeben wird, in der That der dreizehnte Himmel; das *iz mictlan opochcalocan*, das „Verschlossene“, das „Totenreich“, der Wohnsitz *Miclantecutli*'s, in der That die neunte der unterirdischen Regionen. Es würde die zweite Region des Codex Vaticanus, der *ilhuicatl tlaloca y pan metztli*, der Himmel, wo der Mond und die Wolken gehen, der Erdkröte der *Tonalamatl*-Blätter; der *ilhuicatl Citlalicue* der *Chalchiuhtlicue* der *Tonalamatl*-Blätter entsprechen, und dann in der vierten Region sowohl in der Liste der *Tonalamatl*-Blätter, wie in der des Vaticanus, die Sonne (*Tonatiuh*) ihren Platz haben. Im Einzelnen wird es natürlich an Varianten, an Zusammenziehungen und Umstellungen nicht gefehlt haben, das liegt in der Natur der Sache. Aber, wie gesagt, der Thatsache, dass hier eine einheitliche Grundvorstellung vorliegt und von der Tradition festgehalten worden ist, wird man sich nicht entziehen können.

Eine weitere eigentümliche Tatsache, die in der Liste der dreizehn Götter der *Tonalamatl*-Blätter

auch schon zu erkennen ist, die aber mit besonderer Deutlichkeit erst in der Liste der dreizehn Himmel der „Histoyre de Mechique“ in die Augen springt, ist die Identität der siebenten und der dreizehnten Stelle. Für beide sind in der „Histoyre du Mechique“ *Ome tecutli* und *Ome ciuatl* die Herren der Zeugung genannt. Beide sind damit als der obersten Region angehörig bezeichnet. Das ist natürlich nur in Folge der Übertragung möglich, die ich von Anfang an bei diesen dreizehn Göttern vermuthet habe, dadurch dass man die dreizehn Himmel den dreizehn Stunden des Tages verglich oder ihnen gleichsetzte. Von den dreizehn Himmeln ist natürlich der dreizehnte der höchste. Von den dreizehn Stunden des Tages aber die in der Mitte gelegene, die siebente, die Mittagstunde, wo die Sonne den höchsten Punkt ihrer Bahn erreicht. Dass eine solche Parallelsirung, eine solche Übertragung thatsächlich stattgefunden hat, ist damit erwiesen. Es werden natürlich, um sie zu Stande bringen zu können, allerhand Umdeutungskunststückchen nöthig gewesen sein. Die Erhebung der siebenten Stelle zum Range der dreizehnten ist eines davon. Und es versteht sich von selbst, dass bei dieser Übertragung nicht alles ganz glatt, nicht ohne Ausgleichung jeglichen Widerspruchs, vor sich gegangen sein wird.

Diesen die dreizehn Himmel und zugleich die dreizehn Tagesstunden bezeichnenden Göttern schliessen sich nun die dreizehn Vögel unseres Codex-Borgia-Blattes und der *Tonalamatl* Blätter an. Auch von ihnen wird sich nachweisen lassen, dass sie den dreizehn Tagesstunden entsprechen sollen.

Das will ich in den folgenden Betrachtungen zeigen:

1. Der erste der dreizehn Götter (vgl. Abb. 298, 299), *Xiuhcutli* oder *Ixoçauhqui*, der Feuergott, muss darnach der ersten Tagesstunde entsprechen, wo es noch dunkel ist, die Sonne noch nicht über dem Horizonte erschienen ist. Da die entsprechende Abendstunde, die letzte Tagesstunde, wie wir sehen werden, durch das Bild der Sternhimmelgöttin veranschaulicht wird, so werden wir wohl annehmen dürfen, dass der Feuergott bei dieser Uebertragung als der *Citlallatonac*, der Sternhimmelgott, aufgefasst worden ist. Als die Vogelgestalt, die dieser Tagesstunde und also auch diesem Gotte wesensverwandt ist, sehen wir auf unserem Codex Borgia-Blatte und im Codex Borbonicus (Abb. 296) einen blauen, türkisfarbenen (*xiuh-palli*) gemalten, spitzschnäbligen Vogel abgebildet, der vielleicht einen Kolibri (*uitzitzilin*) vorstellen soll. Im *Tonalamatl* der Aubin'schen Sammlung (vgl. Abb. 297) ist dieser Vogel als Verkleidung (*naualli*) oder andere Form *Tlauizcalpantelicut's*, der Gottheit des Morgensterns, dargestellt und entsprechend mit weisser Farbe gemalt. Der Feuergott und der Morgenstern sind Genossen. Wir haben sie so als Herrn des neunten *Tonalamatl*-Abschnittes kennen gelernt. Vielleicht dürfen wir aber auch geradezu hier, — das legt mir die Betrachtung der zweiten Tagesstunde nahe — für den Morgenstern die Seelen der geopfertten Krieger setzen, die, wie erzählt wird, im Osten den Aufgang der Sonne erwarten, um sie als Diener zum Zenith zu geleiten.

2. Die zweite Tagesstunde würde darnach in der Reihe der dreizehn Götter (Abb. 298, 299) durch das Bild der Erdkröte, die ein Steinmesser aus ihrem Rachen entlässt, im *Tonalamatl* der Aubin'schen Sammlung einfach durch einen Todesgott zur Anschauung gebracht sein. Der Vogel, der dieser Stunde entspricht, die zweite der dreizehn Vogelgestalten ist in unserer Handschrift und im Codex Borbonicus (Abb. 296) in derselben Art gezeichnet, wie der der ersten Tagesstunde, aber nicht blau (türkisfarben), sondern grün, in der Farbe des grünen Edelsteins (*chalchiuhpalli*), gemalt. Das Bild muss daher wohl ungefähr das gleiche bedeuten, wie das, das die erste Tagesstunde kennzeichnete. Die Kröte mit dem Steinmesser im Rachen erweckt die Vorstellung eines Aufgehens, eines Aufsteigens aus der Erde. Dabei kann es sich aber wohl kaum um die Sonne selbst handeln. Denn in dem *Tonalamatl* der Aubin'schen Sammlung ist der zweite Vogel als Verkleidung eines Gottes dargestellt, der eine dunkle (schwarze oder grüne) obere Gesichtshälfte und rothe Mundpartie hat und eine Krone von bunten Federn trägt, aus der eine einzelne Quetzalfeder herausragt. Die entsprechende Abendstunde, die zwölfte Tagesstunde, ist, wie wir sehen werden, durch die Gottheit des Planeten Venus veranschaulicht. Da in dieser Reihe eine durchgehende Parallität zwischen Morgen- und Abendstunden besteht, so werden wir wohl annehmen dürfen, dass es sich in dieser zweiten Morgenstunde auch um den Planeten Venus, um das Aufgehn des Morgensterns handelt.

3. Die dritte Tagesstunde wäre dann in der Reihe der dreizehn Götter (Abb. 298, 299) durch das Bild der *Chalchiuhtlicue*, der Göttin des fliessenden Wassers, veranschaulicht. Der Vogel, der dieser Tagesstunde ent-

spricht, ist in unserer Handschrift als ein kleiner Raubvogel, mit rundem Kopfe und rings von Steinmessern umsetzt, gezeichnet. Ihm entspricht im Codex Borbonicus (Abb. 296) ein in düsteren Farben (braun) gemalter Vogel, mit gekrümmtem raubvogelartigem Schnabel, der aber hier noch weniger, als der Vogel unserer Handschrift, zoologisch zu bestimmen ist. Im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) ist er die Verkleidung eines als rother (*tlatlauhqui*) *Tezcatlipoca* gemalten, aber mit dem Scheitelfederkämme (*iquachichiquil*) des Gottes *Xochipilli* und *Macuil xochitl* versehenen Gottes, der wohl zweifelsohne *Xochipilli* oder *Macuil xochitl* selbst vorstellen soll. Und wir müssten darnach schliessen, dass dieser dritte Vogel der *quetzalcoaxcoxtli* sein soll, das Waldhuhn, das in der Morgenfrühe singt, und das die bekannte Verkleidung dieser beider Götter bildet. Die entsprechende Abendstunde, die elfte Tagesstunde würde in der Reihe der dreizehn Götter durch eine Art Todesgott bezeichnet sein, der aber schwarzes Gesicht und rothe Mundpartie, also die umgekehrte Bemalung des Feuergottes hat; in der Reihe der dreizehn Vögel durch den rothen *Arara*, den Feuervogel, bzw. im *Tonalamatl* der Aubin'schen Sammlung durch denselben als Verkleidung *Xochipilli*'s erscheinenden Vogel, wie der, der die dritte Morgenstunde darstellt. Wir werden daher wohl schliessen dürfen, dass die dritte Morgenstunde die Morgendämmerung oder Morgenröthe, die elfte Tagesstunde die Abenddämmerung oder die Abendröthe bezeichnet.

4. Die vierte Tagesstunde, wo es nunmehr heller Tag ist, wäre dann in der Reihe der dreizehn Götter in durchaus passender Weise durch das Bild des Sonnengottes *Tonatiuh* selbst bezeichnet. Der Vogel dieser Tagesstunde ist die Wachtel (*colin*), die in allen drei Handschriften ziemlich kenntlich gezeichnet ist. Das ist das Thier, das den Sternhimmel auf seinem Gefieder zeigt, und ist deshalb wohl auch als Abbild des Himmelsgottes, der Sonne, betrachtet worden, wie ja es in der That das reguläre Opfer für den Sonnengott war. Im *Tonalamatl* der Aubin'schen Sammlung aber (Abb. 297) erscheint die Wachtel als die Verkleidung *Xipe Totec*'s. Vielleicht aus dem gleichen Grunde. Denn er, wie die auch mit Wachtelfedern bemalte *Tlaçolteotl*, sind ja ursprünglich ebenfalls himmlische Gestalten, sind die Verkörperungen des anderen grossen Himmelskörpers, des Mondes.

5. Für die fünfte Tagesstunde würde dann in der Reihe der dreizehn Gottheiten (Abb. 298, 299) *Tlaçolteotl* die Göttin des Unraths, die Mondgöttin, stehn, durch ihre Baumwollkopfbinde (*ichecazochitl*) und den mächtigen aus Wachtelfedern und gelben Federn bestehenden Scheitelschmuck gekennzeichnet. Sie muss hier offenbar in der Rolle als *quauheiuatl* als die „Kriegerin“ aufgefasst sein. Denn der Vogel, der dieser Tagesstunde entspricht, ist *quauhtli*, der Adler, der auf unserem Codex Borgia-Blatte auch ganz deutlich, mit dem dunklen Gefieder, den sich sträubenden Kopffedern und rings mit Steinmessern umsetzt gezeichnet ist, die seine Raubvogelnatur kennzeichnen. Im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) ist er mit tiefschwarzer Farbe angegeben und bildet die Verkleidung einer die Krieger-Tanz-Bemalung im Gesichte tragenden, und mit dem Reiherfedergabelbusche (*aztavelli*) der Krieger geschmückten Gestalt, d. h. eines Vertreters des Krieges.

6. Die sechste Tagesstunde wäre dann in der Reihe der dreizehn Götter im Codex Borbonicus bald durch eine die Kennzeichen des Feuergottes und des Todesgottes in sich vereinende, einen mächtigen Wachtelfederschmuck auf dem Scheitel tragende Gestalt (Abb. 298) bald durch einen Toten, eine skelettköpfige Figur, bezeichnet, die eine mit grossen Quasten versehenen Netzdecke (*ayatl*), d. h. einen Kriegermantel, über den Rücken hängen hat; im *Tonalamatl* der Aubin'schen Sammlung (Abb. 299) aber durch eine Gestalt, die die Gesichtsbemalung *Tezcatlipoca*'s mit Abzeichen des Todesgottes verbindet. All diese Bilder stellen den *tonatiuh ilhuicac yauh*, den geopfertem Krieger, die Seele des toten Kriegers, vor. Und die sechste Tages-, d. h. die letzte Vormittagsstunde, wäre dann durch diese Bilder bezeichnet worden, weil bis zum Mittage, bis zum Zenithe, die Seelen der geopfertem Krieger, die ihren Wohnsitz im Osten haben, die Sonne begleiten. Ganz entsprechend ist als Vogel dieser Tagesstunde *tecolotl*, die Eule, gezeichnet und diese im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) als Verkleidung eines *tlauauantli*, einer weiss mit rothen Längslinien gemalten, mit Daunenfederbällen auf dem Kopfe beklebten Gestalt, d. h. eines Menschen in Opfertracht, dargestellt.

7. Die siebente Stunde ist dann die Mittagstunde. Diese würde darnach in der Reihe der dreizehn Götter des *Tonalamatl*'s der Aubin'schen Sammlung (Abb. 299) durch den Sonnengott in Vogelverkleidung bezeichnet sein. Dabei kann man an den *Kinich kakmó* von *Itzmal* denken, den Vogel, der zur

Mittagsstunde herabkam, um das Opfer auf dem Altare zu verbrennen, — „como baxava volando la vacamaya, con sus plumas de varias colores“.¹⁾ Man kann aber auch an die Vögel von buntem Gefieder denken, in die sich die Seelen der toten Krieger am Mittag wandeln, nachdem sie ihren Dienst bei der Sonne gethan (vgl. oben S. 89). Der Codex Borbonicus (Abb. 298) hat dafür einen rothen Maisgott (*Cinteotl*), auf dessen rother über den Rücken herabhängender Decke an einer Stelle wenigstens dieselben Figuren zu sehen sind, die im Codex Magliabecchiano XIII, 3, das *quemtl* des Gottes *Xochipilli* bezeichnen (vgl. Abb. 65, oben S. 94). Dass dieser *Xochipilli* mit dem Maisgotte (*Cinteotl*) dieses Codex Borbonicus-Bildes gemeint ist, scheint sicher zu sein. *Xochipilli* wird in der That in dem Liede *Yoalticatl* und *Cinteotl* genannt. Er ist der *quetzalcoacoctli*, der in der Morgenfrühe singt, und ursprünglich wohl die Sonne in Vogelgestalt — In der Reihe der dreizehn Vögel ist die Mittagsstunde durch eine ganz abweichende Gestalt bezeichnet, nicht einen Vogel, sondern einen Schmetterling, der in unserer Handschrift als weisser, mit rother Häkchenzeichnung erfüllter und mit Daunenfederbällen besetzter, also als ein *tiça-papalotl iui-papalotl* gezeichnet ist, in den anderen beiden Handschriften eine etwas abenteuerliche, doch immerhin kenntliche Gestalt hat, und im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) als Verkleidung des Feuergottes erscheint. Dieser Schmetterling bezeichnet nun offenbar die Seelen der toten Krieger, die, nachdem sie ihren Dienst bei der Sonne gethan, sich in Blüten saugende Kolibri oder in Schmetterlinge verwandeln — *auh njman c'ic'c'manj, novian tlätlachichina, qujchichina in nepapan xochitl* „und dann (am Mittag, wenn sie die Sonne den toten Frauen übergeben haben), zerstreuen sie sich und gehen überall den Honig der verschiedenen Blüten saugen“.²⁾ — Denn die Seelen der toten Krieger, die ihren Dienst bei der Sonne gethan — *niman ic mocuepa, tlacototome, huitziltli, xochitototl, totocoztli, micettilcomolo, tiçapapalotl, ivipapalotl, xicalteonpapalotl, tlachichina in ompa in ononoian yoan in nican tlalticpac oalhui in quivalchichina, in iequich nepapan xochitl, in equimtl, anoco tzompanquavatl, xiloxochitl, tlucoxiloxochitl* — verwandeln sich in Schmuckvögel, in Kolibri, Blumenvögel, gelbe Vögel mit schwarzer Grube um die Augen (d. h. mit der Bemalung des Morgensterns), in weisse Kreideschmetterlinge, in weisse Daunenfederschmetterlinge in Schmetterlinge gross wie Trinkschalen. Sie saugen (den Honig der Blüten) dort an ihrem Aufenthaltsorte (im Himmel) und sie kommen zur Erde hernieder, an allen Arten von Blüten zu saugen, an Erythrina-Blüten, an Carolina princeps- und an Calliandra-Blüten.“³⁾ — Als Verkleidung des Feuergottes aber ist dieser Schmetterling im *Tonalamatl* der Aubin'schen Sammlung gezeichnet, weil der Feuergott der *Ueueotl*, der alte Gott, der erste Mensch, und der Repräsentant der Vorfahren, der Alten, der Gestorbenen, der im Kriege gefallenen, der geopfert Helden ist.

Nicht ganz so klare Beziehungen liegen für die Nachmittagsstunden vor.

8. Die erste Nachmittagsstunde würde in der Reihe der dreizehn Götter (Abb. 298, 299) durch das Bild *Tlaloc's*, des Regengottes, bezeichnet sein und in der Reihe der dreizehn Vögel durch das Bild eines Adlers, dessen Gefieder nicht schwarz, sondern in queren Streifen braun und weiss gezeichnet, im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) ausserdem mit einer Art Determinativ, einem grossen Steinmesser versehen ist. Offenbar ist der von Sahagun und Hernandez *itzquauhtli* „Obsidianmesseradler“ genannte Vogel gemeint, der als ein Adler mit gestreiftem oder gebändertem Gefieder beschrieben wird. Im *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) aber ist er die Verkleidung *Tlaloc's*, d. h. also desselben Gottes, der auch in der Reihe der dreizehn Götter die achte Tagesstunde oder die erste Nachmittagsstunde bezeichnen würden. Hier hat wohl die Idee zu Grunde gelegen, dass die täglichen Regengüsse der Regenzeit in den Nachmittagsstunden einzusetzen pfiegen.

9. Die neunte Tagesstunde, die zweite Nachmittagsstunde zeigt uns in der Reihe der dreizehn Götter (Abb. 298, 299) das Bild *Quetzalcouatl's* des Windgottes, des Gottes des Lebens, des Priester-gottes. Der Vogel dieser Tagesstunde ist *ueuolotl* oder *chalchiuhtotolin* der Truthahn, der vermuthlich hier für *Quetzalcouatl* eintritt, weil dieser Vogel, den wir als Herrn des achtzehnten Tageszeichens und des siebzehnten *Tonalamatl*-Abschnittes kennen gelernt haben, den Mexikanern das *chalchiuhatl* das „Edelstein-

1) P. Lizana.

2) Sahagun, Buch 6, cap. 29.

3) Sahagun, Buch 3, Appendix, Kap. 3.

Seler. Codex Borgia II.

wasser“, d. h. das Blut, das sich die Priester bei ihren Kasteiungen entzogen, verkörperte. Im *Tonalamatl* der Aubin'schen Sammlung erscheint dieser Vogel auch als Verkleidung *Tlaloc's*, des Regengottes, wie der der vorhergehenden achten Tagesstunde.

10. Die zehnte Tagesstunde, die dritte Nachmittagsstunde, wäre in der Reihe der dreizehn Götter (Abb. 298, 299) durch das Bild *Tezcatlipoca's*, in der Reihe der dreizehn Vögel (Abb. 296) durch *chiquätli*, das Käuzchen, verkörpert, das in dem *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) als Verkleidung desselben Gottes, *Tezcatlipoca's*, dargestellt ist. Es muss dieser Gott demnach hier die dem Untergange nahe Sonne vorstellen. Das Bild ist für mich mit eine Veranlassung gewesen, dass ich mir *Tezcatlipoca* immer als die untergehende Sonne vorgestellt habe. Andere Erwägungen haben mich, wie ich oben mehrfach erwähnt habe, neuerdings dazu geführt, in *Tezcatlipoca* vielmehr den am Abendhimmel erscheinenden Mond zu erkennen. Es liegt vielleicht das gleiche Verhältniss vor, wie bei *Quetzalcouatl* und dem Morgensterne. *Quetzalcouatl*, der abnehmende, in den Strahlen der Morgensonne sterbende Mond verwandelt sich in den Morgenstern, der zu der gleichen Zeit aufgeht. *Tezcatlipoca*, die untergehende Sonne, verwandelt sich in den zum ersten Male, dem Horizonte nahe, am Abendhimmel erscheinenden Mond.

11. Die elfte Tagesstunde wäre darnach in der Reihe der dreizehn Götter (Abb. 298, 299) durch eine Art Todesgott bezeichnet. Hier ist es also schon dunkel. In der Reihe der dreizehn Vögel steht *alo*, die rothe (Guacamaya oder der Arara, der Vogel des Feuergottes. Im *Tonalamatl* der Aubin'schen Sammlung ist dieser Vogel die Verkleidung desselben als rother (*tlatlauhqui*) *Tezcatlipoca* gemalten, mit einem Scheitelfederkämme versehenen Gottes, wie der der dritten Tagesstunde, d. h. *Xochipilli's* oder *Macuil xochitl's*, der rothen Götter, die die Sonne in Vogelgestalt, also wohl auch geradezu den Arara, oder das Feuer, vorstellen. Es ist demnach, wie es scheint, das erlöschende Feuer gemeint. Man mag sich vorstellen, wie ich oben schon angab, dass die dritte Morgenstunde, die Stunde vor Sonnenaufgang, die Morgendämmerung oder die Morgenröthe, diese zwölfte Tagesstunde, die Stunde nach Sonnenuntergang, die Abenddämmerung oder die Abendröthe bezeichnen solle.

12. In der zwölften Tagesstunde würde nunmehr in der Reihe der dreizehn Götter (Abb. 298, 293) *Tlauizcalpantecutli*, der Gott des Planeten Venus stehn. Es wäre natürlich der Abendstern, der nachdem die Sonneuntergegangen ist, am Abendhimmel sichtbar wird. Als sein Vertreter, und als Vertreter der zwölften Tagesstunde erscheint unter den Vögeln (Abb. 296) der Quetzalvogel (*quetzaltototl*), der in dem *Tonalamatl* der Aubin'schen Sammlung (Abb. 297) als eine Verkleidung des Maisgottes (*Cinteotl*) sich darstellt.

13. Die dreizehnte Tagesstunde endlich wäre durch das Bild der Nachtgöttin, der Göttin des Sternhimmels (*Citlalicue*), bezeichnet. Als ihr Vertreter ist in der Reihe der Vögel der bunte Papagei (*cocho*) gezeichnet, der seinerseits wiederum, im *Tonalamatl* der Aubin'schen Sammlung als Verkleidung der Göttin *Xochiquetzal* erscheint, — entweder, weil diese Göttin mit *Tonacaciuatl*, der Herrin der Lebensmittel, der Herrin der Geburt, also mit den in dem obersten dreizehnten Himmel, im Sternhimmel, residirenden Gottheiten zusammenfällt, oder weil es das Gestirn der Nacht, der in vollem Glanze scheinende Mond ist, der in dieser Göttin seine Verkörperung gefunden hat.

Überblicken wir nun noch einmal diese beiden Reihen, so ist klar, dass zwar der Mittag deutlich markirt ist, der Anfang und das Ende dieser beiden Reihen aber sich in den Stunden der Dämmerung, oder geradezu der Nacht verlieren, die dem Aufgange der Sonne vorhergehen und ihrem Untergange folgen. Ich habe daher in meiner Erläuterung des *Tonalamatl's* der Aubin'schen Sammlung die Vermuthung geäußert, dass für die Stunden des Tages ursprünglich und eigentlich auch nur neun einzusetzen seien, wie für die Stunden der Nacht, dass man aber am Morgen und am Abend zwei weitere hinzugefügt habe, die Stunden des noch nicht ganz erschienenen und des noch nicht ganz erloschenen Lichtes, um dadurch auf die Zahl Dreizehn zu kommen, die der Neunzahl gegenüber die lichten Götter und die lichte Seite des Daseins bezeichnet, die Zahl der Himmel oder der himmlischen Regionen gegenüber der Neunzahl der Unterwelten und der irdischen Regionen.

Die Sache scheint aber doch noch etwas anders zu liegen. Da wir den Sonnenaufgang am Beginn der vierten, den Sonnenuntergang am Ende der zehnten Stunde anzusetzen haben, so würden wir, falls es sich wirklich hierbei um gleichwerthige Abschnitte oder Stunden gleicher Dauer handelt, auf den astronomischen Tag, oder die Zeit von Mitternacht zu Mitternacht kommen, als die Zeit, die

durch diese dreizehn Götter und die dreizehn Vögel veranschaulicht wäre. Und dann müsste wohl der Gegensatz zu den neun Herren der Nacht in einer anderen Richtung liegen. In Wirklichkeit sind eben doch die dreizehn Götter und die dreizehn Vögel nur analoge, nicht homologe Reihen. Die neun Götter, sind die Erdregionen (die Herren der nach vier Richtungen sich breiten Erde), die mit dem Feuergotte, dem Herren der Mitte beginnen. Die dreizehn Götter entsprechend die dreizehn Himmel, die Herren des über der Erde sich aufbauenden Raumes, die ebenfalls mit dem Feuergotte, als dem *tlalticpaquē*, dem Herren der Erdoberfläche, beginnen. Die dreizehn Vögel aber und ihre Götter sind die Herren des astronomischen Tages, der Zeit von Mitternacht zu Mitternacht, in der nach einander die hier auf unserem Codex Borgia-Blatte dargestellten Lichtkörper — Mond, Morgenstern und Sonne und wiederum Abendstern und Mond, — am Firmamente erscheinen.

25. Die vier Federschlangen.

(Blatt 72 = Kingsborough 43.)

Auf diesem Blatte, dem das Blatt 73 (= Kingsborough 24) des Codex Vaticanus 3773 (Abb. 300) entspricht, sieht man vier die Quadranten umklammernde Schlangen, die durch den Federbusch, den sie sämtlich auf der Schnauzenspitze und dem Schwanzende haben, als Federschlangen, d. h. als Vertreter oder — genauer gesagt — als Verkörperungen oder Erzeuger des Wassers, gekennzeichnet sind. Während in unserer Handschrift die Köpfe dieser Schlangen, wie gewöhnlich, in Profilansicht gezeichnet sind, sind sie im Vaticanus (Abb. 300) in merkwürdiger Weise en face genommen, so dass die obere Rachenbegrenzung fast eine der halbmondförmigen Nasenplatten, wie sie die Pulquegötter und die *Tlaçolteotl* tragen, vortäuscht. Dabei sind den Augenbrauen langgestielte Augen aufgesetzt, die fast wie Schneckenfühler aussehen und das en face-Gesicht noch merkwürdiger machen. Solche den Augenbrauen aufgesetzte Gesichter kenne ich auch bei anderen Figuren. Sie vervollständigen gewissermassen das einfache Auge zu einem zusammengesetzten dreitheiligen Strahlauge, das als Abbild oder Zeichen der Sterne in den Himmelsbildern gezeichnet wird. Das Schwanzende der Schlangen zeigt die Form der Schwanzklappen der Klapperschlange, ist aber im Vaticanus noch mit Augen besetzt, wodurch es als dunkles oder die ganzen Schlangen vielleicht als himmlische bezeichnet werden. Sowohl auf unserem Codex Borgia-Blatte, wie in den Bildern des Vaticanus (Abb. 300), sind die vier Federschlangen nach Art eines Hakenkreuzes angeordnet und um ein die Mitte einnehmendes *tzitzimül*-Gesicht, das Abbild eines von oben herunterkommenden, die Richtung von oben nach unten, d. h. also die fünfte Weltgegend oder die Mitte bezeichnenden Dämons, gruppiert, müssen also selbst die vier Hauptquadranten oder die Himmelsrichtungen Osten, Norden, Westen, Süden bezeichnen. Sie umschliessen in unserer Handschrift jede eine Göttergestalt, die jede von fünf (um je vier Zeichen von einander abstehenden) Tageszeichen umsetzt ist; im Codex Vaticanus (Abb. 300) aber ist in dem von der Schlange abgeschlossenen Raume nur je ein Tageszeichen zu sehen, das erste der fünf, die auf unserem Codex Borgia-Blatte in jedem der vier Quadranten angegeben sind. Durch diese Tageszeichen wird, als dem Anfange der Reihe, dem Osten, gehörig, in unserer Handschrift der linke untere, im Vaticanus (Abb. 300) der rechte obere Quadrant bezeichnet. Und der Fortgang geschieht dann, wie gewöhnlich, in einem der Drehung des Uhrzeigers entgegengesetzten Sinne. Vor den Göttergestalten ist endlich in unserer Handschrift noch je ein Räucher- oder Feuergefäss angegeben, in dem verschiedene der Natur oder der Himmelsrichtung des Quadranten entsprechende Symbole oder Gegenstände zu sehen sind.

Die erste Federschlange, die des Ostens, die in unserer Handschrift den linken unteren Quadranten, im Codex Vaticanus (Abb. 300) den Quadranten der rechten oberen Ecke umzieht, ist in unserer Handschrift deutlich als *Quetzalcouatl*, als grüne Quetzalfederschlange, gezeichnet. Im Codex Vaticanus (Abb. 300) ist sie ebenfalls grün gemalt, aber der Kopf und die Schwanzfedern sind roth; die letzteren sind augenscheinlich als Ararafedern gedacht; der Leib endlich ist, ausser mit spärlichen grünen, sich kräuselnden Federn noch mit Steinmessern und Feuerzungen besetzt, offenbar um dadurch den Osten

als das *Tlatlayan*, den Ort des Brennens und das Haus der Strahlenscheibe, der Sonne, zu kennzeichnen. Das Zeichen, das dieser Himmelsrichtung entspricht, ist das Anfangszeichen des Kalenders, *cipactli* „Krokodil“, und der Gott, der hier der Ausdruck dieser Himmelsrichtung ist, *Tlaloc*, der Regengott. Denn durch die vier Federschlangen soll offenbar das Wasser oder der Regen, der nach dem Glauben der Mexikaner auch nach den Himmelsrichtungen verschieden ist, bezeichnet werden. Der Regengott ist aber hier auf unserem Codex Borgia-Blatte nicht ganz in der gewöhnlichen Weise dargestellt. Er ist grün, und Füße und Hände jaguarfellfarben gemalt; das Gesicht *Quetzalcouatl*-artig von einem langen, feuerfarbenen Barte umrahmt, und das schwarze Haar züngelt über der Stirn in drei Locken auf. Das ist eine Besonderheit, die sonst die Sterngötter oder Lichtwesen kennzeichnet, die wir aber ebenso bei *Tlaloc*, der Verkörperung des siebenten Tageszeichens *maçatl* „Hirsch“, (des Zeichens des Feuers), und bei dem *Tlaloc*, der als zweiter (dem Süden entsprechend) in der zweiten Reihe der viermal fünf Hüter der Venusperioden genannt ist, angetroffen haben. — Vor dem Regengotte steht in dem Ostquadranten

Abb. 300. Die vier Federschlangen.
Codex Vaticanus 3773, Blatt 73 (= Kingsborough 24).

unseres Codex Borgia-Blattes ein Räuchergefäß, in dem nichts weiter als eine Kautschukugel (*Oltelotli*) mit einer einzelnen aufgebundenen Quetzalfeder — einem sogenannten *miauoyotl* — zu sehen ist. Das ist das übliche Opfer, das man den Regengöttern brachte.

Von den fünf Tageszeichen, die in unserer Handschrift die Gestalt des Regengottes umsäumen, ist das erste *cipactli* unter dem Fusse des Gottes angegeben. Das sahen wir so auch auf den Blättern 17 und 53 unserer Handschrift, wo ebenfalls Göttergestalten, von Tageszeichen umgesetzt, abgebildet sind. Denn *cipactli*, der „Fisch, aus dem der *Tlaltecutili*, die Erde, gemacht“ wurde, ist eben der Boden, auf den man tritt. — Von den anderen Zeichen ist das nächste (fünfte), *couatl* „Schlange“, mit dem Ohre des Gottes verbunden, vielleicht um die Gegend zu bezeichnen, aus der man, durch Einschneiden, sich das Blut entzog, das kostbare Wasser, durch das der Schmutz der Sünde hinweggenommen wurde. Das neunte Zeichen, *atl* „Wasser“, steht an der Hand des Gottes, offenbar, weil er der Wasserspender ist. Das drei-

zehnte Zeichen *acatl* „Rohr“ an dem Auge des Gottes, vielleicht um gleichzeitig an das Feuerbohren und das Ausbohren des Auges, das Symbol der Selbstpeinigung, zu erinnern. Das siebzehnte Zeichen endlich *olin* „Bewegung“ ist mit dem Munde *Tlaloc*'s verbunden, vielleicht weil seine Stimme der rollende Donner ist.

Die zweite Schlange, die dem Norden entspricht, ist in unserer Handschrift in dem rechten unteren Quadranten, im Vaticanus (Abb. 300) in dem linken oberen Quadranten dargestellt. Es ist in unserer Handschrift eine bunt und nach Art der Korallenotter gemalte und gezeichnete Schlange, ein *tlapalcouatl*, eine Blutschlange, und das ist auch wohl die Art, die dieser Himmelsrichtung und ihrer Gottheit entspricht. Denn diese Gottheit ist *Tlaqloteotl*, die Göttin des Unraths, die Mondgöttin, die wir immer mit der rothen, bezw. bunten, nach Art der Korallenotter gezeichneten Schlange verbunden ange-
troffen haben. Im Vaticanus (Abb. 300) scheinen aber die Schlangen der zweiten und der dritten Richtung vertauscht zu sein. Denn bei dem Norden steht dort die blaue Schlange, die, wie wir sehen werden, dem Westen angehört; und bei dem letzteren die bunte Blutschlange, die der Codex Borgia im Norden hat. Die Schwanzfedern der beiden Schlangen des Vaticanus scheinen dabei die richtige Farbe zu haben, da diese bei der (blauen) Schlange des Nordens verschiedenfarbig, bunt, bei der (bunten) Schlange des Westens einfach blau sind. — Als Göttin dieser Richtung ist in dem von der Schlange des Nordens umschlossenen Raume, wie ich schon angab, *Tlaqloteotl*, die Göttin des Unraths, die Mondgöttin, gezeichnet. Sie sitzt, gleich den *Ciuapipiltin*, die ihre Abbilder sind, *omaxac* auf dem Kreuzwege. Sie ist nackt, nur mit ihrer Kopfbinde (*ichcaxochitl*), einem Halskragen, ihrem Ohrpflocke und dem goldenen Nasenhalbmonde (*teocuitla-yacametzli*) bekleidet und mit faltigem Bauche, der sie als die Geborenhabende kennzeichnet. In dem Räuchergefäße vor ihr sieht man Brennholz und das Schwanzende einer Blutschlange, — ein Feueropfer, das wir in der gleichen Weise in dem dritten *Tonalamatl*-Viertel auf dem Blatte 6 unserer Handschrift bei dem Tage „Sieben Rohr“ angegeben fanden.

Von den fünf Tageszeichen, die die Gestalt der Göttin umsäumen, ist das eine — das zweite Tageszeichen, *eccatl* „Wind“ — kurioser, aber verständlicher Weise mit dem Anus der Göttin in Verbindung gebracht. Das folgende, das sechste Zeichen, *miquiztli* „Tod“, mit dem Kreuzwege. Das nächste, das zehnte Zeichen, *itzcuintli* „Hund“, mit dem Munde, weil Feuer aus ihrem Munde geht. Vielleicht sind auch die scharfe Zunge, die spitzen Reden der Weiber oder unfläthige Worte gemeint. Das vierzehnte Tageszeichen, *ocelotl* „Jaguar“, ist mit dem Ohre, das achtzehnte, *tecpatl* „Feuersteinmesser“, mit dem Auge verbunden. Für beides weiss ich keinen plausiblen Grund.

Die dritte Schlange, die den Westen bezeichnet, umschliesst in unserer Handschrift den rechten oberen, im Vaticanus (Abb. 300) den linken unteren Quadranten. Die Schlange ist in unserer Handschrift mit blauer Farbe, in der Farbe des Türkises (*xiuhtli*) oder des Kotinga-Vogels (*xihuatotl*), und als Federschlange gezeichnet und längs des Rückens mit blaugemalten Wurfbrettern (*xihuatlatl*) und Speeren (*tlacochtili*, *mitl*) besetzt. Offenbar, weil die blaue Farbe durch Ideenassoziation die Vorstellung des *xihuatlatl*, des blauen Wurfbrettes, der Waffe des Feuergottes, *Uitzilopochtli*'s und auch *Quetzalcouatl*'s des Gottes von *Tollan*, erweckte, oder richtiger wohl, weil der *xihucouatl*, die blaue Schlange, die Feuer-
schlange ist, die die Verkleidung der genannten Götter und zugleich auch ihre mit dem *xihuatlatl* identifizierte Waffe ist. — Auf dem Blatte des Vaticanus (Abb. 300) ist als Parallele dieser Schlange nicht die dort als dritte, als Schlange des Westens, stehende bunte Blutschlange, sondern die blaue Schlange anzusehen, die der Schreiber in dem zweiten Quadranten, dem des Nordens, gezeichnet hat. Der Leib dieser Schlange ist durch die gitter- oder netzartig sich kreuzende Linienzeichnung als mit Mosaik inkrustirt bezeichnet, — die übliche Art, in der die kleinen Türkisstückchen verwendet wurden. An der Aussenseite des Leibes erheben sich blaue Flammenzungen. Die Innenseite ist mit in einander geschlungenen Binsen- oder *malinalli*-Streifen besetzt. Das ist wohl ein Ausdruck des *neçaualli* oder des Fastens und ein Hinweis auf den Gott, der in unserer Handschrift in dem dritten Quadranten, dem Quadranten des Westens, angegeben ist, auf *Quetzalcouatl*, der der Windgott, der Gott des Lebens und zugleich der Priestergott, der Erfinder alles Kultus und aller Kasteiung, ist. Auf den Priestergott, den Erfinder der Kasteiung, deuten auch der Knochendolch (*omitl*) und die Agave-Blattspitze (*uitzli*), die man in unserer Handschrift in dem Räuchergefäße vor *Quetzalcouatl*, dem Gotte des dritten Quadranten,

stecken sieht, sowie die Edelsteinscheiben, die an der Spitze der beiden Kasteiungswerkzeuge stehen und das ganze Räuchergefäß umsäumen und die, gleich den Blüten, die sonst an der Spitze der Kasteiungswerkzeuge angebracht werden, das Blut, das Opfer, bezeichnen. Der Maiskolben (*cintli*) dagegen, der zwischen dem Knochendolche und der Agave-Blattspitze in dem Räuchergefäße zu sehen ist, ist eine Kennzeichnung des Westens, der das *Tamoanchan*, das Haus der Geburt, und das *Cincalco*, die Heimath des Mais, ist.

Von den fünf Tageszeichen, die in dem Umkreise der Figur *Quetzalcouatl's* angegeben sind, ist das erste, das dritte Zeichen, *calli* „Haus“, mit dem Munde des Gottes verbunden. Das nächste, das siebente Zeichen, *maçatl* „Hirsch“, steht unter dem Fusse des Gottes. Das folgende, das eilfte Zeichen, *oçomàtli* „Affe“, ist mit dem Herzen des Gottes verbunden, denn der Windgott und der Affe sind wesenseins. Die beiden letzten Zeichen, das fünfzehnte, *quauhtli* „Adler“, und das neunzehnte, *quiauitl* „Regen“, sind wieder mit den Ohren und dem Auge des Gottes verbunden.

Die vierte Schlange endlich, die den Süden repräsentirt, im Codex Borgia in dem linken oberen, im Vaticanus im rechten unteren Quadranten, ist in unserer Handschrift als Skelettwirbelsäule, zugleich aber in der grünen Farbe des *malinalli*-Grases gemalt und mit *malinalli*-Grasenden versehen, die gleichsam die Processus spinosi der Skelettwirbelsäule bilden. Im Vaticanus (Abb. 300) ist einfach eine Skelettwirbelsäule mit einem Totenschädel als Kopf gezeichnet, aber an der Aussenseite, der Bauchseite, sind auch federartig sich einrollende grüne Gebilde angegeben. Als Gott dieses Quadranten ist in unserer Handschrift der rothe *Auiateotl* des Südens, *Macuil xochitl*, der Gott „Fünf Blume“, der Gott der Lust, des Spieles, der Musik und des Tanzes, gezeichnet, aber mit derselben dunklen, zwei weisse Windkreuze in sich schliessenden Haarperrücke und dem Kopfschmucke des Regen- und Blitzgottes, wie der für *Xolotl* eintretende *Auiateotl* oder *Nanauatzin* auf dem Blatte 10 unserer Handschrift. In dem Räuchergefäße vor dem Gotte sieht man Scheite Brennholz und eine Kautschukugel mit der einzelnen aufgebundenen Quetzalfeder.

Von den fünf Tageszeichen, die auch hier im Umkreise angegeben sind, ist das erste, das vierte Tageszeichen *cuetzpalin* „Eidechse“ mit dem Penis verbunden. Ich habe bei Besprechung des Regenten des vierten Tageszeichens (vgl. Band I dieser Erläuterungen, S. 95 ff.) gezeigt, dass die Eidechse den Mexikanern das Zeichen der Unkeuschheit war, und wir haben das Zeichen auch in der grossen *Tezcatlipoca*-Figur, Blatt 17 unserer Handschrift, genau in derselben Weise mit dem Penis in Verbindung gebracht gesehen. Weil dieser vierte Tag den Mexikanern das Zeichen der Unkeuschheit war, darum hat man auch in diesen vierten Quadranten des Blattes *Auiateotl*, den Gott der Lust, gesetzt. — Das folgende Tageszeichen, das achte, *tochtli* „Kaninchen“, ist unter dem linken Fusse des Gottes angebracht; das zwölfte, *malinalli* „Grasstrick“, an dem Ohre des Gottes. Das sechzehnte, *cozcaquauhtli* der „Geier“, auf seiner Hand. Das zwanzigste endlich, *xochitl* „Blume“, ist mit dem Munde des Gottes verbunden. Das ist wiederum der Natur dieses Gottes angemessen, der ja die Blume repräsentirt, und dessen Genosse *Xochipilli* mit der Zeichnung eines Schmetterlings auf dem Munde, also geradezu als Blume, auf der der Schmetterling sich wiegt, gezeichnet wird.

Was die Bedeutung der gesammten Darstellungen dieses Blattes betrifft, so müssen wir, wie ich oben schon sagte, festhalten, dass die Federschlange den Mexikanern überall zunächst das Wasser bezeichnete. Und da kommt einem in die Erinnerung, was wir über *Tlaloc*, den Berg- und Regengott, in der „Historia de los Mexicanos por sus pinturas“ lesen¹⁾. Darnach, heisst es, hätte der Gott oben auf seinem Berge, in *Tlalocan* (im Osten von Tezcuco), eine Wohnung von vier Zimmern gehabt, und in der Mitte einen grossen Hof, wo vier grosse Fässer mit Wasser stehen. Das eine Wasser sei sehr gut, und aus dem regne es, wenn die Maiskolben und die Feldfrüchte gedeihen, und der Regen zu rechter Zeit komme. Das andere Wasser sei schlecht, wenn es regne und mit dem Regen Spinnweben (Pilzgewebe) an den Maiskolben entstehen, und sie sich schwärzen. Das dritte Wasser sei, wenn es regne, und die Maiskolben erfrieren. Das vierte, wenn es regne, und die Maiskolben kein Korn ansetzen und vertrocknen. — Diese

Beschreibung der verschiedenen Regenwasser entspricht offenbar den Himmelsrichtungen Osten, Westen, Norden, Süden, — deren Wirkungen mit Bezug auf den Regen man versucht sein könnte, auch auf den beschriebenen Blättern der beiden Handschriften der Codex Borgia-Gruppe dargestellt zu sehen. Eine solche Erklärung für die Blätter dieser Handschrift muthet einen aber doch etwas banal an. Auch würde man dabei nicht recht begreifen können, wozu hier in unserer Handschrift die verschiedenen Göttergestalten gezeichnet sind. Wir müssten annehmen, dass sie nur zur Kennzeichnung der Himmelsrichtung stehen, wozu sie gerade nicht nöthig wären. Ich habe oben (vgl. S. 259) für die eigentliche Federschlange eine andere mögliche Bedeutung nachgewiesen, eine hieroglyphische Verwendung zur Bezeichnung des Mondes. Doch scheint auch diese hier kaum angenommen werden zu können, da gerade der Gott, neben dem die Federschlange steht, *Tlaloc*, der Regengott, schwerlich mit dem Monde in Verbindung gebracht werden kann. Dagegen wird ein Vergleich mit den Abbildungen der letzten beiden Blätter unserer Handschrift, auf die ich im letzten Kapitel dieser Erläuterungen zu sprechen kommen werde, lehren, dass die vier Schlangen hier nur die Erscheinungsformen anderer Göttergestalten sind, die die vier grossen kosmischen Potenzen, Sonne, Mond, Morgenstern und Sternenwelt, in sich verkörpern.

26. Der Gott des Lebens und der Gott des Todes in der oberen oder himmlischen Region.

(Blatt 73 = Kingsborough 42.)

Ueber dies Blatt habe ich oben im 20. Kapitel (S. 165—169) schon gesprochen.

27. Die Götter der Wollust und ihre Zeichen.

(Blatt 74 = Kingsborough 41.)

Dies Blatt, das in dem Blatte 74 (= Kingsborough 23) des Codex Vaticanus 3773 (vgl. Abb. 302, 303) eine Parallele hat, ist leider in unserer Handschrift ziemlich zerstört. Zu Kingsborough's Zeit scheint es noch ein wenig besser erhalten gewesen zu sein. Ich habe die untere Hälfte des Blattes nach der Kingsborough'schen Zeichnung kopieren lassen und hier in Abb. 301 wiedergegeben, weil in der Kingsborough'schen Zeichnung einige wesentliche Kennzeichen der in dieser unteren Hälfte dargestellten Figur noch deutlich sind, die jetzt durch Abblätterung der Stuckschicht unrettbar verloren sind.

Wir sehen in der oberen Hälfte des Blattes *Tlaçolteotl*, die Göttin des Unraths, die Mondgöttin, die alte Erdgöttin, die die Göttin der Wollust und die grosse Gebärerin ist, nackt und breitbeinig, mit geöffneten Schenkeln, in einem Tempel sitzen. Das Dach des Tempels hat einen breiten First und an seiner Basis ist vorn das *tlapapalli*, die vier Farben, die wir auf der Decke *Macuil xochitl*'s (vgl. oben S. 268, Abb. 272) kennen gelernt haben und die das Zeichen der *Auiateteó*, der Göttin der Wollust, sind, angegeben. In der unteren Hälfte des Blattes sitzt in einem Tempel, dessen Dach herabgestürzt ist und der in Flammen steht, eine mit blauer Farbe gemalte männliche Gestalt, die augenscheinlich in der bekannten indianischen Unterwürfigkeitshaltung, mit nach hinten verschränkten Armen, dargestellt sein soll, und die, wenigstens in der Kingsborough'schen Zeichnung (Abb. 301), vom Mundwinkel nach hinten ziehend, die Zeichnung

Abb. 301. *Auiateotl*, der Gott der Lust und seine Zeichen.
Codex Borgia 74 (= Kingsborough 41), untere Hälfte. Nach der Zeichnung im Werke Kingsborough's wiedergegeben.

Abb. 302. *Tlaçolteotl*, die Göttin des Unraths, und ihre Zeichen.
Codex Vaticanus 3773 Blatt 74 (= Kingsborough 23).

Abb. 303. *Auiateotl*, der Gott der Lust, und seine Zeichen.
Codex Vaticanus 3773, Blatt 74 (= Kingsborough 23).

einer weissen Hand aufweist, also als *Auiateotl*, als Gott der Lust, gekennzeichnet ist. Das Schwanzende einer nach Art der Korallenotter gezeichneten bunten Schlange steigt hinter seinem Rücken in die Höhe, die gewissermassen dem *tlapapalli*, dem Zeichen der *Auiateteó* bei der *Tlaçolteotl*, zu vergleichen ist, da es hier das Zeichen der Sünde, das kennzeichnende Begleitbild der *Tlaçolteotl*, bei dem *Auiateotl* vorführt. — Die Parallelbilder des Vaticanus (Abb. 302, 303) zeigen im Wesentlichen die gleichen Gestalten, nur dass bei dem hier auch mit blauer Farbe gemalten *Auiateotl* keine weisse Handzeichnung am Munde zu sehen ist und dass bei ihm das Zeichen der Sünde, das Schwanzende der bunten Schlange, das in der Codex Borgia-Gruppe hinter dem Rücken gerade aufstieg, hier gewissermassen als Zopfband verwendet ist.

Die beiden Götter sind auf den Blättern beider Handschriften von den Zeichen der zwanzig Tage umgeben. Diese haben aber, wie die erklärende Tafel ohne Weiteres veranschaulicht, augenscheinlich einzig den Zweck, auf die beiden letzten Zeichen *quiauitl* „Regen“ und *xochitl* „Blume“ hinzuführen, die in der oberen Abtheilung mit der Analöffnung und der Vulva der Göttin, in der unteren mit der Analöffnung und dem Penis des männlichen Gottes in Verbindung gesetzt sind.

28. Die vier Lichtgötter und ihre Erscheinungsformen.

(Blatt 75, 76 = Kingsborough 40, 39.)

Die beiden letzten Blätter unserer Handschriften sind diejenigen, die am meisten unter der schlechten Behandlung, die Unverstand und Nachlässigkeit dieser schönsten aller mexikanischen Handschriften zu Theil werden liess, gelitten haben. Von den acht Bildern, die auf diesen zwei Blättern dargestellt waren, ist durch das Ansengen oder Anbrennen, für das Alexander von Humboldt die gedankenlose und nichtsnutzige Spielerei der Domestikenkinder der Familie Giustiniani verantwortlich macht, eines total und rettungslos zerstört, und von einem zweiten sind nur ein paar traurige Reste übrig, aus denen sich nicht viel entnehmen lässt. Und zwei andere Bilder haben durch die Abreibung, die naturgemäss die äusseren Blätter eines Buches stärker als andere trifft, auch beträchtlich gelitten, so dass nur die vier mittleren Bilder die Einzelheiten des Dargestellten ziemlich vollständig erkennen lassen.

Von diesen acht Darstellungen, für die noch keine Parallelen in anderen Bilderschriften nachgewiesen sind, sind durch die beigesetzten Tageszeichen, von denen die kleinere Hälfte noch deutlich zu erkennen, die übrigen mit Sicherheit zu ergänzen sind, immer je zwei einem Viertel des in fünfgliedrige Säulen geordneten *Tonalamatl*'s, und damit einer der vier Himmelsrichtungen zugeschrieben. Denn es ist immer die erste und die achte Tageszeichensäule der vier *Tonalamatl*-Viertel, die als Begleiter und Determinativ bei den vier Paaren von Darstellungen stehen.

In allen acht Abtheilungen befindet sich an der einen Seite, der Eingangsseite, das Hauptbild, — eine Gottheit auf einem *teoicpalli*, einem aus Holz geschnitzten, mit Edelsteinen eingelegten und mit Metall beschlagenen Stuhle, kniend. Auf der anderen Seite oben, dem Gotte gegenüber, sieht man die kleine Figur eines Räucherpriesters (*tlenamacac*) knien. Die eine Hand hält den Räucherlöffel (*tlemaitl*), der mit dickem schwarzem Rauche gefüllt ist, und in dem ein Edelstein, der in eine Blüthe endet, die Kostbarkeit, d. h. das Opfer, zum Ausdrucke bringt. Die Tasche für das Räucherwerk (*copalxiquipilli*) hängt an dem anderen Arme. Und die zu diesem anderen Arme gehörige Hand führt mit kräftigem Stosse ein Obsidianmesser (*itzli*) in das Ohr. Das aus der Wunde strömende Blut steigt gerade in die Höhe und geht quer über die Abtheilung fort und in den Mund der Gottheit auf der anderen Seite des Faches über. Der Gott trinkt also das Blut, das der Räucherer, der Fromme, aus der Wunde, die er sich beigebracht hat, fliessen lässt. Diese Gottheiten selbst scheinen sich in zwei Klassen zu sondern.

Die eigentlichen Vertreter der vier Himmelsrichtungen scheinen jedes Mal die zweiten Glieder der vier Paare zu sein, zu denen die ersten Glieder nur ergänzende Gestalten bilden. Bei zwei der Himmelsrichtungen wird dieses ergänzende Glied von einer Todesgottheit gebildet, während in der ersten Himmelsrichtung, dem Osten, dafür der Regengott *Tlaloc* erscheint. Den zweiten Gliedern der vier Paare gegenüber, unter dem *tlenamacac*, scheint überall noch ein Symbol angegeben gewesen zu sein, das die Natur oder einige Seiten der Natur, der betreffenden Gottheit veranschaulicht. Und zwischen diesem Symbole und der Gottheit steht dann noch ein weisses Gefäss mit einem Feueropfer. Bei den ersten Gliedern der vier Paare ist, der Hauptfigur gegenüber, unter dem *tlenamacac* nur das weisse Gefäss mit dem Feueropfer zu sehen. Und nur das erste Glied des ersten Paares macht wieder eine Ausnahme, indem hier, dem Regengotte gegenüber, über dem Gefässe mit dem Feueropfer noch ein Edelsteingefäss mit Maiskolben gezeichnet ist, das offenbar als Charakterisirung der Natur oder der Wirkung der gegenüberstehenden Hauptfigur, des Regengottes, gedacht ist.

Die Hauptfigur des zweiten Gliedes, des ersten, den Osten (*tlapcopa*) bezeichnenden Paares (Blatt 75 unten links) ist *Tonatiuh*, der Sonnengott. Er ist als rother Gott dargestellt, mit der Sonnenscheibe als Halskragen. Das feuerfarbene Haar ist von dem mit einer Edelsteinscheibe verzierten Riemen umwunden, der an der Stirnseite einen stylisirten Vogelkopf (Adlerkopf) trägt, während an den Seiten je zwei kurze, in Daunenfederbälle endende Edelsteinriemen hervorragen. Auf dem Scheitel hat er die Adlerfederkrone, aus der drei haarig begrenzte Streifen heraushängen, — der charakteristische Schmuck des Sonnengottes in unserer Handschrift. In der einen Hand hält der Gott das blaue Wurf Brett (*xihuatlatl*), in der anderen Schild und Speerbündel. — Dem Gotte gegenüber, unter dem *tlenamacac*, ist ein Berg gezeichnet, der eine Blüthe auf seiner Fläche zeigt, also ein *xochitepetl*. Auf seiner Spitze liegen Schild, Speerbündel und Handfahne, die Werkzeuge des Krieges (*yaoyotl*), und Wasser rinnt auf der einen, ein Strom gelber Federn auf der anderen Seite herab, die zusammen das *atl-tlachinolli* ergeben, die metaphorische Bezeichnung und die Hieroglyphe des Krieges. — In dem weissen Feuergefässe, das zwischen diesem Berge und dem Sonnengotte am Boden steht, ist nur eine Kautschukugel (*oltelolotli*) mit der einzelnen aufgebundenen Quetzalfeder (*miauayotl*) zu sehen.

Die Hauptfigur des zweiten Gliedes des zweiten, den Norden (*mictlampa*) bezeichnenden Paares (Blatt 76 unten links) ist *Tlaçolteotl*, die Mondgöttin. Sie ist hier mit ihrer gewöhnlichen, die Mundpartie bedeckenden schwarzen *tlalocpintitac*-Bemalung, mit einem rothen *tlaxapochtli* auf der Backe, mit feuerfarbenem, über der Stirn in zwei Locken aufzüngelndem Haare, mit ihrem *yacametzli* in der Nase, ihrer Baumwollkopfbinde (*ichcaxochitl*) und ihrem Baumwollohrpflock (*ichcanacochtli*) und dem Truthahnflügel am Nacken dargestellt, aus dem die gelben (*çoyatl*-)Federn herausragen. Sie trägt endlich den kammförmigen, blau und weiss gebänderten Brustschmuck, der ihr und den Pulquegöttern gemein ist. Aber, wie auf dem Blatte 68 unserer Handschrift, wo *Tlaçolteotl* als Regentin des vierzehnten *Tonalamatl*-Abschnittes erscheint, ist nicht nur ihr Gewand, ihre Enagua (*cueitl*), sondern auch ihre Krone, *chictlapanqui*, schwarz und roth, in der Zweifarbigkeit der Pulquegötter und mit dem goldenen Nasenhalbmonde der Pulquegötter auf der Trennungslinie des schwarzen und des rothen Feldes, gemalt. Der untere Saum ihres Gewandes ist blau (granulirt) und mit weissen Muschelscheiben besetzt. Das ist das *ciñlalcueitl*, die „Sternhimmel-Enagua“, der *Tlaçolteotl* und der *Ciuateteó*, das wir auf dem Blatte 38 unserer Handschrift kennen gelernt haben, der rasselnde Besatz von Muschelscheiben, die für Augen, d. h. für Sterne, stehen. In der einen Hand scheint die Göttin ein Brennholzbündel, in der anderen einen Besen (*çacatl*, *popotl*), zu halten. Vielleicht ist auch beides als diese Waffe der Göttin des *Ochpaniztli*-Festes, als Besen, gemeint. — Der Göttin gegenüber ist ein Berg abgebildet, auf dem man einen Kreuzweg (*omaxatl*) und auf ihm liegend einen Besen (*popotl*) gerade noch erkennen kann. — In dem Feuergefässe, das zwischen diesem Berge und der Göttin stand, scheint eine grosse Kopalmasse, oder so etwas ähnliches, gezeichnet gewesen zu sein. Das Ganze ist aber jetzt nicht mehr zu erkennen.

Die Hauptfigur des zweiten Gliedes des dritten, den Westen (*ciuatlampa*) bezeichnenden Paares (Blatt 76 oben rechts) ist *Tlauizcalpantecutli*, der Gott des Planeten Venus. Er ist, wie auf den Blättern 45 und 54 unserer Handschrift weiss und roth gestreift (*tlauauantli*), auf den Armen mit Daunenfederbällen auf schwarzem Grunde, d. h. *cicillalló* „sternhimmelartig“, bemalt und hat einen weissen Schädel als Kopf,

auf dem ein Quincunx weisser Flecke nicht erkennbar ist. Auf dem rothen Lederriemen, der das feuerfarbene Haar umwindet, sind die beiden weissen, an der Spitze roth gefärbten, spitz eiförmigen Platten deutlich, die die Besonderheit dieses Gottes ausmachen. Die Krone ist durch das Ansengen zerstört, aber das kurze über den Rücken hängende *quemil* zeigt die mit weissem Endfleck versehenen schwarzen Truthahnschwanzfedern, die der Gott des Planeten Venus in seiner Krone und seinem *quemil* trägt. Der Ohrpflock ist der weisse *amanacochtli*, der Brustschmuck der weisse Ring *anauatl*, das Abbild des Auges, der Brustschmuck *Tezcatlipoca*'s. Die Schambinde (*maxtlatl*) ist weiss und mit spitzwinkligen Figuren bedruckt (*tlaitzcopintli*), wie das Gewand der *Ciutateteô* des Sahagun-Manuskriptes. Der Gott hält, gleich dem Sonnengotte in dem ersten, dem östlichen Viertel das blaue Wurf Brett (*xiuhatl*) in der einen, Schild, Speerbündel und Handfahne in der anderen Hand. Und wie vor dem Sonnengotte des ersten östlichen Viertels steht auch vor *Tlauizcalpantecutli* ein Berg, der eine Blume auf seiner Fläche trägt, ein *xochitepetl*; auch auf ihm ruhen die Werkzeuge des Krieges, Schild, Speerbündel, Wurf Brett und Handfahne, und darunter rinnt das *atl-tlachinolli*, der Wasserstrom auf der einen, der Strom gelber Federn auf der anderen Seite herab, nur dass dieser Strom gelber Federn hier ganz wasserartig, mit gelben Scheiben an den Theilstromenden gezeichnet ist. — Das Feuergefäss, dass zwischen diesem *xochitepetl* und dem Gotte am Boden steht, enthält, wie bei dem Sonnengotte, auch nur eine einzige Kautschukugel mit ihrer einen darauf gebundenen Quetzalfeder.

Die Hauptfigur des zweiten Gliedes des vierten, den Süden (*uitztlamp*) bezeichnenden Paares (Blatt 75, oben rechts) ist leider durch den Brand vollständig zerstört. Das ist sehr traurig. Denn da wir in dem ersten, dem östlichen Viertel den Sonnengott, im zweiten, dem nördlichen, die Mondgöttin, im dritten, dem westlichen, den Gott des Planeten Venus dargestellt gefunden haben, würden wir hier, im Süden, erwarten dürfen, den Vertreter der Fixsternwelt anzutreffen. Aus dem Edelsteinriemen, der als Muster in den Saum eines hinteren Endes der Schambinde bei dieser zerstörten Hauptfigur des Südens, eingefügt zu sein scheint, möchte man vermuthen, dass hier ein *Xochipilli* abgebildet war. Denn diese Eigenthümlichkeit der Schambinde zeigt z. B. der *Xochipilli*, der Regent des eilften Tageszeichens, auf dem Blatte 13 unserer Handschrift. Aber ich kann nicht einmal mit Sicherheit feststellen, ob hier wirklich ein hinteres Schambindenende gezeichnet ist. Und die weiss und rothe Rosette, die oben an dem linken Rande des Faches noch zu erkennen ist, kann ich überhaupt nicht durch eine Parallele belegen. So bleibt mir weiter nichts übrig, als vor der Hand auf jegliche Vermuthung zu verzichten.

Von den Figuren, die die ersten Glieder der Paare bilden, ist in der ersten, der östlichen Abtheilung (Blatt 75 unten rechts), trotz der starken Abreibung dieses Faches, der Regengott *Tlaloc* noch deutlich zu erkennen. Er ist augenscheinlich in seiner gewöhnlichen Tracht, mit dem Trapeze und dem Strahle (*miotli*), dem Abbilde des Jahres, auf dem Scheitel dargestellt und hält, wie die *Tlaloc*-Figuren der Blätter 27 und 28 unserer Handschrift, einen Henkelkrug mit einem *Tlaloc*-Gesichte in der Hand, von dem eine Edelsteinkette und ein *chalchiuhtl*-Riemen herabrinnen. Dem Gotte gegenüber sind die Kasteiungswerkzeuge, Knochendolch (*omitl*) und Agave-Blattspitze (*uitztli*) und ein grosser, in den Farben des grünen Edelsteins (*chalchiuhtl*) gemalter Topf mit Maiskolben abgebildet. In dem Feuergefässe, das weiter unten am Boden steht, sieht man eine Kautschukugel, einen Edelsteinriemen und einen Maiskolben.

Die Hauptfigur des ersten Gliedes des zweiten, den Norden bezeichnenden Paares (Blatt 76 unten rechts) ist ein rother, mit gelben Flecken gezeichneter Todesgott. Er hält die Kasteiungswerkzeuge, Knochendolch (*omitl*) und Agave-Blattspitze (*uitztli*) in der einen, eine grosse Blüthe (*xochitl*), die hier offenbar das Kasteiungsblut bedeutet, in der anderen Hand. Der Stuhl, auf dem er kniet, hat nicht die gewöhnlichen, stufenförmig ausgeschnittenen Füsse, sondern ruht auf gerundeten, die Gestalt eines Rippenbogens imitirenden Fussstücken. Vor diesem Todesgotte sind wie vor dem Regengotte der ersten Abtheilung noch einmal die Kasteiungswerkzeuge angegeben, sonst aber nur das weisse Feuergefäss, das ausser der Kautschukugel hier noch ein Bündel Brennholz, eine Anzahl einzelner Scheite und einen Grasbusch enthält, während eine rothe, mit Flammenzungen besetzte Schlange an der Wand des Gefässes herabhängt.

Das erste Glied des dritten, den Westen bezeichnenden Paares, Blatt 76, oben links, ist durch

das Anbrennen der Handschrift ganz zerstört worden. Man erkennt nur noch, dass die Hauptfigur auf einem Stuhle mit gewöhnlichen, stufenförmig ausgeschnittenen Füßen kniete und dass dieser Hauptfigur gegenüber kein anderes Symbol, sondern nur das weisse Feuergefäß sich befand, dass also der Charakter der Hauptfigur in dieser ersten Abtheilung des dritten Paares dem der Hauptfigur der ersten Abtheilung der andern Paare ähnlich gewesen sein wird.

Das erste Glied des vierten, den Süden bezeichnenden Paares (Blatt 75 oben links) ist noch vollständig erhalten. Die Hauptfigur stellt sich als eine in grünes *malinalli*-Gras gekleidete und in der Farbe des *malinalli*-Grases gemalte Skelettgestalt dar, die Adlerfänge statt der Hände und Füße hat und auf einem auf abgerundeten Rippenbogen ruhenden Stuhle kniet. Die Figur hält dieselben Gegenstände (Kasteiungswerkzeuge und Blume) in der Hand, wie der rothe, gelbgefleckte Todesgott der zweiten Abtheilung. Und dieselben Begleitgegenstände — Kasteiungswerkzeuge und Feuergefäß mit Kautschukball, Brennholz Bündel, Holzschitten, Grasbusch und an der Wand herabhängender rother Schlange — sind hier, wie bei dem rothen, gelbgefleckten Todesgott der zweiten Abtheilung, abgebildet.

Wenn wir nun nach der Bedeutung der ganzen Reihe fragen, so möchte ich zunächst hervorheben, dass mir die ersten Glieder der Paare in gewisser Weise den Schlangen auf dem Blatte 72 unserer Handschrift zu entsprechen scheinen: die *Tlaloc*-Gestalt in der ersten Abtheilung der grünen Quetzalfederschlange; der rothe gelbgefleckte Todesgott, das erste Glied des zweiten Paares der rothen (oder bunten) Blutschlange; das erste Glied des vierten Paares, das in *malinalli*-Gras gekleidete Skelett, der mit der Farbe des *malinalli*-Grases gemalten Schlange des Blattes 72. Und da mir eine solche innere Analogie zwischen dem Blatte 72 und unseren beiden Blättern 75 und 76 gegeben erscheint, so möchte ich für das zweite Glied des vierten Paares vermuthen, dass die Hauptfigur dieses Gliedes in der That — worauf ich oben schon zu rathen anfieng — *Xochipilli* oder *Macuil xochitl*, kurz den *Auiateotl*, den Gott der Lust, dargestellt habe. Und für das zerstörte erste Glied des dritten Paares möchte ich schliessen, dass eine der blauen Schlange *xiuhcouatl* verwandte Gestalt, also vielleicht *Xiuhtecutli*, der Feuergott, selbst dort auf dem geschnitzten Stuhle gekniet habe, der ja in der That mit dem Gotte des Planeten Venus, der das zweite Glied dieses Paares bildet, in der Regel vergesellschaftet ist.

Diese Analogie, an deren Vorhandensein ich nicht zweifle, scheint mir für die Erklärung beider Reihen von Werth zu sein. Es ergibt sich daraus zunächst, dass die *Auiateteō*, die Götter der Lust, die Dämonen des Südens, in der That die Sterne sind, wie ich immer vermuthet habe, — die *Centzon Uitznaua*, die „vierhundert Südlichen“, mit denen *Uitzilopochtli* kämpfte. In der That, die besondere Ausstattung, mit denen die *Centzon Uitznaua* im Sahagun-Manuskripte beschrieben werden, die — *intech quitlalique in imamatlatqui in anecuyotl in tztizicazamatl itech pipilcac tlacuilolli, iuan in coyolli in cotztitech quiilpique in in coyolli mitouaya oyoualli, iuan in inmiuh tlazontectli* „ihren Papierschnuck angelegt haben, das *anecuyotl*, ihre Nesselmäntel (schwarz gefärbte, mit Adlerdaunenfedern im Quincunx beklebte), an denen bemalte Papiere hängen und Schellen, die man *oyoualli* nennt, an die Waden gebunden haben und einen mit Einschnitten an der Spitze versehenen Speer führen;“ — die aber *ocnen quiualoyouitiua, ocnen quiualoyouia, valmochimaluitectiua*, die vergebens ihn mit ihren *oyoualli*-Rasseln zurückzuschrecken versuchen, (vergebens) an ihre Schilde schlagen“.

Das sind offenbar die Tanzgötter, bei denen ja die *oyoualli*-Rassel, wie ich oben angegeben habe, das kennzeichnendste, ihnen ausschliesslich angehörige Ausstattungsstück bildet.

Da nun aber die *Auiateteō* und *Nanauatzin*, der syphilitische Gott, wie ich oben S. 97 nachgewiesen habe, ident sind, so ergibt sich, dass für die ganze Erzählung von der Verbrennung und Sonnenwerdung *Nanauatzin*'s die Thatsache, dass die Gestirne sich verbrennen, als natürlicher Ausgangspunkt anzunehmen ist, dass sie sich opfern müssen, damit die Sonne am Himmel erscheine, damit es Tag werde, oder, mit anderen Worten, dass die Bewegung des Fixsternhimmels auch die Sonne wieder am Firmamente emporführt.

Weiter zeigen unsere — nach Blatt 72 ergänzten — Blättern 75 und 76, dass in der Spekulation jener alten Priestergelehrten für den Sonnengott der Regen- und Gewittergott *Tlaloc* oder die Quetzalfederschlange, für die Mondgöttin das rothe, gelbgefleckte Skelett oder die rothe Blutschlange, für den Planeten Venus der Feuergott oder die blaue Schlange (*xiuhcouatl*) und für die Sterngötter oder den *Auiateotl* das

in *malinalli*-Gras gekleidete Skelett, d. h. der Affe (vgl. oben S. 290 und Band I dieser Erläuterungen S. 10), nur die Begleiter oder die andere Erscheinungsform bilden. All das ist ja in der That schon in früheren Kapiteln wiederholt zu Tage getreten. Dass der *Auiateotl* und der Affe zusammengehen, ist bekannt. Ist ja doch *Xochipilli* geradezu die Verkörperung des Tageszeichens *oçomàtli* „Affe“. Aber auch die Sterngötter und die Affen gehen zusammen. Denn die Sterngötter sind die Wesen der prähistorischen Zeit, die vor der Geburt der Sonne existierten. Die Affen aber erscheinen in den Sagen überall als die unvollkommene erste Menschenschöpfung. Ueber den Zusammenhang zwischen dem Planeten Venus und dem Feuergotte, und damit auch dem *xihucouatl*, der Feuerschlange, brauche ich kein Wort zu verlieren. Die beiden Götter stehen im *Tonalamatl* zusammen. Sie sind die Krieger, der Ausdruck des *atl-tlachinolli*, repräsentieren den Kriegertod.

Abb. 304. *Kinich ahau*, der Sonnengott. Dresdener Maya-Handschrift.

Den rothen, gelbgefleckten Tod haben wir oben überall getroffen, wo die Zerstücklung, die Phasenbildung des Mondes dargestellt zu sein schien. Aber auch der Zusammenhang zwischen dem Sonnengotte und dem Regen- und Gewittergotte liegt klar zu Tage. Das Zeichen *quiauitl* „Regen“ verkörpert sich auf dem Blatte 9 unserer Handschrift in dem Sonnengotte, und *Tlaloc* seinerseits ist die Verkörperung des Tageszeichens *maçatl* „Hirsch“, — des Thieres, das bei den Mexikanern, so gut wie bei den anderen indianischen Stämmen, mit dem Feuer, mit der Sonne, identifiziert wurde. Auf dem Blatte 33 unserer Handschrift sehen wir das Bild des Mondes von dem Kaninchen, das Bild der Sonne von dem Hirsche getragen. Und wenn in einer Zärimonie, die Preuss bei dem Stamme der Cora beobachtete, und von der er vor Kurzem berichtete, der Morgenstern als Knabe unter dem Altar hervortritt und einen Pfeil auf den Hirsch ins Dickicht schießt, so haben wir darin vermuthlich das Relikt der Erzählung, die ich oben (S. 145) nach der *Historia de Culhuacan y México* übersetzte, von dem Pfeile, den der Morgen-

stern auf die Sonne, die nicht vorwärts gehen will, schiesst. Ich füge hier noch in Abb. 304 einige der Dresdener Handschrift entnommene Bilder des Sonnengottes der Maya-Stämme und seiner Hieroglyphen hinzu, die dieselbe Identität zum Ausdruck bringen, da man in der ersten Hieroglyphe allerdings einfach das Bild der Sonne, vielleicht im Vereine mit dem Bilde des Feuers und der Eroberung, anzunehmen hat, die zweite Hieroglyphe aber zweifellos die Gewitterwolke, den aus ihr zuckenden Strahl und den Donnerschlag zur Anschauung bringt.

Die tiefste Weisheit in Bezug auf die himmlischen Dinge scheint daher von den alten Priestergelehrten auf diesen beiden Schlussblättern des Codex Borgia den Adepten vorgeführt zu sein. Keine Handhabe zur Ausübung wahrsagerischer Kunst, wie viele der früheren Blätter, sondern eine Zusammenstellung des Wissens von den drei grossen Himmelskörpern und ihren zahlreichen kleineren Genossen in einem übersichtlichen und verständlichen Bilde.

28. Die vier Lichtgötter und ihre Erscheinungsformen.

Drittes Tonalamatl-Viertel = **Westen (ciuatlampa).**

Band III

Nachtrag und Inhaltsverzeichniss.

BERLIN
MDCCCXCIX

An
Seine Excellenz
Herzog Joseph Florimond de Loubat.

Ew. Excellenz!

Als ich im Herbste 1906 den zweiten Band des Kommentars über den Codex Borgia Ew. Excellenz vorlegte, war ich im Begriff, von neuem über den Ozean zu gehen, um zunächst an den Kongressen jenes Jahres theilzunehmen und im Anschlusse daran ein weiteres Jahr meinen Studien in México obzuliegen. Es war mir damals nicht möglich gewesen, wie ich es sonst gethan hatte, den Band zugleich mit einem Inhaltsverzeichnisse zu publiziren. Der mühsamen Aufgabe, ein solches für die beiden veröffentlichten Bände anzufertigen, hat sich mein junger Freund Dr. Walter Lehmann unterzogen und sie mit bekannter Sorgsamkeit und Gründlichkeit — mit einer Gründlichkeit, die zu der Bedeutung des Werkes selbst fast nicht mehr in dem richtigen Verhältnisse steht, — zu Ende geführt. So ist der Index zu einem ganzen Bande angeschwollen, wobei Manches, was ich im Texte nur andeutungsweise und muthmassend geäußert habe, mit aufgenommen worden ist. Die Drucklegung und die Korrektur fielen mir wieder zu, da Dr. Lehmann seinerseits, im Herbste 1907, zu einer Forschungsreise ausgezogen ist. Wie die Anfertigung, so ist auch das Lesen eines Indexes nicht gerade eine erfreuliche Arbeit. Bei dem Umfange des Manuskripts hat mir die Korrektur Mühe genug gemacht. Da ich mit anderweitigen Arbeiten überhäuft war, hat sich die Fertigstellung lang hinausgezögert. Der Index wird aber den Studirenden helfen, das reiche Material, das in dieser schönsten aller mexikanischen Handschriften enthalten ist, schnell zum Vergleiche heranzuziehen und das, was ich zur Erläuterung sagen konnte, ohne mühsames Nachblättern sich zu Nutze zu machen. Das Ziel, das Ew. Excellenz mit der Herausgabe der Handschrift und mit dem Auftrage an mich, einen Kommentar dazu zu schreiben, sich steckten, wird damit leichter und vollständiger erreicht werden.

Berlin, April 1909.

Eduard Seler.

Nachtrag zu Kap. 21. „Die sechs Götterpaare.“

Auf S. 170—178 des zweiten Bandes habe ich die sechs Götterpaare behandelt, die auf dem Blatte 57 (=Kingsborough 58) des Codex Borgia abgebildet sind und die, wie ich dort nachgewiesen habe, auch im Codex Fejérváry-Mayer auf den Blättern 35—37 (=Kingsborough 10—8) eine Parallele haben. Ich hätte noch hinzufügen sollen, und trage dies jetzt nach, dass — wenn auch keine direkte Parallele, — so doch eine gewisse Analogie in einer Reihe vorliegt, die, neben Bruchstücken anderer Handschriften, in einfacher Linienzeichnung, ohne Farbe, auf der Rückseite des zapotekischen oder kuikatekischen Codex Porfirio Diaz abgebildet ist, — einer Handschrift, die im Jahre 1891 von der Junta Colombina de México von einem Bürger der Stadt Oaxaca erworben und im Jahre 1892 in dem

Abb. 2.

Abb. 1.

grossen Werke, das diese Junta zu Ehren der vierhundertjährigen Wiederkehr des Tages, an dem der neue Erdtheil Amerika entdeckt wurde, unter dem Titel „Antigüedades Mexicanas publicadas por la Junta Colombina de México“ herausgab, veröffentlicht worden ist.

Es sind hier (vgl. Abb. 1—5) nicht sechs, sondern fünf Götterpaare dargestellt, bei denen auch nicht, wie auf dem Blatte 57 des Codex Borgia, die um je acht (bzw. fünf und elf) Zeichen von einander abstehenden Säulen des in fünfgliedrige Säulen geordneten Tonalamatl's angegeben sind, die ich Seite 170 des zweiten Bandes genannt habe, sondern, in augenscheinlich ganz bedeutungsloser Weise, einmal wiederholt, die zwanzig Tageszeichen in ihrer natürlichen Ordnung. Es hat eben auf dieser Rückseite des Codex Porfirio Diaz ein nicht mehr ganz Eingeweihter Stylübungen gemacht, d. h. Bilder-

schriftbruchstücke zusammengetragen, die er irgendwie kennen gelernt hatte, deren eigentliche Bedeutung er aber nicht erfasst haben konnte. In den Bildern selbst scheinen, wie gesagt, Analogien zu den sechs Götterpaaren hervorzutreten. Ich glaube, dass wir in ihnen Bruchstücke einer besonderen Rezension der sechs Götterpaare des Blattes 57 des Codex Borgia vor uns haben.

Das erste Bild (Abb. 1, Seite 1, auf der rechten Seite) zeigt uns zur Linken, auf einem Jaguarfellsitze, einen thierköpfigen Gott, der mit dem Schmucke *Quetzalcouatl*'s angethan ist, und der augenscheinlich dem *Xolotl* der Handschriften (vgl. z. B. die Bilder Abb. 268—271, Seite 266, 267 des zweiten Bandes) entspricht. Die Göttin ihm gegenüber ist schwieriger zu deuten. Die beiden rechtwinklig begrenzten Streifen, die dem unteren Rande der Wange aufgesetzt sind, scheinen mir darauf hinzuweisen, dass *Chalchiuhtlicue*, die Wassergöttin, gemeint ist. Zwischen beiden Figuren sieht man ein Edelsteingefäss, zu dem von oben ein Quetzalvogel herabfliegt. Ich erinnere daran, dass im Codex Borbonicus die Abtheilung, die dem sechsten Jahresfeste der gewöhnlichen Zählung, dem Feste *Etzqualiztli*, entspricht, — das das Fest des Regengottes ist und in anderen Handschriften einfach durch das Bild *Tlaloc*'s, des

Abb. 3.

Regengottes, veranschaulicht wird, — neben einem kleinen Bilde *Tlaloc*'s eine grosse Figur *Xolotl*'s und ihm gegenüber *Quetzalcouatl*, von tanzenden Dienern oder Priestern *Xolotl*'s umgeben, aufweist. Ich möchte deshalb diese Abb. 305, *Xolotl* und *Chalchiuhtlicue*, als Parallele zu dem vierten Bilde des Blattes 57 des Codex Borgia, zu *Tlaloc* und *Chalchiuhtlicue*, auffassen und die Abb. 305, gleich diesem vierten Bilde des Blattes 57, als Repräsentanten des Südens betrachten.

Das zweite Bild (Abb. 2, Seite 1 auf der linken Seite) ist eine deutliche Parallele zu dem sechsten Bilde des Blattes 57, das die sechste Region, die Unterwelt oder die Richtung nach unten, veranschaulicht. Wie dort, sehen wir hier in der Mitte zwischen den beiden Figuren einen Erdrachen und in ihm einen Schädel, in dessen geöffneten Mund, von den Zahnreihen gepackt, ein Mensch kopfüber hineinstürzt. Aber wir haben hier nicht, wie dort, den Todesgott und die Todesgöttin, sondern zwei weibliche Gottheiten dargestellt, — auf der linken Seite *Mictecaciuatl*, die Herrin der Unterwelt, auf der rechten *Tlaçolteotl*, die Mond- und Erdgöttin, die ja bekanntlich den Namen *Tlalli iyollo* „Herz (oder Inneres) der Erde“ führt. Sie ist von der rothen Schlange, die Sünde bedeutet, begleitet, und ihre Bemalung und Ausstattung entspricht durchaus dem, was ich in den beiden ersten Bänden an verschiedenen Stellen wiederholt und eingehend für diese Göttin beschrieben habe.

Das dritte Bild (Abb. 3) schliesst nun an. Es sind die beiden Götter der Blumen, *Xochipilli*, der männliche Gott, und *Xochiquetzal*, die Göttin, die wir auf dem fünften Bilde des Blattes 57 des Codex Borgia sahen, die auch hier ein Edelsteingefäss zwischen sich haben, zu dem von oben ein Quetzalvogel

herabfliegt. Nur sind die beiden Götter hier einander zugekehrt, nicht, wie auf Blatt 57 des Codex Borgia, von einander abgewendet gezeichnet. Wie dort, werden aber auch hier diese beiden Götter die fünfte Region, die himmlische Höhe, bezeichnen.

Das vierte Bild (Abb. 4) weicht anscheinend vollständig ab. Wir sehen zwei Figuren, die in ihrer Zeichnung, mit ihrem schwarzen Gesichte und der svastika-artigen Bemalung um die Augen

Abb. 4.

Abb. 5.

entschieden etwas Unheimliches haben. Ich glaube, dass es die beiden alten Zauberer, *Ovomoco* und *Cipactonal*, sein sollen, die verschlungene Reden, Zaubersprüche, sprechen, und dass diese hier für die beiden Urgötter, für *Tonacatecutli* und *Tonacaciuatl*, die auf Blatt 57 des Codex Borgia die Repräsentanten des Ostens sind, stehen sollen.

Das letzte Bild (Abb. 5) zeigt uns zur Linken einen Gott, der ganz nach Art des Sonnengottes des Tonalamatl's der Aubin'schen Sammlung gezeichnet ist, aber ein rundes Totenauge hat, und demnach, wie die sonnengottartige Figur des Blattes 6 der genannten Handschrift, den Mondgott bezeichnen muss. Ihm gegen-

über sehen wir *Tezcatlipoca*, und zwischen beiden die Netztasche (*chitlāli*), das kennzeichnende Merkmal der Jägerstämme des Nordens. *Tezcatlipoca* ist auch ursprünglich ein Mondgott, und er wie der Mondgott im engeren Sinne, sind bekannte Vertreter des Nordens, — die hier statt der Pulquegötter stehen, die als zweites Bild des Blattes 57 des Codex Borgia den Norden bezeichnen.

Demnach hätten wir hier, auf der Rückseite des Codex Porfirio Diaz, in der regulären Folge, dem herkömmlichen sakralen Turnus entsprechend, die Himmelsrichtungen des Südens, Unten, Oben, Ostens, Nordens dargestellt. Und es fehlt nur der Westen, der auf Blatt 57 des Codex Borgia durch die beiden Maisgötter veranschaulicht war. Der Zeichner dieser Bilder des Codex Porfirio Diaz war eben, wie ich oben sagte, nur ein Stylübungen machender Schüler, der seine Aufgabe nicht gründlich begriffen und uns nur Unvollständiges zu Papier, bzw. zu Leder, gebracht hat. Denn auch der Codex Porfirio Diaz ist, gleich anderen Handschriften des südlichen und östlichen México, auf Hirschleder, das mit einer dünnen Stuckschicht bedeckt ist, geschrieben. Unvollständig, wie sie ist, ist diese Reihe doch von Werth, und gerade durch die Abweichungen, die sie gegenüber den Darstellungen des Codex Borgia und des Codex Fejérváry zeigt, da wir auch hier wiederum sehen, wie immer dieselben Ideen den so mannigfaltigen und abweichenden Darstellungen der Bilderschriften zu Grunde liegen.

Index

bearbeitet von Dr. Walther Lehmann.

aac (Maya), Schildkröte, vom Speer des Planeten Venus in der vierten Periode (Süden) getroffen. I 336; II 154.

Aasvogel, s. Geier (Halsbandadler, *cozcaquauhtli*). — Gegenstück zum Totenvogel (der Eule) I 180; II 252, 253, — repräsentiert Schmutz, Sünde. I 307; I 253.

Abbild, Darreichen des, = Opfer. I 239, 240.

Abbild der Mondgöttin, s. *yacameztli*. — der *Teteoinnan* (*Tlaçolteotl*), geköpfte Göttin II 10 — *Tepeyollotli*'s, in der Zelle des Hauses der rothen Schlange. II 21 — aus einer Rauchwolke entspringend. II 21.

Abbreviatur eines Weiberkopfes (Erdgöttin), Mayahieroglyphe für *caban*. I 191 — für *Tamoanchan*, s. *tecpaxoch*. (I 243).

Abbreviatur des Sonnenbildes, das Feuer- und Jahressymbol: Trapez und Strahl. I 112, 236; II 74, 173, 216, 277.

abgebildete Figurenzeichnung. I 41, 43.

Abend, s. *Tlapoyaua* — s. Gott des Abends — mit ihm *Tezcaltlipoca* in Verbindung gebracht II 12, 23.

Abendhimmel = Westen. I 186; II 14, 16, 21, 22, 264 — = *Tamoanchan*. II 20, 25. — Zunehmender Mond am Abendhimmel = *Tezcaltlipoca*. II 12, 23, 32, 35, 63, 298 — an ihm erscheint der neue Mond. II 264 — Land der Geburt, Urheimat. II 264 — an ihm erscheint der Planet Venus als Abendstern. II 14, 17 — an ihm ziehen die Vorfahren (*Ueuetetēō*, *Ciutatetēō*) auf. II 20, 25.

Abendhimmel, Westregion, s. Nord- und Südpfeiler der Westregion — auf Bl. 33 u. 34 des Codex Borgia durch ein Haus der schwarzen (♂) und der rothen Schlange (♀), sowie durch einen herabfliegenden Adler (*quauhtemoc*) gekennzeichnet. II 17.

Abendhimmel, als *Tlilan Tlapallan*, *Tlatlayan*, Reich des Feuergottes aufgefasst. II 24 — seine Bemalung halb rot, halb schwarz (s. *Chietlapanqui*). II 158.

Abendhimmel, seine Region aufgefasst als ein Reich des Feuers, des Dunkels (der Erde), des Windes, des Wassers. II 25, 26, 35.

1. als Herrschaft des Feuers. II 24, 28

2. des Dunkels (der Erde). II 28ff.

3. des Windes. II 33ff.

4. des Wassers. II 35ff.

Abendhimmel, Mond des —, der neue Mond mit aschgrauer Scheibe und schmaler, glänzender Sichel. II 56, 57.

Abendhimmel, s. *Ciutlampa*.

Abendröte. II 24 — die elfte Tagesstunde. II 298.

Abendsonne, geht in die Erde ein = tote Sonne. I 197 — ihr Begleiter s. *Xolotl*.

Abendstern, Form des Planeten Venus. I 238 — am West-

himmel erscheinender Planet. I 337 — östliche Elongation des Planeten Venus; sein Erscheinen dauert 250 Tage (in der Dresdener Maya-Handschrift). I 350 — seine astronomische Beobachtung im Westen erklärt den veränderten Beginn des sakralen Turnus der Himmelsrichtungen mit dem Westen. II 140.

Abendstern, *Quetzalcouatl* als solcher aus der Himmelspforte heraustretend. I 200 — *Quetzalcouatl* als *chicunau iecatl*, mit dem schwarzen Adler verwandt. I 332 — die Unterwelt verlassender *Quetzalcouatl*, der am Abendhimmel erscheint, im Westen aufgeht. II 14 — schwarzer *Quetzalcouatl*. II 32 — vor ihm dahinwandelnd *Tezcaltlipoca*, der Genosse *Quetzalcouatl*'s. II 32 — angedeutet durch Träger abgeschnittener Leichenköpfe in Steinmesserverkleidung. II 13 — Moment, wo er mit der Sonne im Rachen der Erde verschwindet. II 45.

Abendstern, vertreten durch *Xipe Totec*, vierten der fünf Hüter der dritten Venusperiode. I 271, 279 — für ihn steht *Chalchiuhtlicue*, vierter der fünf Hüter der vierten Venusperiode. I 279.

Abendstern, *Tlauizcalpantecutli*, bzw. *quetzaltotl*, bezeichnet die zwölfte Tagesstunde. II 298 — ist der Krieger des Abendhimmels und durch Embleme des Krieges angedeutet. II 35 — von den *Michuaque* als der „Kriegerstern“ bezeichnet. II 34, 35 — ihm nahe stehend eine Gottheit mit einem der Lippenschlange *Tlaloc*'s ähnlichen Gebilde unter dem Auge, auf Maya-Skulpturen. II 141.

Abendsternreihe. I 337—341.

abgerissene Arme und Beine, im Süden der Unterwelt. II 58, 65.

Abgerissener Fuss *Tezcaltlipoca*'s. I 21, 146, 221, 222, 282; II 12, 32, 159 — *Xochipilli*'s. I 146; II 63, 64 — *Tlauizcalpantecutli*'s. I 146; II 64 — s. *Hurakan*. (I 147) — *Axomocuil*, Name eines der Genossen *Yacatecutli*'s; entspricht *Hurakan* (Quiche) und *Tezcaltlipoca*. II 128 Anm. 2.

abgerissener Fuss *Tezcaltlipoca*'s durch eine Art Spiegel ersetzt. II 9 — ihm vergleichbar der Kopf der rothen Blutschlange (*tlapalcouatl*) an Stelle des linken Fusses der *Tlaçolteotl*, des zweiten der sechs Himmelswanderer. II 159.

abgerissener Fuss s. junger Mond — s. hinten, beim Mond.

abgerissener Jaguarfuss, s. Jaguarfuss.

abgerissener Kopf des Stern Gottes. II 58, 65.

abgerissener Menschenkopf, in der Hand *Tlacatzinacantli*'s. II 61 — bei dem Determinativ der *Tlaçolteotl* des Südens. II 82, 84.

abgerissener Wachtelkopf bei der zweiten Nachtstunde.

- II 182 — bei *Xipe* und der *Itzpapalotl*. II 262, 263 — bei *Tonatiuh*. II 290.
- abgerundete Enden** der Trachtstücke *Quetzalcoatl*'s. I 87, 88 (s. auch unter *marlatl*). II 110, 245, 265 — *Xolotl*'s. II 265 — der Stirnbinde einer der neun *Quetzalcoatl*-Figuren, die den Sonnengott der Unterwelt umgeben. II 47 — der Kopfschleife des Pulquegottes. II 245 — der Kopfbindeschleifen des Mondgottes vor dem Tempel des Nordens. II 110.
- Abgeschlagener Kopf**, des Abbilds der Erdgöttin. I 154, 155 — der Erdgöttin selbst. II 184 — in der Hand des Priesters beim Fest der *Itamatecutli*. I 156, 192 — bei der *Conatlilcue* durch zwei Schlangen ersetzt. II 184, 264 — beim Ständer bei der *Itzpapalotl*. II 264 — in der Hand des herabstürzenden, sich selbst opfernden Opfermenschen. I 297 — mit Gesichtsbemalung und Schmuck *Tezcatlipoca*'s. I 297 — blutropfend, in jeder Hand von je zwei Gestalten in Adler- und Steinmesserverkleidung. II 10 — Brustschmuck des *Tlacatzinacantli*. II 61, 62 — Figur mit abgeschlagenem Kopfe = Opfer, Begleitbild im Tonalamatl. I 49 — Hand mit abgeschnittenem Kopfe = richterliche Strafe. I 56.
- abgeschlagener Kopf**, s. geköpfte Göttin (Mondgöttin) — s. Frau mit Blütenbaum — s. Frau mit abgeschlagenem Kopfe.
- abgeschnittene Arme**, Beine, Köpfe u. s. w. s. zerstückte Gliedmassen.
- abgeschnittene Köpfe**, bei der Region des Südens dargestellt, bald in Gestalt von roten und gelben Skelettköpfen, bald von Leichenköpfen; sind einerseits auf den Mond, andererseits auf den Morgenstern (oder die Sterne) zu beziehen. II 11, 12 — bezeichnen den Süden. II 4, 11, 58, 65 — s. Skelettkopf — s. Leichenkopf. — s. Zerstückung, Region der Zerstückung.
- abgeschnittene Menschenhände** und Steinmesser, am Dachfirst des Tempels des Südens. II 115.
- abgeschnittener Adlerfuss** (*quauhteteponlli*), Zeichen der Erde; Begleitbild im Tonalamatl. I 50, 51.
- abgeschnittener Arm**, neben dem *Tlacatzinacantli* des Cod. Vatic. II 61.
- abgeschnittener Kopf mit zwei Stirnlocken**, veranschaulicht Phasenbildung des Planeten Venus. II 11, 12, 58 — s. Phasen.
- abgeschnittener Skelettkopf**, in jeder Hand von vier *Tezcatlipoca*-Figuren. II 10.
- abgeschnittener Thierfuss**, in der Schüssel bei dem Abbild der *Xochiquetzal*. II 40.
- abgeschnittener Unterarm**, s. *temacpal* — Unterarm einer *moctinaquetzqui*. I 298.

I 270 — bedeutet Richtungsgegensatz bei *Xochipilli* und *Xochiquetzal*, des fünften der sechs Götterpaare (Oben und Unten, Osten und Westen; junge Sonne, neuer Mond). II 175 — bei der *Xochiquetzal*, der zweiten Nachtstunde. II 182 — der siebenten Nachtstunde. II 194 — der achten Tagstunde. II 197.
- Abgewendet sitzen**, s. hinten.
- abgezogene Menschenhaut**, s. *euatl*, *Xipe*, *tlacaxipenaltzli*, *Ochpaniztli*, *mexxayacatl*, *tlacaeuatl*.
- Abhängigkeitsgefühl**, s. Religion.
- Abhängungsschnitt**, angedeutet bei *Xipe Totec* durch über das Auge verlaufenden rothen Längsstrich. II 256.
- Abnehmender Mond**, dem Tode sich nahend. I 104 — geht nach dem Osten, dort zu sterben. II 84 — im Osten an-
gelangt, verbrennt sich, stirbt und verwandelt sich in den Morgenstern. II 33, 78, 298.
- Abreissen des Kopfes** (Wachtelopfer) *tlaquecheotonaltzli*. II 290, 291 — Anspielung auf den „geköpften Mond“. II 290, 291.
- Absätze**, trapezförmige, des Leibes der (blauen) Feuer-
schlange des Nordens der Mitte der Unterwelt. II 73.
- Abschlagen des Kopfes**, beim Opfer der *Teteoimman* am *Ochpaniztli*-Fest. I 154, 155; II 10 — am grossen Krokodile des Landes des Tropfens (*noh ytzam cab ain*) beim Weltuntergang ausgeführt. II 156.
- Abstände** aufeinanderfolgender Tage durch Tageszeichensäulen dargestellt. II 14, 124, 170 — der Anfangszeichen aufeinanderfolgender Venusperioden durch Tageszeichen bezeichnet. II 138 — der fünf Perioden, die in Wirklichkeit zwischen den Perioden liegen, deren Anfänge in der schematischen Aufzählung der 13×5 Venusperioden einander folgen, im Cod. Vatic. durch fünf Gebilde aus Scheibe, Trapez und Schlangenzunge bezeichnet. II 138.
- Abstände**, in den Maya-Handschriften peinlich genau fixiert. II 138.
- Absterben** des Neumondes, Vorbild für das der Vegetation. II 11.
- Abwenden vom Licht**. I 192.
- Academia de la Historia**, in Madrid; dort liegt die eine Hälfte des Sahagun-Manuskripts. I 84 etc.; II 247.
- acaltetepontli** (Krustenechse), *Heloderma*. *Aphrodisiacum*. I 96.
- acatl**, Rohr. Dreizehntes Tageszeichen. I 12, 42, 59, 144–152, 306, bedeutet richterliche Gewalt. I 42, 144. — Sein Regent *Tezcatlipoca ixquimilli*. I 145 ff. — Anfangszeichen des ersten der vier Jahre. I 342, 343, 344 — bei diesem Tageszeichen ist der Sonnengott als Repräsentant der Geopferten, der Krieger, dargestellt. I 306 — entsprechende Maya-Hieroglyphe. I 316, 317.
- acatl**, als Tageszeichen mit dem rechten Auge (Stirn?) *Tezcatlipoca*'s verbunden. I 282 — als *ome acatl*. I 282 — mit dem Auge *Tlaloc*'s verbunden. II 301 — als Tageszeichen verbunden mit dem linken Vorderfusse des als Hirsch verkleideten *Xochipilli*. II 136.
- acatl, tecpatl, calli, tochtli**, Tageszeichen der ersten Säule des fünften Tonalamatl-Fünftels (Mitte). II 4.
- acatl, tecpatl calli, tochtli** [1], zu ergänzende Tageszeichensäule auf Bl. 29 des Codex Borgia. II 15 — bezeichnet die fünfte Weltgegend, Mitte. II 15.
- acatl**, Jahre (Ost-Jahre), Regengott des Ostens, Jahre der Fruchtbarkeit und des Wohlgedeihens des Mais. I 345, 346; II 123 — ihr letzter Tag (*macuilli olin*). II 123 — der *Nanauatzin* dieses Namens (*macuilli olin*) Bringer der *tecpatl*-Jahre. II 123.
- acatl**, Anfangszeichen der vierten der fünf Venusperioden. I 239, 327, 337; II 137, 148 — in ihm schiesst *Tlanizcaltapantecutli* die Könige. II 148, 157 — s. *tlatoque*, *tlatocayotl*.
- Accoucheur**, *Tezcatlipoca*, bei der zehnten Tagstunde. II 201.
- aco** „oben“. II 244 — s. *tlani*.
- Acolchichimeca** verlassen im Zeichen *chicome macatl* die Ur-
heimat *Chicomoztoc*. I 206.
- Acolhua** Pulquegott. I 140
- Acompañados**, s. Neun Herren der Nacht.
- acuecuetzpalin**, Leguan, echter (*Iguana tuberculata*) I 95.
- acuechcozcatl**, Halsband von Schneckengehäusen, bei *Quetzalcoatl*. I 88; II 245 — bei *Xolotl*. II 265. — bei *Ueucocoyotl* II 216, 222, 224 — beim Pulquegott II 173, 245.
- acxolma** „das, woraus unser Leib (*tonaca*) sich aufbaut“; die Maisfrucht (*centli*). II 128 — s. *acxotl* (*acxoyotl*) *icxotl*.
- Acxomocuil** „dem der Fuss weggenommen ist“, Name eines der Genossen *Yacatecutli*'s; *Hurakan* (Quiche), *Tezcatlipoca* entsprechend. II 128 (Anm. 2).

- acxotl**, *acx-yotl*, Abstractum von *icxill* „Fuss“. II 128 Anm. 2) — s. *acrolma*. *Acromocuil*.
- acxoyatl**, grüne Fichtenzweige, Opfergabe für *Tezcatlipoca*. I 148, 222 — im Räuchergefäß beim Gotte des Südens. I 339.
- Achat**, gebänderter. II 246.
- Achitometl**, einer der *Tzitzimine*. I 186.
- Acht**, Gottheit dieser Zahl ist gleich dem Gott mit dem *Kan*-Zeichen auf Mayamonumenten und *chicuei cipactli* „8 (Krokodil)“ zu lesen. I 217.
- acht Abteilungen** des dunklen Randstreifens, der die geköpfte Göttin des Südens der Unterwelt umgibt, mit Darstellungen des Zerstückten, Geköpften. II 10.
- acht Jahre**, alle —, das Fest *Atamalqualiztli* gefeiert. I 176 — gleich fünf Venusperioden. I 176.
- acht kleine Sonnenscheiben**, an Gliedern *Youaltecutli's* im Osten der Unterwelt. II 47, 56.
- acht Tage**, Dauer der Unsichtbarkeit des Planeten Venus in unterer Konjunktion, in der Dresdener Maya-Handschrift. I 350; II 15, 153 — ist *Quetzalcouatl* unsichtbar, d. h. vier Tage weilt er in der Unterwelt, vier Tage ist er Knochen. Diese Zeit braucht der Gott, um aus dem *Quetzalcouatl* (Mondgott) in den *Tlauizcalpantecutli* (Venus) sich zu verwandeln. II 16 — Abstand von *ce acatl* bis *chicunauui cipactli* II 15, 16.
- achter Himmel**, in ihn steigt *Camarthi*, um vier Männer und ein Weib als Opfer für die Sonne zu schaffen. I 264 — bewohnt von *Tlalocantecutli*. II 292, 294.
- achtzig Tage**, 77–80 Tage, Dauer der Entfernung des Planeten Venus von der Sonne II 2, 14, 15.
- aci** s. *itech aci* = „begatten“. I 172, 173.
- acipactli**, Dämon des Westens. II 62, 63, 65, 68. — Schwertfisch, mythisches Wasserungeheuer. II 62, 63, 65, 68 — in der Reihe der vier zerstückelnden Thiere ersetzt durch *quetzalototl*. II 238 — beim blauen *Auiateotl*. II 303, 305.
Arme zum Empfang ausgebreitet, s. Empfang.
Armring, s. *machoncotl*.
Armut, s. *icnoyotl* — s. Wasserstrom (*atocoua*).
Arzt, *Tezcatlipoca* der zehnten Tagstunde, als Geburtshelfer. II 201.
Aerzte, (*titici*), verehren die *Tetco innan*, die Göttin der Medizinen. I 153 — die beiden alten, *Oromoco* und *Cipactonal*. II 194.
Asche, *Quetzalcoatl*'s verwandelt sich in *tlacototomê*. I 87; II 3, 34, 291 — Asche seines Vaters. II 34, 35 — verwehene Asche. II 3 — wiederbelebt durch den Wind des *itzceccayan*. II 34.
Aschenkiste, *nexcaritl*, aus ihr die dunkle Masse nebst Aschenwirbel hervorkommend. II 34 — in ihr das *chalchiuhtl*-Herz eines toten Königs aufbewahrt. II 6.
Aschenpacket, s. *nexquimilli*.
Aschenwirbel, grosser. II 33, 34.
aschgraue Scheibe des Mondes des Abendhimmels. II 56.
Astralmythen. II 1.
Astronomie des Planeten Venus bei den Maya fremder, mexikanischer (?) Import. I 336; II 157 — in den Bilderhandschriften der Maya peinlich genau berechnet, in denen der Mexikaner (Wissen voraussetzend) nur angedeutet. II 138.
astronomische Beobachtungen. II 140.
astronomischer Tag, Zeit von Mitternacht zu Mitternacht, durch die 13 Götter und 13 Vögel veranschaulicht. II 298, 299.
atamalqualiztli Wasserkrapfessen, alle acht Jahre gefeiertes Fest, zur Erneuerung der Lebensmittel. I 136, 176, 211 — Lied an diesem Feste. I 193; II 62 Anm.
Atempan, Name eines Tempels, vollständig vielleicht *Atempan tlachinoltempan* „Schlachtfeld“. I 160.
atempantlachinoltempan „Ort des Wassers und des Brandes — des Krieges“, Schlachtfeld; bei der fünften Venusperiode angedeutet (?). II 151.
Athem, s. Leben — Wind.
atinemi tlamintinemi „sie jagen und sie schiessen“, von den Chichimeken (*Tamime*) gesagt. I 263.
atl, Wasser, neuntes Tageszeichen. I 8, 37, 71, 115–125, 235, 305 — ursprünglich = Wasser des *atl-tlachinolli*, sein Regent der Feuergott. I 115ff — bei diesem Tageszeichen *Xochipilli* als Feuergott dargestellt I 305 — entsprechende Mayahieroglyphe. I 313 — Hieroglyphe durch Hinzufügung eines rothen und eines weissen gefranzten Streifens in die Hieroglyphe *chalchiuhtl* verwandelt (s. *chalchiuhtl*). I 9 — Durch Höhle (*oztotl*), aus der Wasser hervorbricht, veranschaulicht; Begleitbild im Tonalamatl. I 37, 71 — *teoatl tlachinolli* andeutend. I 281.
atl, das fließende Wasser, Symbol der *Chalchiuhtlicue*. I 228 — bei der *Tlacototl* des Westens dargestellt — s. *atl tlachinolli*.
atl, Anfangszeichen der dritten Venusperiode. I 239, 327, 337; II 137, 148 — in ihm ist allgemeine Dürre. II 148, 157 — s. *touaquiz*, *tlauaquiz*.
atl, als Tageszeichen mit dem Spiegel (*tezcatl*) *Tezcatlipoca*'s verbunden I 281 — an einem queren weissen Schilde bei *Xochipilli*. II 135 — mit der Hand *Tlaloc*'s verbunden. II 300 — bezeichnet ihn als Wasserspender II 300 — in Form einer Kette von Röhrenknochen, bildet das Gestell, auf das, vor dem Tempel *Xolotl*'s endend, der Ballspieler *Tlaloc* seinen Fuss setzt. II 37.
atl, Vorstellungszusammenhang von *quetzalli*, *chalchiuhtl* und *atl*. II 65.
Atlacoaya, Pulquegöttin. I 140.
atlacuilolli, mit Wasser bemalt, Gewand der *Mayauel*. I 274.
atlan calaquiliztli ins Wasser tauchen, Begleitbild im vierten Tonalamatl-Viertel. I 73.
atlantische Golfküste, das *tonatiuh ixco* gelegene Land = *Olman*. II 214
atlatl, Wurf Brett, in der Hand *Tlauizcalpantecutli*'s. I 286; II 71, 143 ff. — *Mircouatl*'s — des Fledermausgottes. II 61 — *Cinteotl*'s. II 134 — in der Hand des *temani*. I 71 — des Feuergottes. I 115; II 73 — *Tezcatlipoca*'s. I 292; II 32, 71 — damit wirft *Tonatiuh* ein Herz der Sonnenscheibe in der Cella des Tempels des Ostens (über dem Ostbaume) zu. II 108 — desgl. der Mondgott beim Tempel des Nordens. II 110 — desgl. *Cinteotl* beim Tempel des Westens. II 114.
atlatl und Speerbündel, in der Hand der Hüter der fünf Venusperioden. I 329 — bezeichnet *Tlauizcalpantecutli* als den „Schiessenden“. II 143–157 — bezeichnet zusammen mit *chimalli* und *tlacochtli* den Krieg *yaoyotl*. I 143, 260.
Atlatonan. „Unsere Mutter am Wasser“, Göttin im Tempel *Xochicalco* in México verehrt (zusammen mit *Tlatlauhqui Cinteotl*). I 135 — Göttin des Küstenlandes I 135, 136.
Atlaua, Gott von *Cuitlauac*, hat Gesichtsbemalung des Morgensterns. I 254; II 238.
atl ayauican, Land des Wassers und des Nebels = *Tamoanchan*, Paradies des Westens (*atl yayarican*). I 157; II 62.
Atlas zu dem Geschichtswerke Duran's. I 260.
Atlixco, *Tlaloc*-Steinfiguren von dort. I 110.
atl-tepetl = *altepetl* „Dorf, Gemeinde“, vertritt den Begriff Kriegerschaft (*quauhtyotl*, *yaoyotl*). II 151, 152.
atl-tepetl tlachinolli s. *atl tlachinolli*. I 125
atl tlachinolli, Wasser und Brand, metaphorischer Ausdruck für Krieg, bei *Xiuhcutli* angegeben. I 124, 125, 257; II 70, 74, 78, 238, 277, 309 — bei der Feuergöttin *Chantico*. II 277 — bei *Tlauizcalpantecutli*. I 286; II 78,

- 239, 307, 309 — beim Sonnengotte. II 306 — eine Anspielung darauf ist die Ausstattung der *Chalchiuhtlicue*, deren Symbol *atl* ist, mit Trachtzeichen der Feuer-göttin *Chantico*. I 228 — der Feuergott (*Xiuhtecutli*) im Wassergefäße bei derselben Göttin. I 229 — bei dem Regengotte des Nordens durch den rauchenden Spiegel *Tezcatlipoca*'s repräsentiert. I 146, 221 — Herabkommen des Krieges. I 61 — Wasser mit Feuerzungen. I 9 — dargestellt durch ein Wassergefäß und gelbe Federn bei *Tezcatlipoca*. I 221 — Determinativ bei der *Tlaçolteotl* des Ostens, brennendes Haus und die nackte Figur einer Göttin im Wasser. II 78 — von der blauen *Ciateotl* (Nord-*tzitzimilt*) herabgebracht. II 117 — Unterlage des Steinmessers (*tecpatl*), auf dem der Feuerreißer des Nordens Feuer bohrt. II 118 — mit *aztamecatl* verschlungen, auf der Unterseite des Steinkopfes der *Coyolxauhqui*. II 277 — Krieg, s. *teotl tlachinolli* — s. *atempantlachinoltempan*. (I 160) — *atl* in dieser Phrase bezeichnet vielleicht *altepetl* „Dorf“. I 125.
- atocoua**, „Alles wird vom Wasser fortgerissen“, Ausdruck der Vergänglichkeit bei der *Chalchiuhtlicue* (s. Wasserstrom). II 225
- atonatiuh** Wassersonne, erste der vier präkosmischen Weltperioden. I 204; II 25 — ihr Zeichen *nani atl*. I 204.
- Aubin**, Tonalamatl der —'schen Sammlung; Erläuterungen dazu von Eduard Seler. I 17 etc.
- Aubin-Goupil'sche** Handschriftensammlung. II 4, 22, 29 (Abb.), 40, 101 (Abb.), 102, 144, 148, 152 (Anm. 1), 155, 247.
- aufeinanderfolgende Tage**, ihre Abstände durch Tageszeichensäulen ausgedrückt. II 14, 15.
- Aufgang** der Sonne im Osten (*Tlilan-Tlapallan*, *Tlatlayan*), Kern der *Nanauatzin*-Legende. II 53 — *Nanauatzin* im Kochtopfe und in der Adlerschale brennend. I 200; II 53 ff. — s. Selbstopfer.
- Aufgang** des Abendsterns im Westen, am Abendhimmel. II 14 — durch eine Kautschukugel mit fünf daraus hervorkommenden Blitz-bewaffneten Figuren, und durch Feuerbohren dargestellt. II 27–28 — durch verschiedenfarbige Feuerwesen dargestellt, die aus Rauchwolken über dem Spiegel *Tonacatecutli*'s, auf dem Feuer gebohrt wird, hervorkommen. II 28.
- Aufgehen** des Morgensterns am Tage 1 *chicchan* (*ce couatl*). I 350, 351 — in der zweiten Morgenstunde. II 295.
- Aufgehen eines Gestirns** am Himmel. — durch Schmoren im Topfe, Selbstopferung im Feuer, bewirkt. I 200.
- aufgehende Sonne**, s. Osten — s. *quauhileuanitl* — s. *tlatlauhqui Tezcatlipoca*. I 148 — s. *Nanauatzin*. — s. *Xochipilli*. (I 223.)
- aufgesperrter Erdrachen**, bezeichnet die untere Region. I 177; II 2.
- Aufrichtung des Himmels**, s. Himmel.
- Aufschneiden** der Brust, gewöhnliche Form des Menschenopfers. I 206; II 52 — regelmässig bei *Mixcouatl*, dem Opfermenschen, dargestellt, s. *Mixcouatl*. — der Brust, beim Gotte des Bluts dargestellt. I 302 — beim Jaguar, der den *chietlapanqui* Nachthimmel emporhält. I 304 — der Brust beim *teyolloquani*. I 306.
- Aufsteigen**, langsames, der Sonne; Abbild davon das Opfer des *Torcatl*-Festes, das die Stufen der Pyramide *Tlacoche-calco* langsam emporsteigt. I 147.
- Aufsteigen** aus der Erde, durch Steinmesser im Rachen der Erdkröte ausgedrückt. II 295.
- aufsteigender Adler**, *quauhileuanitl* = Sonne. I 147.
- Auf- und Absteigen**. II 179, 180, 207–208 — s. Unten.
- Auge**, in der Mitte des Zeichens *olin* = Sonne. I 14 — von Dunkel umgebenes = Mitternacht (*yualnepantla*). II 193 von Dunkel umgebenes, = Nacht- oder Stern, auf dem Scheitel *Quetzalcouatl*'s. I 87, 111, 130, 131, 307; II 28, 214 — *Xolotl*'s. I 87, 111, 130, 191, 197, 307; II 265 —
- auf dem Scheitel einer der neun *Quetzalcouatl*-Figuren II 17 — auf dem Scheitel des *Xolotl*-Gesichtes bei dem Mumienbündel mit der Sonnenscheibe. II 268 — auf dem Scheitel *Cinteotl*'s. II 113, 134 — *Xochipilli*'s. I 87, 111 — *Piltzintecutli*'s. I 222 — *Yualtecutli*'s. II 28 — eines schwarzen Gottes. I 307 — *Tlaloc*'s. I 87, 111, 307, 330, 345; II 28 — in der Mitte des Hutes *Quetzalcouatl*'s. I 87; II 167 — in der Hieroglyphe *malinalli*. I 12 — Symbol des Opfers I 66, 270 — durch weisses Windkreuz ersetzt. II 167 — verbundenes, s. *ixquimilli*.
- Auge**, *Tlauizcalpantecutli*'s, Regenten der ersten Venusperiode, im Codex Vaticanus mit blauem, der Lippenschlange *Tlaloc*'s ähnlichem Gebilde. II 141 — erinnert an einen Typus von Skulpturen der Maya-Region. II 141 — Urform des weissen Ringes, des Brustschmuckes *Tezcatlipoca*'s. I 152, 221, 256, 270.
- Auge**, ausgebohrt bei *Quetzalcouatl*. I 245; II 21, 131 — Zeichen der Kasteiung. II 131 — Ausbohren des —, = Opfer. I 61, 71, 201, 239.
- Auge**, ausgelaufenes, hervorquellendes bei *Quetzalcouatl* (s. ausgebohrtes Auge). II 21 — bei *Nanauatzin*. II 21, 26, 56, 91 — bei der Mondfigur des Abendhimmels im Westen der Unterwelt. II 56, 91 — ausgelaufenes, herausquellendes bei *Xolotl*. I 191, 193, 194; II 52, 56, 91 — bei den *Ciateotl*. II 91 — bei der zweigesichtigen Maske des *Tititl*-Festes. I 192 — bei *Tepeyollotli*. II 21, 26, 91 — heraushängendes (hervorquellendes, ausgelaufenes), Ausdruck des Missgeschaffenen, Krankhaften. II 91.
- Auge**, geschlossenes bei *Xochipilli* als Mondgott. I 246 — bei der vom Speere des Planeten Venus in der ersten Periode getroffenen *Chalchiuhtlicue*. II 149 — s. geschlossenes Auge.
- Auge** = Stern. I 256; II 7, 28, 47, 64, 65 — Assoziation von Auge und *tecpatl*. I 283 — bezeichnet klaffende Bruchstelle. I 296 — grosses gestieltes, Ohrpflock der *Mictecacinaatl* I 277 — in der Hand der *Hancueyê*, bei der dreizehnten Nachtstunde. II 205.
- Auge**, rechtes, mit dem Tageszeichen *acatl* (s. *ome acatl*) bei *Tezcatlipoca* verbunden. I 282 — mit *acatl* bei *Tlaloc* verbunden, Feuerbohren oder Ausbohren des Auges andeutend. II 301 — der *Tlaçolteotl* mit *tecpatl* verbunden. II 301 — *Quetzalcouatl*'s mit *quiauitl* verbunden. II 302.
- Auge, von Punkten umgeben**, Ausstreuen der Maiskörner (zu Weissagungszwecken) bedeutend, beim dritten der sechs Götterpaare. II 174.
- Auge der Nacht**, der Mond. II 86.
- Augen**, Dunkelheit bezeichnend. I 27, 99, 126, 127, 202, 249 — s. nächtliches Haar. — s. langgestielte —. — s. vier halbe —. — 30 bzw. 36 halbe —. II 284 — dazwischen Knochen. II 284.
- Augen**, an den Ohren *Xochipilli*'s s. Ohren — herausgerissene, ein Paar, Determinativ beim Todesgott, Ballspieler des Südens. II 117 — auf der Flughaut des *Tlaczinacantli*. II 60 — am Schwanzende der das Kaninchen im Rachen haltenden Schlange, der Himmelsschlange. II 64, 65, 68 — verbundene, s. *Tezcatlipoca Ixquimilli* — s. schwarze, rothe Göttin der Sünde — bei den Richtern, in den dreizehn Tagen des zwölften Tonalamatl-Abschnittes. II 250.
- Augenbemalung**, weiss, ringförmig, beim Tanzgott (*Ueucogotl*). II 188, 189.
- Augenbinde**, s. *ixquimilli*.
- Augenbraue**, ist rund beim Totenauge. II 52.
- Augenbrauen**, langgestielte Augen ihnen aufgesetzt bei den vier Federschlangen. II 299.
- Augenfiguren**, weisse, auf schwarzem Grunde — s. *tenixyo*.
- Augenflecken** der Wachtelfedern. II 290 — s. schwarze Federn mit weissem Endfleck.
- Augenkrankheiten**, s. äusserliche Krankheiten.
- Augenring**, aus *tiçatl*, beim Tänzer. II 224, 282 — blau, bei *Tlaloc*. I 109, 237; II 36, 234.

- Augenschlitz** *Xipe's*. I 167, 178, 230, 270; II 18, 30, 256 — bei der *Tlaçoteotl*. I 230; II 18, 30.
- Augenstreifen**, *cicillallô*, beim Puma, dem Thiere des Südens, neben dem linken Beine des knochenfarbenen *Quetzalcouatl*. II 54.
- Augenwinkel**, um ihn herum ein oder zwei rothe Linien gezogen bei *Xochipilli*-Figuren. I 78, 101, 135, 222, 246, 353; II 175 — besonderes Abzeichen des Sonnengottes. II 51 — nimmt den nackten Leib des die Stufen der Pyramide hinabgeworfenen geopfert knochenfarbenen *Quetzalconatl* in der tiefsten Hölle auf. II 52 — veranschaulicht den Erdboden. II 290.
- cipactli-Stacheln*, eines grünen *Tlaloc*. II 43 — an der Stachelkeule. II 163.
- cipactli-Streifen*, stacheliger, auf ihm liegt die gelbe Erdgöttin beim Baume der Mitte. II 105, 107.
- cipactli-Viereck*. II 47 — umschliesst die tiefste Hölle im Norden der Unterwelt. II 52.
- cipactli-Zeichnung*, (s. *cipactli*-Haut; s. Schildkrötenschalenzeichnung). II 109.
- Cipactonal*, einer der vier alten Weisen, die in *Tamoanchan* den Kalender schaffen. I 147, 185; II 169 — in *Tamoanchan*, die sechste Nachtstunde und die obere Region bezeichnend. II 191 — als Name für *Itztlacolinhqui* angegeben II 250 — Weiterentwicklung des Begriffes Stein zum Begriffe Erde. II 250 — s. *Oxmoco*.
- Cipactonal und Oxmoco*, im Zyklus von 52 Jahren *Quetzalconatl*-*Tezcatlipoca* gegenüber dargestellt. I 147 — für *Tonacatecutli*, *Tonacaciuatl*, die Vertreter des Ostens eintretend. III 3.
- cipaquecll* = *cipactli*. I 146.
- Cipaquecona*, Name *Itztlacolinhqui*'s s. *Cipactonal*.
- citlalcouatl*, „Sternschlange“, dem Dämon des Südens (*quauhtli*) gegenüber, im Süden der Unterwelt. II 64, 65, 68 — s. Himmelschlange.
- citlalcueitl*, Gürtelbehang, mit rasselnden Schneckengehäusen, bei der *Tlaçolteotl*. I 182; II 217, 306 — der *Itzpapalotl*. I 182; II 262 — „Stern-Enagua, Stern-Hüfttuch“, aus Schneckengehäusen bestehender rasselnder Gürtelbehang der Erd-(Mond)-göttinnen. II 46, 217 — der zwölf tanzenden *Cuateteô*. II 46 — der die Unterwelt verhüllenden Erdgöttin. II 49.
- Citlalicue* = *Citlalinicue*, Gemahlin *Citlallatonac*'s. I 186.
- citlallachtli*, „Sternballspielplatz“, Sterne in der Nähe der *Ursa mayor*, = *Tezcatlipoca*. I 149, 292 — im Rachen der rothen Feuerschlange des Codex Nuttall. II 40.
- Citlallatonac*, Himmels-gott = *Tonacatecutli*, *Ometecutli*. I 55, 79 — seine Gemahlin: *Citlalicue*. I 186 — als solcher *Xihitecutli* aufgefasst. II 295 — die Kinder beider sind: *Quetzalconatl*, *Uitzilopochtli*, *Tezcatlipoca*, *Tonacatecutli*, *Yonaltecutli*, *Tlanizcalpantecutli*, *Itzpapalotl*. I 186.
- Citlalin icue*, Himmelsgöttin = *Tonacaciuatl*, *Ometecutli*. I 55; II 298 — Begleitbild im dritten Tonalamatl-Viertel. I 55. s. *Ilamatecutli*, bewohnt den dreizehnten der dreizehn Himmel. II 294, 298 — bezeichnet die dreizehnte Tagstunde. II 298 — s. *Ometecutli* und *Ometecutli* — s. *cocho*.
- citlalpol*, „grosser Stern“, Name des Planeten Venus. II 143, 162 — s. *uei citlalin*.
- citlaxonecuilli*, Sternbild. I 262.
- citli*, „der Hase“, bei Mendieta für *Tlanizcalpantecutli* gesetzt, missverstanden statt *cutl* (Gott der Kälte). II 145, 247.
- ciua*, „Weiber“. I 154
- Ciuacouatl*, Göttin von *Colhuacan*. I 166; II 127, 128, 273 — mit Totenschädel und Jaguarpranken dargestellt. I 22, 23 — Göttin der *moçinaquetzque*. I 156; II 87, 218, 219 — Lied an sic. I 174; II 127, 128 — Trachtbesonderheiten mit *Ilamatecutli* gemeinsam. I 188 — verkörpert den Mond als Widerpart der Sonne. II 86 — Repräsentantin der Mondgöttin *Tlaçolteotl*. II 161 — *Mictlantecutli* gegenüber bei der ersten Nachtstunde. II 181 — gegenüber *Mictecaciuatl*, der dritte der fünf Hüter der vier Venusperioden. I 277, 278 — eines der Gesichter der *Quaxolotl*. II 187 — mit der Gesichtsbemalung des Feuergottes. I 32 — Steinidol von *Cozacatlan* (Distrikt Tehuacan). I 22 — mit rothem Gewande und Feueropfer. I 30 (s. *Chantico*) — Frau, die zuerst Zwillinge gebar. I 32 — = *Quilaztli*. I 156, 166; II 86, 218, 273 — = *Ilamatecutli*. I 188, 192 — dargestellt beim *Atamalqualiztli*-Fest. I 211 — beim *Tecuilhuitontli*-Feste auf dem *tlachtli*, den Westen vertretend. I 290 — auf dem Boden liegend, über ihr erheben sich die Bäume des Ostens, Nordens, Westens, Südens. II 104.
- Ciuacouatl-Quilaztli*, heisst bei Durán *Chantico* — (s. dort). II 273.
- Ciuapilli*, s. *Ciuatrotl*.
- Ciuapipiltin*, s. *Cuateteô* — *utlamaxac nemini*. I 28 — *otlamaxac ciuapipiltin*. II 54.
- Cuateotl*, je eine schwarze und rothe, begleitet den lebenden *Quetzalconatl* auf seinem Wege zum Hauptraum des Nordens der Unterwelt. II 49 — je eine gelbe und blaue, den toten *Quetzalconatl* auf seinem Wege ebendahin. II 49 — Göttin des Westens, Begleitbild im dritten Tonalamatl-Viertel = geopfert Frau, Seele der im Kindbett gestorbenen Frau. I 60 — s. *Macuilxochitl*, ihre Parallele — s. *Itzpapalotl*, *Ilamatecutli* — ihr Gegenstück der *ilhuicac yauh*. I 187, 274 — der *Xocotl*, *Cucucetzin*. I 190 — = *chiquatl* „Käuzchen“. I 190 — blau. II 46, 49 — gelb. II 46, 49 — roth. II 46, 49 — weiss. II 46 — schwarz II 49 — ihr natürlicher Genosse ist *Auiateotl* (*Xochipilli*). II 51 — Repräsentantin der Mondgöttin *Tlaçolteotl*. II 160, 161.
- Cuateotl-Figur*, je eine eskortiert den in den Osten der Unterwelt (*cipactli*-Viereck) eintretenden schwarzen und rothen *Quetzalconatl*. II 47.
- Cuateteô*, Göttinnen des Westens. I 272; II 13, 20, 22, 87, 264 — in Fünzfzahl vorhanden. I 68, 187, 272, 299; II 20, 50, 85, 86 ff, 264 — Aussehen und Tracht.

- II 85—93 — mit einem Gefässe am Nacken abgebildet. I 68 — Heiligthümer auf Kreuzwegen. I 39 — von weisser Körperfarbe. I 187 — haben Skelettkopf und Adlerklauen. I 285; II 19, 20, 50 — Seelen der im Kindbette gestorbenen Frauen und weibliches Gegenstück der geopfertenen Krieger. I 165, 186, 230, 272; II 13, 75 ff., 86 ff., 239 — die zu Göttern gewordenen weiblichen Toten. I 348. — decken sich mit den *Tzitziminé*. - Feuerwurm**, bildet den Rachen der Aschenkiste *nexxaxitl*. II 34.
- Feuerzärimonien** an Tagen des vierten Tonalamatl-Fünftels (Süden) in den Büchern des *Chilam Balam*. II 9.
- Feuerzungen**, im Wasserstrom bei Regengotte des Südens (*Xihutecutli*). I 352.
- Feuerzünder**, s. *Ome acatl*, *Tezcatlipoca*. I 146.
- feuriges Getränk**. I 114; II 173 — durch zwei verschlungene Feuerschlangen bezeichnet. II 173.
- Finger** einer *mocinaquetzqui*, einer im Kindbette gestorbenen Frau, von den Kriegerinnen begehrt, um ihn als Lähmung und Entsetzen verbreitenden Zauber in ihren Schild einzusetzen. II 89.
- Fisch**, s. *michin*. — kaimanartiger = *cipactli*. I 82 — s. *cipactli*, *acipactli*. — = Erde, von *Mani* aus dem Meere mit der Angel gehoben. I 77 — fruchtbares Thier (s. *Mayauel*). I 138 — enthauptet, beim Baume des West-*tzompantli*. II 116 — gebratener, von der *Chantico* gegessen; der aufsteigende Rauch erzürnt *Tonacatecutli*, der sie in einen Hund verwandelt. II 273, 280.
- Fische**, Menschen des *Atonatiuh* in solche verwandelt. I 204.
- Fischer**, s. *michmalo*.
- Fischer mit Handnetz**, Begleitbild bei *Xochipilli*, Regenten des elften Tageszeichens *ogomâtl*, bezeichnet das *Chalchimmichoacan*. I 136, 137.
- Fixsternhimmel**, seine Bewegung führt auch die Sonne am Firmament wieder empor. II 308.
- Seler. Codex Borgia III.
- Fixsternwelt**, ihr Vertreter der *Auiateotl* (Süden). II 307.
- flacher Stein**, *itztapalli*. II 288.
- Flamme**, s. *tlatl*, *tlaxochtili*, *tlapapalotl*. — ihr Auseinandergehen deutet der Name *Quaxolotl* der *Chantico* an. II 276.
- Flammen**, schlagen aus dem *tlaquimilolli nexquinilli* (Aschenpacket) heraus auf der Plattform des Tempels der Nacht. II 33 — am spitzen Strohdach des Tempels *Xolotl's*. II 35 — am Zeichen *olin* in dem Kreuzungspunkte des Bandviereckes. II 284 — gelbe Federn am Feuerbohrer der vier Feuerreißer. II 118 — Edelsteinbänder, beim Feuerbohrer des Feuerreißers des Nordens. II 118.
- Flammenpfeil** der im Osten aufgehenden Sonne, *cuegalmamazçô mitl*. II 86.
- Flammenzungen** der Schlange, die am *tlacuiltl* des Nordens (beim rothen Skelett) herabhängt. II 307.
- Fleck, Flecken**, s. roth, gelb, schwarz, blau. — s. schwarzgefleckt, buntgefleckt. — s. Schlangenflecke. — s. Jaguarflecken. — s. Backenfleck. — s. Augenflecke. — s. schwarze Federn mit weissem Endfleck.
- Fleckenkrankheit** *mencxualiztli*. II 97.
- Fledermaus**, s. *çotz*. — kopfabreissende. — s. *c'ama çotz*. — s. *tzinacantli*, *tlacatzinacantli*. — s. Herzausreisser. — herabkommende (*tzinacantemoc*), Determinativ der *Mayauel* als der fünften der fünf Formen der *Tlaçolteotl*, Vertreter der Mitte. II 85.
- Fledermausgott**, spielte eine grosse Rolle in gewissen Theilen des Mayagebietes und vielleicht auch bei einigen anderen der Urstämme. II 60 — s. *Tlacatzinacantli*.
- Fleisch**, s. Schale mit Thierfuss. — s. *manik* (Maya).
- fleischlose Knochen** des Todesgottes. I 244.
- fleischloser Unterkiefer**, der *Itzpapalotl*. I 181; II 195 — der *tlamatecutli* (*Itzpapalotl*). I 185 — des Pulquegottes als Todesgott. I 251 — des Todesgottes. I 297 — der Todesgöttin. I 297; II 2, 120, 177, 181, 187 — der *Quaxolotl-Xochiquetzal*. II 187 — bei *Oxomoco* und *Cipactonal* der sechsten Nachtstunde. II 191.
- fleischloses Tötengebiss** der *Itzpapalotl*. I 181, 182, 185; II 262.
- fliegender, Quetzalcouatl**, II 32.
- Florenz**, Biblioteca Laurenziana, s. Sahagun-Manuskripte.
- Flöte**, vom Abbilde *Tezcatlipoca's* geblasen. I 148.
- Flughaut**, zwischen den Armen ausgespannt, mit Zacken umsäumt, beim *Tlacatzinacantli*. II 60 — mit Klauen besetzt. II 60 — an deren Stelle zackig umsäumte Anhänge. II 61.
- flügelartige Behänge** aus gelben Federn, an den Unterarmen *Xolotl's*, II 35, 36.
- Fluss** der Unterwelt, s. Unterweltsfluss.
- Folge** der Himmelsrichtungen. II 4 — s. sakraler Turnus.
- Forstmann**. I 238, 313, 350; II 14, 15.
- Frau**, im Wasserstrom bei der *Chalchiuhtlicue*. II 225 — am Mahlsteine. I 213 — s. erste Frau. — s. *tlancueye*, — gelbe, s. *Chantico*. — als Kriegerin frisiert, vertritt *Tlaçolteotl*, als zweiter der sechs Himmelswanderer (s. *Cinacouatl*, *Cuateotl*). II 160–161 — geopfert = *Cinateotl*. I 60 — nackte = *Tlaçolteotl*. I 60.
- Frau mit abgeschlagenem Kopfe**, ist eigentlich der Mond (s. geköpfte Göttin). II 184 — Sinnbild der fruchtbaren Erde. II 184.
- Frau mit Adlerfängen** (*Itzpapalotl*). I 181.
- Frau mit einem Blütenbaume**, an Stelle des abgeschlagenen Kopfes, bei der zweiten Tagstunde. II 183, 184.
- Frau mit Männerhaartracht** in Tanzstellung = *maqui*, Genossin der unverheiratheten Krieger, bezeichnet die dritte Nachtstunde. II 185 — die zwölfte Nachtstunde. II 204.
- Frau mit vierhundert Brüsten** = *Mayauel*. I 113, 138, 275, 304; II 117.
- Frauen**, weisse, die *otlamarac* (*manca*) *cinapiltin*. II 91.
- Frauenkopf**, bezeichnet auf Maya-Monumenten die Zahl Eins (s. daselbst). I 217.

Frauenkopf mit dem chichan-Zeichen auf dem Scheitel, in Maya-Handschriften der mex. *Chalchihuitlicue* entsprechend. I 318–319.

Frazer. I 240.

Fressen des eigenen Kindes, durch die *Mictēcaciūtl*. I 277 — Ideenverbindung mit Maul, Höhle, hohl, Echo. I 92.

fressendes Feuer, in der *Chantico* verkörpert. II 273 — mit dem Hunde (dem beissenden Thiere) in Verbindung gebracht. II 273.

Freudenmädchen, s. *maqui*. — s. *aviāni (mē)*. — Ihre Patronin s. *Xochiquetzal*.

Frömmigkeit, s. *omītl nītztlī* (I 50) — Zeitalter der —, die alte Zeit. II 206.

Frösche, an Kultusstätten des Regengottes. I 100.

Frost, s. *cētl*. — s. *Itztlacoliuhqui*.

fruchtbare Erde, Frau mit abgeschlagenem Kopfe (s. geköpfte Göttin, s. *Conatlicue*). II 184.

fruchtbare Thiere, s. Kaninchen (*tochtli*). I 138 — s. Fisch (*michin*). I 138, 275; II 116 — s. Leguan, Eidechse (*cuetzpālīn*). I 97, 107; II 168 — s. *cipactli*.

Fruchtbarkeit, veranschaulicht durch die Phallus-tragenden Begleiter der *Tlaçolteotl* am *Ochpanitztlī*-Fest. I 159 — Repräsentanten *Mixconatl*, *Ah bolon tz'acab* (Maya). I 318 — s. *cipactli*, Fisch, *cuetzpālīn*. — s. *acatl*-Jahre; *calli*-Jahre. — s. *olpīyauac*-Banner. — s. *tlecuilli*, Räucherwerk. — s. Westen, *Tamoanchan*. — s. *Chicauāztlī*. — Symbol der Fruchtbarkeit der Pulque (*octli*). II 117, 197 — Edelsteine. II 204 — Zeichen dafür, eine Schale mit Maiskolben. II 235 — s. Frau mit abgeschlagenem Kopfe (Mond). — s. Brüste mit Blüten. II 184.

Frühjahr, *Xipe Totec's* Fest. I 149.

Frühlingsgott, *Xipe Totec*. II 18, 132.

Frühlings Tag- und Nachtgleiche, in diese fällt das *Tecuīlhuitōntli*-Fest. I 290.

Fuchs, Tanzgott. I 99.

Fünf, Gottheit dieser Zahl auf Maya-Monumenten ein alter Gott mit der Hieroglyphe „Stein“ auf dem Kopfe: = mex. *macuīl tēcpatl* (?). I 217 — diese Zahl bei *Macuīlxochitl* und den fünf *Auiateteō* durch die weisse Handmündbemalung (*motēmmacpalhuiticac*) ausgedrückt. I 272; II 76, 77, 96 — diese Zahl bedeutet das über das Normale (die heilige Vierzahl) hinausgehende. II 96 — s. *macuilli*. — *ma-cuilli* „die Hand genommen“. II 96.

fünf Auiateteō. II 93–103 — s. fünf *Ciuateteō* und fünf *Auiateteō*. — ihre Geburt aus einem *tēcpatl*. II 97, 98.

fünf Ciuateteō. I 68, 187, 272, 299; II 20, 75–93, 102, 103 — s. fünf *Tzitzimimē*.

fünf Ciuateteō und fünf Auiateteō. II 75–103 — kombiniert dargestellt in fünf Paaren auf dem Mss. Mex. No. 20 (Paris, Bibl. Nat.). II 102–103.

fünf Dreizehnheiten viergliedriger Säulen; so angeordnetes Tonalamatl. II 4, 5.

fünf Fahnen, bei *Tonatiuh*. II 289.

fünf Formen der *Tlaçolteotl*, fünf Mondgöttinnen. II 77–85, 91 — s. *Chicunauī acatl*, *Nauī tēcpatl*, *Chiquacēn acatl*, *Chicuei acatl*, *Cē quauhtli*.

Fünf Gestalten vom Speere des Planeten Venus getroffen, in der Dresdener Maya-Handschrift. I 336, 341 — s. *Ah bolon tz'acab*, *balam*, Gott mit dem *kan*-Zeichen, *aac*, *holcan*.

fünfgliedrige Säulen, s. Tonalamatl.

fünf Götter der Missgeburten. I 199.

fünf Götter des Ostens, der Dresdener Maya-Handschrift (Bl. 24). I 309.

fünf Götter des Südens, s. *Uitznauā*, *Auiateteō*.

fünf Gottheiten des Planeten Venus, in der Dresdener Maya-Handschrift und im Codex Borgia. I 334, 334–336.

fünf Göttinnen des Westens, s. *Ciuateteō*.

fünf Himmelsrichtungen, ihr Turnus entweder Osten, Norden,

Westen, Süden, Mitte (bezw. Westen, Süden, Osten, Norden, Mitte) oder Osten, Norden, Mitte, Westen, Süden (bezw. Westen, Süden, Mitte, Osten, Norden). I 238 ff., 257, 337; II 4, 102, 149, 155 — ihnen entsprechend fünf Formen *Xolotl's*. I 199; II 54 — *Tezcatlipoca's*. II 9, 10 — ihnen entsprechend fünf Thiere, beim knochenfarbenen *Quetzalcoatl* auf dem Kreuzwege. II 54 — ihnen entsprechend fünf merkwürdige schwarze Figuren. II 41, 42 — ihnen entsprechend sind die neun Herren der Stunden der Nacht im Codex Fejérváry-Mayer vertheilt. I 219, 237; II 292 — ihnen entsprechend die fünf Hüter der Venusperioden. I 241, 327–336; II 136–157 — die viermal fünf Hüter der Venusperioden. I 238–280 — dabei mit dem Westen beginnend. I 241, 329; II 140, 149 — ihnen entsprechend fünf Gestalten vom Speere des Planeten Venus getroffen, in der Dresdener Maya-Handschrift. I 336; II 153–155 — ihnen entsprechend die toten Götter oder die Abendsternreihe. I 337–341 — ihnen entsprechende Farben: weiss (Osten), gelb (Norden), blau (Westen), roth (Süden), schwarz (Mitte, unten). II 10 — ihnen entsprechend fünf *Ciuateteō*, fünf *Tzitzimimē*. II 20, 85 — ihnen entsprechend fünf Paare je einer *Ciuatēotl* und eines *Auiatēotl*. II 102–103 — ihnen entsprechend je zwei *Ueneteō* und je zwei *Ciuateteō*. II 19, 20 — ihnen entsprechend fünf mit Blitz versehene, aus einem Kautschukball hervorkommende Figuren, den Aufgang des Planeten Venus andeutend. II 27 — ihnen entsprechend fünf Fahnen bei *Tonatiuh*. II 289 — Begleitbilder bei den fünf Formen der *Tlaçolteotl*. II 78.

fünfhundertvierundachtzigstägige Periode = synodische Umlaufzeit des Planeten Venus. I 238, 239, 327, 350; II 137 — mittlere Länge 583 Tage 22h 6' 40". II 136 — = $29 \times 20 + 4$, = $44 \times 13 + 12$. II 137 — diese Periode ist in der Dresdener Maya-Handschrift zerlegt in Abschnitte von 90, 250, 8 und 236 Tagen.

fünf im Himmel Thronende, Gottheiten der Abendsternreihe in der Dresdener Maya-Handschrift. I 341.

fünf Jahre, aufeinander folgende. I 349 — folgen auf die Zeit der oberen Konjunktion des Planeten Venus, gerechnet vom Tage der Verschmelzung des Planeten mit der Sonne (*nauī olin*, *4 caban*). I 351.

fünf Kautschukugeln, auf dem rothen *tlachtli* des Nordens der Unterwelt, wo der knochenfarbene *Quetzalcoatl* besiegt wird. II 51.

fünfmal geräuchert, der Sonne als *Yonaltecūtlī* in der Nacht. I 224.

fünf Mondgöttinnen. II 77–85.

fünf Perioden, s. Scheibe, Trapez und Schlangenzunge — s. fünf Venusperioden.

fünf Schalen, Pulque (*octli*) trinkt der *Cuērtēcatl*. II 96.

fünf Schlangen, bunte und rothe, kommen aus dem Spalte zwischen der knochenfarbenen und der *chalchihuitl*-Schale bei Darstellung der Geburt der *Ciuateteō* heraus. II 91 — verschiedenfarbige (*cicītlallō*, blau, gelb, roth, grün) bei der Darstellung der Geburt der fünf *Auiateteō*. II 98.

fünf schwarze Figuren, aus einem *xīuhcoatl* herausgetreten. II 41, 42 — vom alten Ehepaare begrüsst. II 41.

fünf Sonnenjahre. I 350.

fünf Tage vor Beginn des neuen Jahres, Zärimonien an ihnen bei den Maya von Yucatan zu Ehren *Yaxoc ah mūt's*. I 303 — letzte des Jahres, s. *nemontēmi*. — s. *xma kaba kin* (Maya). — s. Jahresschluss-Zärimonien.

fünf Tezcatlipoca-Figuren (schwarz, weiss, gelb, roth, blau). II 9, 10.

fünf Thiere, beim knochenfarbenen *Quetzalcoatl* auf dem Kreuzwege. II 54.

fünf Tlaçolteotl-(Ciuatēotl)-Gesichter, am Seile des Hauses der rothen Schlange, sind *Tzitzimimē*. II 20.

fünf Tlaloc-Figuren, bezeichnen die fünf Richtungen. II 341

- bis 348 — bei den vier Jahren und vier Tonalamatl-Abschnitten. I 341—348 — bei den Jahren und Venusperioden. I 349—353 — sind Verkörperungen *Tezcatlipoca's* (Norden), *Tlauizcalpantecutli's* (Westen), *Xiuhtecutli's* (Süden), *Quetzalcouatl's* (Osten), *Xochipilli's* (Mitte). I 351—353.
- fünf Tonalamatl-Abschnitte**, entsprechen dem Osten, Norden, Westen, Süden, Mitte. II 4, 5.
- fünf Tzitzimé**, am Seile des Hauses des Südens. II 20 — s. fünf *Ciuateteó*.
- fünf Uitznaua**, die fünf Südlichen, Gegenstück der fünf *Ciuateteó*. II 13 — s. *Auiteteó*.
- fünf Venusperioden**. I 327—336; II 137 — (im Cod. Vatic.) durch fünf Gebilde aus Scheibe, Trapez und Schlangenzunge (s. *yacariuitl*) bezeichnet. II 138.
- fünf Weltgegenden**, s. fünf Himmelsrichtungen.
- fünf Weltgegenden und ihre Gottheiten**. II 103—126.
- fünfte Richtung**, Richtung nach unten. — s. oben—unten. — s. Feuergott. — s. Mitte. — durch den Pulquegott repräsentirt. I 251 — s. oben.
- fünfte Venusperiode**, an ihrem Ende droht dem *altepetl* allgemeiner Weltuntergang. II 155, 156.
- fünfter Tlaloc**. I 347, 348.
- fünfte Weltgegend**, Land des Reichthums. II 107 — Mitte, durch *Xiuhtecutli* repräsentirt. I 73, 79, 118 — durch *Iztac Miccouatl*. — durch *Tonacatecutli*. I 79 — durch *Mictlantecutli*. I 238, 241, 244, 250 — durch *Tezcatlipoca irquimilli* repräsentirt. I 269 — Mitte, durch die fünfte Venusperiode repräsentirt, mit dem Anfangstage *matlactli olin*. I 329, 333, 335 — durch eine *Tlaloc*-Figur dargestellt. I 345, 347, 348 — durch eine schwarze Figur mit grossem Daunenfederball auf dem Kopfe und *tlachieloni*-artiger Scheibe am Halse dargestellt. II 42 — durch *Mayauel*, fünfte der fünf Formen der *Tlaçolteotl* dargestellt. II 84, 85 — Mitte = Erdinneres, *Tlillan*. I 296—299 — schwarzes Loch der Erde. II 3 — Mitte der Unterwelt, Reich des Feuers. II 72, 72—75 — der Himmel, der Wohnort der toten Krieger. I 348 — durch die (zu ergänzende) Tageszeichensäule *acatl*, *tecpatl*, *calli*, *tochtli* bezeichnet. II 15 — durch den *tzontemoc* oder *tzitzimil*, d. h. einen Stern repräsentirt. II 132 — ein *tzitzimil*-Gesicht (bei den vier Federschlangen). II 299 — s. Baum der Mitte. — Mitte, Unten-Oben. II 4 — Mitte, s. *Tlauizcalpantecutli*, Regenten der fünften Venusperiode. II 139 ff., 155 — Mitte, durch *Yacatecutli* vor dem Kreuzwege repräsentirt = Feuergott. II 165 — durch das *altepetl* repräsentirt (bei der fünften Venusperiode). II 155 — in der Dresdener Maya-Handschrift, durch ein mit *caban* erfülltes Gebilde bezeichnet. II 108 — s. Oben.
- fünfte Weltperiode** *Olintonatiuh* „Erdbebensonne“. I 204 — ihr Zeichen ist *nauí olin*. I 204.
- fünfter Baum**, s. Baum der Mitte.
- fünfter Himmel**, bewohnt von fünf Göttern (*tonaleque*). II 292 von der *Tlaçolteotl*. I 294.
- fünfundzwanzig Erscheinungsformen der Xochiquetzal**, in den fünfundzwanzig Götterpaaren. II 207.
- fünfundzwanzig Götterpaare**, die —. II 178—208 — stehen in Beziehung zu den sechs Götterpaaren. II 177, 178 — ihre Bedeutung dreizehn Stunden des Tages und dreizehn Stunden der Nacht. II 180, 207 — dreizehn Tage, wo der Mond am Abend- bzw. Morgenhimmel sichtbar ist. II 207—208.
- fünfundzwanzigstes Götterpaar**, als dreizehntes konstruiert mit Anspielung auf den dreizehnten Himmel *Tonacatecutli's* und *Tonacaciuatl's*. II 178, 179 — bezeichnet die dreizehnte Tag- und Nachtstunde. II 180.
- fünf Venusperioden**, ihre Hüter. — die 4 mal 5. — die 13 mal 5.
- fünf Weltgegenden**, durch neun Herren der Nacht repräsentirt. I 237, 238 — den fünf Venusperioden entsprechend. I 241, 327—329; II 137 ff.
- Fuss**, durch den Kopf einer rothen Blutschlange (*tlapalcouatl*) ersetzt, bei der *Tlaçolteotl*, dem zweiten der sechs Himmelswanderer (im Cod. Fejérváry). II 159 — durch einen Schlangenkopf ersetzt, beim fünften der sechs Himmelswanderer (*Tezcatlipoca* des Südens) im Cod. Fejérváry. II 163 — s. abgerissener Fuss, *Tezcatlipoca's*, *Xochipilli's*, *Tlauizcalpantecutli's*.
- Fuss abgerissener**, *Acxomocuil*, Name eines der Genossen *Yacatecutli's*; ihm entspricht *Hurakan* (Qui'che) und *Tezcatlipoca*. II 128 Anm. 2.
- Fuss**, linker, über ihn hat das Tageszeichen *ocelotl* Herrschaft I 280 — unter ihm das Tageszeichen *cipaetli* bei *Tezcatlipoca* angegeben. I 281 — bei *Xochipilli*. II 135 — *Macuixochitl's*, mit dem Tageszeichen *tochtli* verbunden. II 302 — *Quetzalcouatl's* mit dem Tageszeichen *maçatl* verbunden. II 302.
- Fuss**, rechter, *Tezcatlipoca's*, mit dem Tageszeichen *ocelotl* verbunden. I 282 — *Xochipilli's*, mit *eccatl* verbunden. II 135 — *Tlaloc's* des Ostens, mit dem Tageszeichen *cipaetli* verbunden. II 300.
- Fuss der Feinde**, gelähmt von der *mociuaquetzqui*. II 90.
- Füsse**, verkrümmt, bei der fünften der fünf *Ciuateteó*. II 91, 93 — bei *Xolotl-Nanauatzin*. I 191.
- fussloser Mond** = *Tezcatlipoca*. II 12.
- Fussspur**, bezeichnet den Weg (*ótlí*). I 292; II 197 — auf dem Gewande der Erdgöttin. Tafel 5, oben — auf der Backe der Erdgöttin. Tafel 47, unten rechts. — herabkommende = Empfängniss. I 32; II 200 — gelbe, auf dem von einer menschlichen Hand gepackten Schwanz der Blutschlange, bei der *Chalchihuitlicue* dargestellt. I 229 — zwei = Geburt von Zwillingen. I 31, 32 — diakritisches Zeichen. I 17 (s. *cuetzpálin*, s. *kan*).
- Fussspuren**, s. zwei —.
- Fusswaschen der Götter**, s. *mocxipacaya yn omitotique teten*.
- Gang der Zeit**, s. Sonne, Mond und Morgenstern. II 292.
- Garcia, Fray Gregorio**, Verfasser des Werkes „Origen de los Indios“. II 164.
- gebänderter Achat**. II 246.
- Gebären** = im Kriege einen Gefangenen machen. I 24, 156, 158, 166; II 48, 49, 218 — s. *Çacacàli*. — s. Fussspur. — s. *tlamani temani*.
- Gebärende Tlaçolteotl**. I 157; II 219 — *Xochiquetzal*. II 186.
- Gebet** des Kaufmanns an den Feuergott. I 118 — des Wanderers bei den Maya an *Ekchuah*. I 321, 322 — an *Tezcatlipoca*. II 169 — der Hebamme. I 101 — eines Maya-Indianers von *Xcanchakan*. I 313.
- Geboren habend**, s. Bauchfalten.
- gebrochene Doppellinie**, schwarze, in der Gesichtsbemalung *Cinteotl's* (s. winklig gebrochener Streifen) ist ein Symbol der in Felder getheilten Erde. II 134.
- Geburt**, dargestellt bei der *Tlaçolteotl* des dreizehnten Tonalamatl-Abschnittes (im Codex Borbonicus). II 252 — angedeutet bei der *Xochiquetzal*. II 186 — = Erbeuten eines Gefangenen. I 24, 156; II 49, 87, 218 — = Kampf. I 156; II 218 — erleichtert durch *tlaquatzin*, s. dort. — bei der Geburt Gestorbene, s. *mociuaquetzqui*, *mociuaquetzqui* — Symbol der Geburt, s. *tecciztli*. (I 49) — des Kindes, Herausziehen einer Kostbarkeit aus dem Leibe. I 240 — s. Blume, *cozcatl*. — verursacht durch den Mond. I 50 — des Priesters. I 49, 50, 69 — des Gottes der Jagd und des Krieges (?). I 69 — des Feuers. I 69 — aus dem Wasser, bei *Nanauatzin* = Entstehung aus dem Blitzgott *Xolotl*. I 197, 200; II 36, 52, 53 — des Menschenlebens und Geburt der Feldfrüchte, in einander gehende Begriffe. I 207; II 42 — s. *tlamanimé*, *temani* — s. Hebamme. — s. Haus der Geburt. — s. *Tamoanchan*. — s. Westen.
- Geburt der Sonne**, Erzählung davon. II 144, 145 — über

- dem Meere des Ostens, auf dem rothen *tlachtli* des Ostens der Unterwelt, durch ein rothes Skelett dargestellt, aus dessen Vulva eine mit gelber Farbe gemalte Figur herauskommt. II 48 — Verbrennung *Nanauatzin's*, schildert und erklärt, wie die Geburt des Mondes, das Wiederlebendigwerden des Morgensterns. II 55, 67 — Zeit vor der , s. *chi k'ekum chi a'kab*.
- Geburt der toten Sonne**, durch *Yonaltecutli* veranschaulicht. II 49.
- Geburt des Blitzes**, d. h. *Xolotl's*, aus der Wolke. II 53.
- Geburt des Maises**, Ihre Darstellung. II 43, 45.
- Geburt der fünf *Auiateteô***, aus einem *tecpatl*. II 97, 98.
- Geburt der fünf *Auiateteô***. II 90, 91.
- Geburt *Tlauizcalpantecutli's***, durch zwei weiss und roth punktirte Meerschneckengehäuse angedeutet. II 71.
- Geburterleichterungsmittel**, s. *tlauatzin* (Beutelratte). — Fellstreifen. II 186.
- Geburtsgöttin**, Patronin des Schwitzbades. II 13.
- Geburtsgöttinnen**, die fünf *Ciuateteô*. II 50.
- Geburtshelfergott**, *Tezcatlipoca* der zehnten Tagstunde. II 201.
- Geburtsstellung**, (*mamaouhticac*), *Tlaçolteotl*. I 154, 156, 276, 303 — *Xochiquetzal*. II 186 — *Tonacatecutli*. II 28, 29, 211 — zugleich Coïtusstellung. I 156 — s. *maana*, *moteteuana*, *mamaoua*.
- Geburtstag** des Regengottes (*Chac*), die mit der Zahl neun verbundenen vier Tage des ersten Tonalamatl-Fünftels (Osten), in den Büchern des *Chilam Balam*. II 6, 15 — s. *bolon imix*.
- Gedärme**, Herrschaft über sie hat das Tageszeichen *malinalli*. I 250 — gedeihende Maiskolben. II 302.
- Gedrehtes**, charakteristisch im Schmucke *Quetzalcoatl's* (des Windgottes). I 88.
- Gefäss**, mit einer Schale zugedeckt. I 68 (s. Schlangenzauberer). — schwarzes, mit rothem Mündungsrande, an einem Ende aufgebogen. I 68 — schwarzes, für Totendarbringungen. I 74, 231 — s. Edelsteingefäss.
- Gefangene** (*mamaltin*) = Huasteken (*Cuerteca*). I 158, 175 — sind die Männer der *Ixcuinanmê*. I 159, 173, 175
- Gefangener**, gebundener = Sklaverei. — Erbeuten eines, s. *temani*. — am Baum gebunden, Begleitbild zum dritten Tonalamatl-Viertel. I 64 — Darbringen eines Gefangenen durch die Erdgöttin = Geburt eines Kindes. I 24; II 213 gefesselter, beim Determinativ der *Tlaçolteotl* des Westens. II 81.
- Gefäss** der Dieseldorff'schen Sammlung mit Darstellung des Gottes in der Schale. I 315 — s. *Chamá* — mit dem Gesichte des Regengottes. I 109 — in der Hand der die vier Jahre bezeichnenden Regengötter. I 345 — der die Jahre und Venusperioden begleitenden Regengötter. I 349 — mit Blumen und Knochendolch (Opferblutschale), bei der sechsten Tagstunde. II 192 — mit dem verbrannten Gotte *Quetzalcoatl* und seiner verwehenden Asche. II 3 — mit einem Skelettgesichte, bei der Todesgöttin. II 3 — mit einem Totengesichte auf der Fläche. II 8 — weiss. roth. II 8 — mit zwei rechteckigen Streifen auf der Fläche (Kakaogefäss), auf dem Aschenwirbel. II 33, 34 — schwarzes, mit einem Brennholzbündel und einem *malinalli*-Busche, am Nacken der *Ciuateteô*, II 93 — der *Auiateteô*. II 98 — mit Mais, zwischen *Tepeyollotli* und *Tlaçolteotl*. II 219 — für Mais oder Speisen neben dem *teicpalli*, bei der vierten Venusperiode. II 150 — mit einer Blutschlange, bei der siebenten Nachtstunde. II 194 — mit einem Thierfusse, beim ersten der sechs Götterpaare. II 172.
- Gefässe**, mit Adlerdaunen gefüllt und einem Pfeilschafte darin, in die Gestalt eines *quauhtemoc* verwandelt. II 74 — mit Determinativen von Schmuck oder Kostbarkeit auf dem Wirbel der Region des grossen Windes. II 33, 34.
- gefleckt**, s. schwarz gefleckt. — s. Fleck, Flecken.
- gefleckte Schoten** = Kakaoschoten. I 319 — in einer Schale auf dem Kopfe des schwarzen Gottes der Maya-Handschriften. I 319.
- gefleckter Hund**, beim Feste des Gottes der Kakaopflanzer (*Ekchuah*) von den Maya geopfert. I 321 — s. weiss und schwarz gefleckt.
- gefleckter Vogel**, die Wachtel (*çolin*), Abbild *Xipe Totec's*. II 251.
- Gegensatz**, s. Farbengegensatz.
- gegensätzliche Götter**, *Quetzalcoatl* und *Tezcatlipoca*. II 73.
- gegensätzliche Stellung** des Mondes zur Sonne. II 90.
- Gegensätzlichkeit** der Richtungen. I 284 285; II 73 (Osten und Norden — Westen und Süden). — bei der Darstellung der Freuden und Leiden des Kriegers. - Jaguarstuhl**, auf ihm *Yacatecutli*, dritter der sechs Himmelswanderer. II 162.
- Jahr**, Hieroglyphe (Ring und Strahl, Trapez und Strahl). I 345 — auf dem Scheitel *Tlaloc's*. I 345 — s. Regenten des Jahres. — s. Götter des folgenden Jahres. — s. Bringer des Regenten der neuen Jahre (Bringer der Jahre).
- Jahre**, in historischen mexikanischen Bilderschriften durch Türkisscheiben und Ausstrahlungen bezeichnet. II 138 — fünf auf einander folgende. I 349 — haben den Wert von Ordinalzahlen, bezeichnen das 1., 2., 3., 4., 5. Jahr. I 350 — s. zweiundvierzig (42) —.
- Jahre und Venusperioden**, die —. I 349—353.
- Jahresanfang** bei den Mexikanern. I 342, 344 — landschaftliche Differenzen. I 342 — s. Neujahr, s. *Torcatl*.
- Jahresbringer**, s. Bringer der Jahre.
- Jahresdaten**, ihr Symbol eine Verschlingung einer Trapezfigur (eines Ringes) und eines Strahles. I 349; II 121 — im Codex Borgia auf Bl. 49—52. II 121—126 — bedeuten eine nach 42 Jahren vorzunehmende Regulirung der Jahreslänge. II 126.
- Jahresfeste**, durch zwei Hauptmarksteine in zwei gleiche Theile zerlegt, durch das zweite Fest (*tlacaripeualiztli*) und das eilfte (*Ochpaniztli*). I 160 — s. Totenfeste (I 68), s. *Uei miccaihuitl* — s. *Tlacaripeualiztli*. — s. *Ochpaniztli*. — s. *Titl* (*Uetzi in chiquatl*). — s. *Izcaltl*, *Mac*. — s. *Tepeilhuitl*. — s. *Tecuilhuitontli*. — s. *Uei tecuilhuitl*. — s. *Uei topoztlí* — s. *Torcatl* (Neujahrstest). — s. *Totl eco*. — eine Verschiebung durch Kalendereinschaltungen verhütet. II 126.
- Jahreslänge**. I 342; II 126 — s. Kalender, Chronologie — des mexikanischen Jahres von 365 Tagen macht nach 42 Jahren eine Korrektur von zehn Tagen (genau 10 Tagen 4 h 9' 15") nothwendig. II 126 — wirkliche, 365 Tage 5 h 48' 47½". II 126.
- Jahreslauf** der Sonne, Abbild und Parallele für ihren täglichen Lauf. I 207.
- Jahresschluss**, letzte Tage der *acatl*, *tecpatl*, *calli*, *tochtli*-Jahre sind die Tageszeichen *olin*, *eeratl macatl*, *malinalli*. II 123.
- Jahresschluss-Zärimonien**, in Yucatan I 303 — auf Bl. 25 bis 28 der Dresdener Maya-Handschrift dargestellt. II 123.
- Jahressymbol**, Trapez und Strahl (s. daselbst). II 74.
- Jalisco**, Staat der Republik *México*, in ihm wohnen die *Huichol*-Indianer. II 127.
- Januskopf**, der *Quarolotl-Xochiquetzal*, einerseits Kopf einer *Ciuacauatl*, anderseits Kopf *Tepegollotli's*. II 187.
- Johannes der Täufer**, Vorläufer des Herrn, Name des Feuers. I 116.
- de Jonghe**. II 124, 125, 292 — s. Histoyre de Mexique, Thevet.
- Jucutácato**, s. Lienzo de Jucutácato.
- juego de pelota**, Ballspiel (*tlachtli*). I 193.
- Jugend**, s. Fest der männlichen, der weiblichen —.
- Julianischer Kalender**. I 313.
- junge Götter**, in Assoziation mit den alten Göttern. I 82 — s. *Xochipilli*, *Xochiquetzal*. — s. *Uitzilopochtli*. — *Tezcatlipoca*, *Uitzilopochtli*. I 245, 152, 206 — s. *coneuatl*, *pilnechiualli*.
- junge Liebesgöttin**, *Xochiquetzal*, Mondgöttin. II 32, 66, 79, 84 — s. blaue Mondgöttin.
- junge Menschen**, eben erschaffene, von *Xolotl* mit eingeweichtem Brote genährt. II 97.
- junge Mondgöttin**, s. *Xochiquetzal*. — s. Aphrodite.
- junge Sonne**, ihr Aufgang im Osten (*Tlilan-Tlapallan*, *Tlatlagan*) Kern des Naturmythus der *Nauauatzin*-Legende. II 53 — am Himmel aufgehende = *Tezcatlipoca-Telpochtli*. I 206 — *Uitzilopochtli*. I 264 — s. *pilnechiualli*. — *Xochipilli*. II 175, 176.
- junger Gott**, ihm wird von dem Dämon des Westens, dem *acipactli*, ein Fuss abgerissen. II 63, 64 — s. *Telpochtli-Tezcatlipoca*.
- junger Krieger**, junger Mond, *Tezcatlipoca* (s. *telpochtli*) und *Xipe Totec*. II 57 — s. *occlotl-quauhtli*. — die im Osten aufgehende Sonne. II 86.
- junger Maisgott**, auf den Hüften der Maisgöttin und Wassergöttin hockend, im Westen der Unterwelt. II 57.

junger Maiskolben, in Blütenform endend. II 43.
junger Mond. II 31, 57, 63 — ist der junge Krieger (*Tezcatlipoca*, *Xipe Totec*). II 57, 66, 253 — am Abendhimmel sichtbar werdend, fehlt ihm der hintere Theil seiner Scheibe, d. h. sein Fuss. II 63 — am Abendhimmel erscheinend *Tezcatlipoca*. II 32, 33, 63.
junger Sonnengott, *Uitzilopochtli*; seine Feinde die Mondgöttin *Coyolrauh* und die Sterne (*Centzon itznahua*). II 11 — *Nanauatzin*; Sonne, die durch Selbstverbrennung sich von ihren Schwären befreit hat. II 55.
Junggesellenhaus, s. *telpochcalli*.
Jüngling, s. *telpochtli*.
Jünglinge und Jungfrauen, im Anfangszeichen der fünften Venusperiode (*olin*) von *Tlanizcalpantecutli* geschossen (Süden). II 148, 157 — s. *quauhyotl*.
Junta Colombina. I 342.
Juweliere, s. *tlatequê*.
Kahlköpfiger Gott, s. alter kahlköpfiger Gott.
Kahlköpfiger Vogel, der Geier (*cozcaquauhtli*). I 307; II 253.
Kahlköpfigkeit, des Geyers. I 13 (Symbol des Alters), 44, 180, 185, 307; II 253.
Kak u pacat, „Feuer ist sein Blick“, Name des Kriegsgottes der Maya von Yucatan. I 282.
Kakao, s. Schale mit überschäumender brauner Masse (II 171, 182 etc.). II 220 — vom wandernden Kaufmanne aus der südlichen pazifischen *Tierra caliente* heimgebracht. I 293 — Haupthandelsobjekt. I 222 — Geldsurrogat. I 332.
Kakaofrucht. II 107.
Kakaogefäß, s. Gefäß mit zwei rechteckigen Streifen.
Kakaohändler, ihr Gott *Ekchuah* (Maya). I 334.
Kakaopflanzer, Gott der, *Ekchuah*. I 321, 334 — der schwarze Gott der Maya, in Skorpiongestalt auftretend (s. *ekchuh*). I 321.
Kakaoschote, nach Art einer reifen — gefleckter Hund, beim fünfzehnten Uinal *Moan* von der Maya geopfert. II 194 — die siebente der dreizehn Stunden des Tages, ist zum Range der dreizehnten Stelle erhoben worden. II 295.
- Mitte**, fünfte Weltgegend (s. auch dort). I 237; II 4, 15 — durch *Mictlantecutli* bezeichnet (im Codex Borgia). I 238, 244, 250 — durch den Pulquegott. I 251 — durch *Mictēcaciuatl*. I 277 — durch eine Erd- oder Todesgöttin auf dem schwarzen Loche der Erde. II 3 — durch *Tezcatlipoca ixquimilli* repräsentirt. I 269 — durch die fünfte Venusperiode und den Anfangstag *matlactli olin*. I 329, 333, 335 — durch eine alte Gottheit mit der Hieroglyphe *tum* im Kopffutze, in der Dresdener Maya-Handschrift, bezeichnet. I 341 — fünfte Weltgegend, durch den Feuergott repräsentirt. I 73, 117, 237; II 165 — siebente Weltgegend, durch *Izac Mixcouatl*, *Hancueyē* repräsentirt. — s. Bewegung von oben nach unten. — durch die schwarze, die fünfte der fünf *Cuateteō* repräsentirt. II 91 — als das „Unten“ gedacht. I 269, 277 — s. *tloquē nauaquē*. I 79 — dritte Weltgegend, dritte Richtung. I 337, 339, 341 — ihre entsprechende Farbe, schwarz. II 3, 10.
- Mitte der Unterwelt**, Reich des Feuers. II 72–75.
- Mitte der Welt**, Mitte des Hauses. I 117 — Feuerplatz. I 67 — die dreizehnte Nachtstunde. II 205.
- Mitte des Hauses**, das Heerdfeuer. I 115; II 74.
- Mittellinie**, muss beim Ballspiele vom Balle passiert werden. I 289.
- Mitternacht**, s. *youalnepantla*. — Zeit von Mitternacht zu Mitternacht = astronomischer Tag; seine Herren die dreizehn Vögel und ihre Götter. II 298, 299.
- Mitternacht** und untere Region, durch die hirschköpfige *Xochiquetzal* und den Priester *Tlattecutli*'s bezeichnet. II 193–194.
- mittlere Länge** der synodischen Umlaufszeit des Planeten Venus 583 Tage 22^h 6' 40", von den mittelamerikanischen Priestern zu 584 Tagen angenommen. II 137.
- mitzontli, tlacochtzontli**, Speerperrücke des Feuergottes. I 119, 120.
- Mixcoamaçatzin**, „Wolkenschlangenhirsch“, Name des sagenhaften ersten Toltekenkönigs, der die Herrschaft in *Tollan* begründete. II 165.
- Mixcoatepetl Colhuacan**, auf dem Berge *Mirconatl*'s in *Colhuacan*, wird das Feuer neu erbohrt. I 139; II 119.
- Mixcouatl** „Wolkenschlange“, Gott der Chichimeken und der Jagd. I 183, 209 — Aussehen und Tracht. I 259–266 — Gesichtsbemalung des Morgensterns. I 254, 259 — trägt Hirsch als Rückendevise. I 107 — seinen Opfern am *Quecholli*-Feste werden die Glieder wie bei einem erlegten Wilde zusammengebunden. I 263 — Feuerquirl. I 43, 107 (in Hirschverkleidung); II 68, 118 — einer der *Tzitzimimē*. I 186 — die zweite der vier Formen der Gottheit des Planeten Venus, den Norden bezeichnend, in der Abendsternreihe. I 339 — entsprechende Maya-Gottheit. I 341 — Hüter der vierten Venusperiode, den Norden bezeichnend. I 327, 332 — ihm entspricht der Kriegsgott in der Dresdener Maya-Handschrift. I 335 — der fünfte der fünf Hüter der zweiten Venusperiode, den Norden bezeichnend. I 259–266 — in seiner Tracht der vom Speere des Planeten Venus getroffene Jaguar (*ocelotl*). II 149 — am Baume des Nordens. II 104 — bei der *Tlaçolteotl* des Nordens. II 80 — Glieder weiss mit gelbem oder rothem Streifen. I 43, 181 (s. *Itzpapalotl*), 259 — Prototyp des Opfermenschen. I 179, 264, 265, 286, 289, 296; II 68 — auf dem Ballspielplatze der beiden *Tezcatlipoca*, als Opfermensch. I 289 — seine Verwandtschaft mit *Tlauizcalpantecutli* beruht darauf, dass beide „schiessende Götter“ sind und Beziehung zu Krieg und Menschenopfer haben. I 263, 264 — zusammen mit *Itzpapalotl* genannt. I 183 — Gegenstück der *Itzpapalotl*. I 259 — wird mit *Camaxtli* identifiziert. I 260, 264 — erscheint in huastekischer Tracht. I 266 — erscheint (wie die Urgötter) in Hirschgestalt (s. *maçatl*). I 107; II 164 — sein Fest das vierzehnte Jahresfest *Quecholli*. I 260, 261 — sein Tempel in México, ein Miniaturabbild der Buschsteppe, heisst *Teotlalpan*. I 260 — eigentlich ein Stern Gott. I 261, 262 — daher Repräsentant des Nordens. I 262 — einer der Häupter der *Tzitzimimē*. I 262 — sein Determinativ ein becherartiges weisses Gefäss mit weisser Flüssigkeit, einem Obsidianmesser und einem Pfeilschafte. I 338 — den Jaguar (*ocelotl*) angreifend; ist seinem Wesen nach dem Jaguar verwandt. II 62, 68 — erscheint nackt und zweifarbig (weiss). II 62 — ihm entspricht in Maya-Handschriften *Ah bolon tz'acab*. I 318.
- Mixcouatl xonequiti** = *Mixcouatl xonecuilli*. I 261 — s. *xonecuilli*.
- mixcittalhuitcac**, Sterngeichts bemalung des Morgensterns. I 143, 254; II 238 — bei *Mixcouatl*. I 254, 259, 265, 266, 338; II 238 — bei *Painal* und *Uitzilopochtli*. I 254; II 238 — bei *Atlauā*. II 238 — = *tlayoalli* „Finsterniss“. II 238 — s. *cicittallō*, — s. *mixcittalichichihuh*.
- mixcittalichichihuh**, s. *ixcittalichihuali*. II 238.

mixchiauiticac, weiss und punktiert gezeichnetes Pflästerchen bei *Tlaloc*. I 111; II 268 — bei *Xolotl*. II 268.

mixchictlapanticac, zweifarbige, schwarze und rothe Gesichtsbemalung der Pulquegötter. I 141, 142.

mixnextlacuilolli, Baumwollstoffe mit eingewebten Mustern von Wolkenbildern aus huastekischem und totonakischem Gebiete. I 164.

mixoyotl, Zinne; Abbild der Wolke. — s. *mixxotl*.

Mixteca, Berg in der —, s. *Apoala*. — an der Grenze der, *Mixteca* liegt *Teotitlan*. I 177.

Mixteca, in der Bezeichnung Sahagun's = *Olmeca*. I 161 — verehrt besonders die *Tlaçolteotl*. I 161.

mixtekische Sage, von einem Hirschgott und einer Hirschgöttin. II 164.

mixteguacuilli, Abbilder der Wolken = Zinnen. I 119 — s. *mixxotl*.

mixtetlilcomolo, schwarze Grube um die Augen (s. *totocostli*); Gesichtsbemalung des Morgensterns. I 62, 254; II 67, 297 — *Mixcouatl*'s. I 259, 264, 266, 338.

mixxotl, Zinne; Abbild der Wolke. I 110, 119, 219 — s. *mixteguacuilli*. — Umrandung des Daches des Osttempels (Codex Bologna). II 108 — am Dache des Tempels des kopulirenden Westpaares. II 120.

mixxotl und *Edelsteinscheiben*, auf dem Dachfirste des Tempels des Westens im Codex Fejérváry. II 114.

miyotl, „der Jemandem eigentümlich zukommende Pfeil“, technische Bezeichnung für Strahl der Sonne, des Feuers u. s. w. I 119.

miyotia „mit dem Pfeile (Strahle) treffen“. I 329; II 148 — s. *miotli* — mit Strahlen treffen, vom Morgensterne gesagt. I 329.

mizcitalichihuh, Sterngesichtsbeimlung des Morgensterns. s. *mizcitalhuicac*.

Mizquic, Stadt; ihr Gott *Quetzalcouatl*. I 83.

Moan (Maya), Name des fünfzehnten Uinal. I 313 — Fest der Kakaopflanzer für *Ekchuah*, *Chac* und *Hobnül*. I 321 — seine Hieroglyphe. I 313.

moan, Schopfadler, Spitzäetus tyrannus. I 313.

moan-kin (Maya), „trüber, regnerischer Tag“. I 313 — s. *muyul*.

Moan-Vogel (Maya), Wolkendämon. I 313 — hat in seiner Haupthieroglyphe die dreizehn Himmel (*oxlahun taz muyal*). I 215, 313 — ist *Quetzalcouatl* verwandt. I 215 — ihm entspricht das Sinnbild des *Tamoanchan*. I 313.

moçauani, Fastender, beim Sonnengotte dargestellt. I 204; II 280.

moçacaicalia, Kampflauf beim *Ochpaniztli*-Feste. I 158.

mocueyecoaya, „sie lässt sich von den Huasteken begatten“, Phase im *Ochpaniztli*-Feste der Erdgöttin *Tlaçolteotl* nach Sonnenuntergang. I 158.

mociuaquetzqué, im Kindbette gestorbene Frauen. I 274; II 86, 87, 88 ff., 239 — s. *Cuateteó*. — s. *iaomicque cioa*. — Verkörperungen des Mondes. II 87.

mociuaquetzqui, „der als Frau Auftretende“, „der Krieger“, die im Kindbette gestorbene Frau. I 156, 185, 298; II 49, 218 — s. *Itzpapalotl*, *Cuatlampa*. — lähmt den Fuss der Feinde der Krieger. II 90 — ihre Finger oder ihr Haar von den Kriegen begehrt, um es in ihren Schild einzusetzen. II 89. — ihr Unterarm gilt als mächtiger — Zauber. I 298 — hat der *Chalchiuhtotoltemoc* im Schnabel. I 297, 298 — s. *ic micuj ijtí*. — s. Leichenreden.

mocxipacayo yn omitotique teteu, „Fusswaschen der Götter, die getanzt haben“, Zärimonie des *Tititl*-Festes. I 189

modernder Xolotl. II 41, 43.

momoztli, Erdpyramide; Kultusstätte *Tezcatlipoca*'s, auf Wegen und Kreuzwegen (*ótlanaxac*). I 148, 222.

Monate zwölf, im sechsten Tonalamatl-Abschnitte dargestellt zwischen Mond- und Sonnengott. II 228.

Monatsdaten der Dresdener Maya-Handschrift. I 350.

Mond, sein Gang am Himmel und seine Phasen beeinflussten die Vorstellungswelt des primitiven Menschen nach zwei Hauptrichtungen: als den Wechselnden (Prototyp des Wachstums) und als den Nächtigen. II 86 — zwei Hauptreihen von Gottheiten entwickelnd: solche des Wachstums, der Erneuerung (Pulquegötter, *Xipe Totec*, *Teteo imnan*, *Quetzalcouatl*, *Xochiquetzal*), solche der Nacht, des Dunkels (*Tezcatlipoca*). II 86 — Widerpart der Sonne, sehr primitive Auffassung. II 86 — verkörpert in der *Ciuacouatl* (*Quilaztli*), in den *Cuateteó*. II 86 — im Gegensatz zur Sonne weiblich gedacht, ist die von der Sonne zerschnittene, getötete *Ciuacouatl*, die am Westhimmel wieder erscheint. Ihr Gefolge bilden die *mociuaquetzque*. II 86, 87 — von einem Kaninchen getragen. I 107; II 20, 164, 309 — Kaninchen = Mann im Monde. I 140; II 10 — s. *metztli*; s. *tochtli*. — s. *ce miquiztli*. — s. Strahlenscheibe. — hat Beziehung zu den Weibern, zur Generation. I 94, 105; II 11, 64, 90 — zu den Pulquegöttern. I 140; II 10, 214 — Sonne der Nacht, tote Sonne. I 102, 151 — seine Kennzeichen sind die rothe Farbe, die Schneckengehäuse, die rothe und weisse Farbe. II 66 — *tochtli* bzw. *cuetzpallin*, im Rachen der Himmelschlange, vom Adler gepackt. II 64, 65 — Seine Personifikationen die Pulquegötter (s. Mondwesen). II 172 — ein Sohn *Tlaloc*'s verwandelt sich in den Mond. I 104 — erster Mensch. II 13, 74 — Repräsentant der Vorfahren, als solcher in Beziehung zum Feuergotte. II 74 — seine Region der Norden (s. Land der Vorfahren). II 116 — er ist der ewig Veränderliche. I 151; II 1, 11, 24, 31, 86, 246, 253 ff. — verkörpert Leben und Tod, ist der Zeitmesser (mensis). II 169 — verliert und gewinnt im Ballspiele. II 31 — sein Zunehmen Vorbild für das Wachsen, sein Absterben und Wiedererscheinen Vorbild des Absterbens und Wiedererwachsens der Vegetation. II 11, 86, 184, 253 — s. Wechsel. — s. geköpfte Göttin. — Wachen und Schlafen des Mondes (s. *ixtoqoliztli*, *cochiliztli*) = dreizehn Tage, wo der Mond am Abend- bzw. Morgenhimmel sichtbar ist. Bedeutung der fünfundzwanzig Götterpaare. II 207–208 — seine Konjunktion. II 208, 213 — seine siderische Umlaufzeit 27 $\frac{1}{3}$ Tage, synodische 29 $\frac{1}{2}$ Tage. II 208 — s. Monate. — seine Umlaufzeit schematisch = 26 Tage. II 208 — sein schrittweises Heranrücken an die Sonne. II 13 — Zeit seiner Annäherung an die Sonne der Süden. II 58 — von der Sonne besiegt Krieger. II 215 — bei der Annäherung an die Sonne halbt = geköpfter Sünder. II 285 — vom Sonnengotte geköpft. II 291 — s. Kampf der Sonne mit dem Monde. II 285, 286 — seine Zerstücklung Motiv der *Uitzilopochtli*-Sage. II 1, 10–11, 86, 290, 291 — auf dem dunkeln nächtigen Himmel bei *Mictlantecutli*. I 297 — sein Abbild ist der Nasenhalbmund in dunklen Felde, Symbol der *Tlaçolteotl*. I 275; II 10 — Beziehungen zu Liebe und Zeugung (*Tlaçolteotl*). II 11, 55 — ist die geköpfte Göttin. II 11, 63, 184, 283, 290, 291 — dieser ist Sinnbild der fruchtbaren Erde. II 184 — ist *Coyolrauh* des *Uitzilopochtli*-Mythus. II 11, 86, 290, 291 — sein Gefolge die *Centzon Uitznaua*. II 13 — seine Phasenbildung durch das rothe, gelbgefleckte Skelet (s. dort) angedeutet. II 309 — bleibt nur einen Tag wirklich verborgen. II 2 — stirbt nur einmal (am Morgenhimmel stehend). II 13 — sein bleicher Spiegel ein Wasserbehälter. II 260 — nachdem er ganz zerstückt, verbrennt er sich im Osten in der Sonne, um darnach (am Abendhimmel) als neuer Mond zu erscheinen. II 55 — *Quetzalcouatl* von *Tollan* ist eine mythische Ausgestaltung dieser Naturanschauung. II 55, 67, 110, 169, 213, 214.

260, 262, 291, 298 — ist eigentlich der nach Osten wandernde und sich daselbst verbrennende *Quetzalcouatl*. II 67, 78, 86, 110, 169 — sterbender; sein Zusammenreffen mit dem Erscheinen des Morgensterns am Himmel. II 2, 298 — hat als sterbender (abnehmender) Verbindung mit dem Tode. II 12 — sterbender, s. abnehmender Mond. — zunehmender, am Abendhimmel = *Tezcatlipoca*. II 12, 23, 32, 33, 35, 63, 298 — s. *Telpochtli*. — Urverwandtschaft zwischen ihm und *Tezcatlipoca* lässt letzteren in der Reihe der Feuergötter erscheinen. II 74 — junger, junger Krieger, *Tezcatlipoca* (s. *telpochtli*) und *Xipe Totec*. II 57, 66 — junger, zunehmender, s. junge Liebesgöttin, *Xochiquetzal*. II 32, 66 — bezeichnet durch gelbe Skeletköpfe in der Hand von Dämonen. II 11—12 — sein Zeichen *tlapoyana* (s. dort). II 235, 246 — in der Dunkelheit leuchtend = alles sehend. II 11 — „Auge der Nacht“. II 86 — *Yonaltecutili* (?). II 28 — vom Sonnengott getötet; in der zweiten Hälfte des Monats halbt, geköpft. II 11 — mit ihm geht der sakrale Turnus der Himmelsrichtungen vom Westen über Süden nach Osten. II 22 — ihm wird der Kopf vom Dämon des Ostens (*Tlaczinacantli*) abgerissen, der Fuss vom Dämon des Westens (*acipactli*). II 63 — sein blasses Licht hat Beziehung zum Wasser, zum *cuetzpalin*. II 64 — zur *Chalchiuhtlicue*. II 225 — in esoterischer Auffassung Federschlange mit *tochtli* oder *cuetzpalin* im Rachen. II 259 — die himmlische Federschlange. II 259 — bezeichnet die Zeit der Finsternis und Nacht. II 69, 86 — neu gewordener und seine Göttin (*Xochiquetzal*) schildern und erklären die Erneuerung *Quetzalcouatl*'s, des Morgensterns. II 67 — auf seine Herrschaft bezieht sich *Colhuacan* (oder *Tollan*). II 31 — durch eine Ohreule und eine sternbesetzte Nachtwolke, repräsentirt in der Cella des Tempels des Nordens, im Codex Bologna. II 110 — durch das Thier mit der spitzen Schnauze (?) repräsentirt. II 111 — Tötung und Zerstücklung des Mondes durch die Sonne. II 145 — sein Sohn der Morgenstern, der von der *Teteoinman* am *Ochpaniztli* im *Pochtlan* gesucht wird. II 145 — sein Antlitz (*u uich v*, Maya) fällt auf sein Gesicht, beim Weltuntergange. II 156 — sein Glanz verdunkelt durch Schlagen mit einem Kaninchen in sein Gesicht. II 228 — = halbe Sonnenscheibe, bei der *Tlaçolteotl*, dem zweiten der sechs Himmelswanderer. II 159, 160, 161 — am Rande beim sechsten der sechs Götterpaare. II 177 — Datum *ce itzcuintli* „eins Hund“, bei *Xipe*. II 257 — aus dem Meere emporsteigend, *quetzalcoatl* bei *Xipe*. II 258 — als Tänzer (oder Sterne vor dem Monde tanzend), der tanzende dunkle himmlische Feuergott, bei der *Xochiquetzal*, II 282 — Tempel des Mondes (*Tillan*), bei der *Itzpapalotl*. II 263.

Mond des Abendhimmels, Mond mit aschgrauer Scheibe und schmaler glänzender Sichel, beim Westen der Untervelt dargestellt. II 56, 57 — s. *Tezcatlipoca*.

Mond im Rachen der Schlange, Determinativ bei *Xipe Totec* und sonst. II 64, 65, 259 — s. *tochtli*.

Mondfinsternis. II 259.

Mondgott, besondere Formen: — *Quetzalcouatl*, *Tlaçolteotl*, *Tepeyollotli*. II 219 — s. *Tecciztecatl*; s. oben kahlköpfiger Gott, Gott mit dem *tun*-Zeichen. — Wasserträger. I 104 — ein Zeugungsgott. I 105 — als solcher erscheint *Xochipilli*. I 246, 247; II 64 — erscheint vielfach als Gott der Musik. I 315, 316; II 100, 102, 189 — in der Dresdener Maya-Handschrift in obscönen Stellungen dargestellt. I 215, 216 — im Codex Perez als Herr des *Katun uuc ahau* = mex. *Chicome xochitl* „sieben Blume“. I 314 — herrscht über die Weiber. I 316; II 90, 100 — s. Mond. — s. Menstruation. — trägt seinen abgeschnittenen Skeletkopf in der Hand. II 12 — als Herr des Wachs-

thums wird er zum agrarischen Gott (s. *Xipe Totec*). II 64, 290 — *Xipe*, Anspielungen auf seine Mondnatur s. unter *Xipe*. — ist überall zum Erdgott geworden, II 33 — als solcher ist er *Xipe Totec*. II 18, 57, 64, 66, 253 ff., 259 ff., 290 — s. *tochtli* im Rachen der Federschlange, Determinativ *Xipe*'s. — s. *Telpochtli*. — Herr der Geburt, der Lebensmittel, *Tonacatecutli*. II 28, 30, 100 — Beziehungen zwischen ihm, dem ersten Menschen, dem Repräsentanten der Vorfahren und dem Feuergott. II 74 — springt *Nanauatl* nach ins Feuer und wird zum Monde. Sein Name *Nauí tecpatl*. II 79 — trägt Blumenkranz. I 105; II 79, 119, 176 — halb blauer *Auiateotl*, halb Pulquegott; in Kopulation mit der Mondgöttin (*Tlaçolteotl*). II 120 — s. Nordpaar. — *motemmacpalhuiticac*. II 110 — vor dem Tempel des Nordens, setzt sich aus vier Elementen (*Tezcatlipoca-Auiateotl*, Pulquegöttern (*Tlaçolteotl*) *Quetzalcouatl*, *Itztlacolinhuqui*) zusammen. II 110 — blauer, der erste der sechs Himmelswanderer. II 158 — bezeichnet die fünfte Nachtstunde. II 189 — s. *Tezcatlipoca*. — seine Symbole, Speerbündel und Steinmesser. II 228 — das Steinmesser (s. *nauí tecpatl*). II 228 — ihm geweihte Tage, *nauí atl* „vier Wasser“. I 104; II 229 — *chicuei ocomatl* „acht Affe“. II 229 — sein Name *nauí tecpatl* „vier Feuersteinmesser“. II 79.

Mondgott *Tezcatlipoca*, seine Verkleidung das Thier mit der spitzen Schnauze. II 282, 283.

Mondgötter, die Pulquegötter. II 10, 24, 110, 172—173, 177, 214 — *Xipe Totec* und *Quetzalcouatl*. II 262 — *Tlaçolteotl* und *Xipe*, ihr Abbild die Wachtel (*colin*). II 290, 291, 296.

Mondgott und Mondgöttin, kopulirendes Paar des Nordens. II 130.

Mondgöttin, ursprünglich die *Tlaçolteotl*, die später zu einer Göttin der Ernte, der Feldfrüchte, des Ackerbaues wurde. II 10, 11, 21, 45, 48, 52, 54, 55, 63, 64, 78 ff., 86, 120, 158 bis 161, 192, 216, 219, 225, 248, 252, 294, 301, 306 — Göttin des vollen Mondes. II 18 — ihr Abbild der Nasenhalbmund (*yacametzli*). II 51, 64 — (*Tlaçolteotl*), der zweite der sechs Himmelswanderer. II 158—161 — ihr Gegenstück ist der Erd- und Frühlingsgott *Xipe Totec* (s. dort). II 253 — alte, s. Göttin auf der rothen Scheibe. — s. geköpfte Göttin. — Patronin des Schwitzbades. II 13 — erste, vorbildlich Gestorbene. II 13 — ihr Tod im Neumonde. II 13 — Verkörperung des Tageszeichens *miquiztli*. II 12, 86 — Göttin des Krieges. II 206 — schöne, die junge Göttin der Liebe, *Xochiquetzal*. II 32, 66, 79, 84, 175, 176, 207 — ihr Determinativ (im *Tonalamatl*) der Ballspielplatz (*tlachtli*). II 32. — Parallelen, Homologa, Gegenstücke, drei Schlangen mit dem Gesichte eines Gottes im Rachen, *Mircouatl*, *Xochipilli*, Kaninchen (*tochtli*) dem Rachen der Schlange entsteigend. II 68. — die Herrin der Kühle, *Chalchiuhtlicue*. II 225 — als solche *Itzpapalotl* durch *tecciztli* vor dem Gesichte gekennzeichnet. II 262 — ihre Erscheinungsform, das rothe, gelbgefleckte Skelet (Blutschlange). II 308 — s. *Chicuei acatl*.

Mondgöttinnen tragen das *citlalcuētl*. II 46 — fünf, fünf Formen der *Tlaçolteotl*. II 77—85.

Mondhieroglyphe, ihre Elemente. II 285 — s. Halbring. — s. *metztli*, Hieroglyphe. — auf dem Baume des Nordens (*tzompantli*). II 115.

Mondköpfe, abgeschnittene, in der Hand *Tezcatlipoca*'s. II 12.

Mondmythen, Sage von *Quetzalcouatl*. II 1, 2 — Sage von *Uitzilopochtli*. II 1, 10—11, 13.

Mondphasen, s. Phasen.

Mondscheibe, ihr hinterer Theil fehlt dem neu am Himmel erscheinenden Monde. Daher *Tezcatlipoca* nur mit einem Beine dargestellt. II 12, 32 — vordere, bei der Annäherung des Mondes an die Sonne abgeschnitten (geköpfter Mond). II 11, 12 — halb dunkel, halb leuchtend; dieses deutet das *chictlapanqui* der Pulquegötter an.

- II 24 — s. Farbengegensatz. — grosse rothe Scheibe, den Körper *Tonacatecutli's* bildend. II 30.
- Mondsichel**, ausgehöhlter Leib der geköpften Mondgöttin. II 11 — des Mondes des Abendhimmels. II 56, 57 — Hut *Itztlacoliuhqui's*. II 110.
- Mondtempel**, Tempel des Nordens (über dem Nordbaume). II 110.
- Mond und Abendstern**, am nächtlichen Himmel wandelnd. II 32 — *Tezcatlipoca* und schwarzer *Quetzalcouatl*. II 32.
- Mond und Morgenstern**. II 2, 4, 33, 213 — gehen zusammen, sind mythologisch einer aus dem anderen entstanden. II 67, 68 — s. Verwandlung des Mondes in den Morgenstern.
- Mond und Sonne**, schwarzer und rother *Quetzalcouatl* bzw. *Quetzalcouatl* und *Macuilxochitl*, auf einer rothen Scheibe von zwölf *Cuateteó* umtanzt. II 46 — als Eltern der neugeborenen Sonne vorgeführt. II 48 — gegensätzliche Stellung beider. II 90 — Konjunktion des Mondes. II 208 — fallen zusammen am Weltende. II 265.
- Mond und Sterne**, ihre Repräsentanten, s. *Tlilan Tlapallan*, — in Beziehung zu ihnen der Feuergott (s. erster Mensch). II 288.
- Mondwesen**, sind die *centzon totochtin*. II 10 — die *Tezcatlipoca* verwandelt *Auiateotl*. II 100, 102. — ihr Abzeichen ist das *yacameztli*. II 254.
- monotheistische Ahnung**, in der Person des Gottes *Quetzalcouatl*. II 75.
- monströses Wachsthum**, bei *Xolotl* angedeutet. II 42, 43 — s. Baumstamm.
- Moqui**, s. *Hopi*.
- Morgendämmerung**, um diese Zeit singt der *quetzalcoxcortli*. I 148 — der *coxcortli*. II 109, 176, 296, 297.
- Morgenhimmel**, Region der *tonatihu ilhuicac yaqué*. I 263 — *Tlauizcalpantecutli's*, I 263; II 78 — sein Symbol Feuerstein-Pfeilspitzen. II 78.
- Morgenröthe**, s. *tlauizcalli*. — die dritte Morgenstunde. II 296 — hat der Morgenstern hinter sich, angedeutet durch blutscheissenden *Quetzalcouatl(?)*. II 72.
- Morgensonne**. II 265, 268.
- Morgenstern**, vor der Sonne aufgehend, mythische Entstehung aus dem in den Strahlen der Sonne verschwindenden Monde. II 33 — Periode seiner Sichtbarkeit. I 350 — bei den *Huichol*. — = *Quetzalcouatl*. I 85, 238, 302; II 1, 238 — s. *ce acatl*. — ist *Ce acatl Topiltzin Quetzalcouatl*. II 238, 291 — Tag seiner Vereinigung mit der Sonne 4 *caban* (Maya) = mex. *nani olin*. I 351 — verschwindet in den Strahlen der Sonne. II 2 — durch Leichenköpfe mit Stirnlocken in der Hand von Dämonen bezeichnet. II 11—12 — seine Perioden auf die Konstruktion des Tonalamatl's von Einfluss. I 85 — einer der sechs Himmelswanderer. I 302 — sein Mythos in Parallelität mit dem Mondmythos (*Quetzalcouatl's*) gesetzt. II 1, 2, 67, 68 — bewegt sich der Sonne entgegen. II 1, 2 — erscheint am Osthimmel in Adlermaske. II 12 — sein Aufgehen in der zweiten Morgenstunde. II 295 — s. *Tlauizcalpantecutli*. — s. neun Köpfe. — er ist der *iaqui telpochiaqui* „der Krieger, der voran geht“. II 70 — Repräsentant der Krieger und des Kriegertodes. II 238, 239 — heisst bei den *Michuauqué* (Tarasca): *Urendequa recara* „der voran geht“, *hozqua quhuangari* „der Stern, der Krieger“. II 70 — ist der „Werfer“, „Schütze“, als solcher auch der Blutrührsender(?) II 72 — s. schießende Götter. — als schießender Gott, wird er der Schütze, der Jäger, zum *Mircouatl*. II 146 — s. *Tabatzi Tamats*. — schießt einen Pfeil auf den Hirsch ins Dickicht, bei den *Cora*. II 309, 310 — Sohn des Mondes (s. dort). II 145, 248 — Datum *yei quauhtli* „drei Adler“, bei *Xipe*. II 257.
- Morgen- und Abendröthe**. II 24.
- Morgen- und Abendsonne**, in Annäherung an beide „stirbt“ der Planet zweimal. II 13.
- Morgen- und Abendstern**, ihre Tötung und Zerstückung durch die Sonne. I 233, 241, 257, 332, 337, 350; II 145 — durch Figuren als Träger abgeschnittener Leichenköpfe in Adler- und Steinmesserverkleidung veranschaulicht. II 13 — s. Dualität, s. rother, schwarzer Adler.
- Morgen- und Abendstunden**, Parallelität beider Reihen. II 295.
- Mosaik**, s. Türkismosaik. — s. blaues Mosaik. — s. Federmosaik. — Halskette aus verschiedenfarbigem Federmosaik. II 256.
- Motecuñoma** sendet an Cortés die Kostüme der vier Götter. I 85, 86, 88; II 75 — seine Palastsklaven (*xolomé*). I 193 — seine Gesandten durch Stab und Fächer ausgezeichnet. II 162 — trug sich nach der Ankunft der Spanier mit Selbstmordgedanken. II 56.

Schambinde, s. *maxtlatl*. — s. *Ciuateteó*. — s. *mecamaxtlatl*.

Schärfe der Schneide des Feuersteinmessers durch Zähne ausgedrückt. I 16 — Ideenassoziation mit dem Auge. I 283 — Region der — = Norden. I 268.

Schatz des *Uotan*, in *Huehuetan* 1691 verbrannt. II 235.

Schatzkiste, mit einem Menschen in der Oeffnung (mit

einem Grasbusche und *uitzli ezó*), bei der *Chantico*. II 280 — Brustschmuck *Tonacatecutli*'s. II 211, 212 — hat Bezug auf den Feuergott. I 64 — bei dem Determinativ der *Tlaçolteotl* des Südens. II 82, 83, 84 — umgestürzte, mit herausfallenden Edelsteinschnüren beim Ost-Ballspieler. II 116 — beim West-Ballspieler. II 116. — s. Topf. — mit Edelsteinzierrathen (Ketten, Schnüre, Gefäss) und mit Blumen zwischen *Tonacatecutli* und *Tonacaciuatl*, dem ersten der sechs Götterpaare. II 171 — im Wasserstrom bei der *Chalchiuhtlicue*. II 225.

Schaufel. II 244.

schäumende Flüssigkeit, s. Pulque, *octli*. — mit Blumen besteckt. — s. Blume. — s. Kakao. — braune —. II 40 — siedende Harzmasse. II 171, 175.

schäumende Oberfläche, s. weisser Schaum. — s. *aztatzontli*.

schäumendes Getränk, s. Pulque, Kakao.

Schaumkante, weisse, aus dem Munde des weissen Hirsches des Ostens athmend. I 300 — der (gezackten) Räuchergefässe (*tlecuilli*). I 301, 307, 339 — weisse, des tiefschwarzen *tlecuilli* bei der *Tlaçolteotl*. I 307.

Schaumlinie. I 285, 287.

Schaumzeichnung, am Rücken der doppelköpfigen Schlange bei *Tlaloc*. II 229.

Scheerenarme, bezeichnen den Skorpion als Fänger in Maya-Handschriften. I 321.

Scheibe, blaue, *anauatl*, Erdrund. II 107 — rothe, auf ihr *Teteoinnan* (Mondgöttin) liegend auf der Plattform des Tempels des Hauses der rothen Schlange. II 18, 28 — rothe, grosse, an Stelle von Brust und Leib bei *Tonacatecutli*, ist ein *quauhxicalli*. II 29, 30 — den Mond andeutend. II 30 — des Mondes und Planeten Venus; Phasen dieser Gestirne als Halbiren, Zerschneiden, Zerstückeln, Köpfen der Scheibe aufgefasst. II 11 — s. Phasen. — aschgraue, des Mondes des Abendhimmels. II 56 — s. *tlachieloni*-artige —.

Scheibe mit Edelsteinriemen, bezeichnet *Xochipilli* als den Herrn der Kostbarkeit, I 101 — charakteristisch für *Macuilxochitl* und dessen Entsprechung auf Maya-Monumenten. I 215.

Scheibe von Punkten umgeben, auf der Schambinde *Xochipilli*'s, ein Symbol des Himmels. I 248.

Scheibe, Trapez und Schlangenzunge, fünf derartige Gebilde bezeichnen im Codex Vaticanus die fünf aufeinanderfolgenden Venusperioden. II 138 — s. *yacaxiuhtl*.

Scheiben, rothe, auf schwarzem Grunde, bei *Tepeyollotli*. II 21 — durchbohrte, auf dem Lederriemen *Tlauizcalpantecutli*'s, des Regenten der ersten Venusperiode. II 140 — s. vier Scheiben. — s. weisse Scheiben. — s. gelbe Scheiben.

scheibenförmiges Schneckengehäuse, s. Schneckengehäuse.

Scheide von Tag und Nacht, durch ein halbes Sonnenbild und das Bild der Nacht dargestellt, beim Pulquegotte angegeben. I 251, 348; II 85, 173, 246 — bedeutet das Tageszeichen *olin* (roth und blau). I 266 — (roth und blau), bedeutet die Körperbemalung *Mixcouatl*'s. I 266 — beim Regengotte der fünften Himmelsrichtung. I 347, 348 — bezeichnet den Mond. II 173, 235, 246 — s. *tlapoyaua*. — s. Farbengegensatz.

Scheitelfederkamm, s. *quetzalcoxcotli*. — s. *coxcotli*-Helm- maske. — s. *quachichiquilli*. — s. *uitoncatl*. — meist in der Form von Quetzalfedern gezeichnet. I 304 — aus Edelsteinstreifen, bei *Macuilxochitl*. I 272, 304 — bei *Chalchiuhtlicue*. I 304.

Scheitelhaar, den Opfergefangenen um Mitternacht vor dem Herde abgeschnitten. I 115.

Scheitelkamm, aus *chalchiuhtl*-Streifen, beim Sonnengotte. I 284 — eingerollter, der Windgottschlangen. II 45 — der dunklen Bogenfigur, die das Loch im Vorhange der Erde verschliesst. II 45.

Scheitelrosette, aus ihr eine Schnur mit dicker Endquaste herabhängend, bei den fünf Formen der *Tlaçolteotl*. II 78.

Scheitelzopfentwicklung, Enden einer. I 98. 232.

Scheiterhaufen, auf ihm verbrennt *Quetzalcouatl*. I 85; II 6 — s. *Tlatlayan*.

Scheiterhaufenschmuck, Papierfähnchen (*amapamitl*). II 239.

Schelle, *coyolli*. II 277 — s. *Coyolxauhqui*.

Schellen, goldene an einem *cozcatl*, bei *Tlaçolteotl*. II 218.

Schellenring?, in der Hand *Tepeyollotl's*. I 233 — des Thieres mit der spitzen Schnauze.

schematische Aufzählung der Anfänge der 13×5 Venusperioden. II 137, 138 — nur knapp besonders im Codex Bologna angedeutet. II 138.

Schematismus, der mexikanischen Priestergelehrten. II 55, 67, 68, 208.

Schenkelhautbemalung, s. *teumechaue*.

Schenkelhautmaske, s. *mex(x)ayacatl*.

Schicksal nach den Kalenderbüchern bestimmt, von denen eines der Codex Borgia ist II 291, 292.

schliessend, schnelle Bewegung des Wassers durch einen Priester mit einem Speerbündel ausgedrückt, am Ende eines Wasserstromes bei der *Chalchiuhtlicue*. II 225.

schliessende Götter, s. *Tlauizcalpantecutli*, *Tonatiuh*, *Xiuhtecutli*. I 119, 263, 329; II 143–157 — *Mircouatl*. I 263.

Schiffe, Einwanderung der Mexikaner angeblich in solchen und Landung an der huastekischen Küste (*Panutla*). I 89.

Schild, s. *chimalli*. — s. Kriegswaffen. — s. *teueuelli*. — mit rothen Ringen s. *tlauhteuilacachiuhqui chimalli*. — blau. II 284 — mit rothem Keilausschnitt und rothen Tropfen. II 284 — *Xipe's*. II 259 — Schlagen an die Schilde (*chimaluictectivi*, *nino*, *ual*). II 308.

Schildkröte, s. *ayotl*, s. *aac*. — s. *Xochiquetzal* als Pulquegöttin. I 41 — die vier bei den Mandan-Indianern lassen regnen. I 202. — Sonnenthier. II 154 — Symbol der königlichen Gewalt (*tlatoeyotl*) bei der vierten Venusperiode, in der Dresdener Maya-Handschrift. II 154.

Schildkröten, s. neun —.

Schildkrötenmann, in der Dresdener Maya-Handschrift. I 316.

Schildkrötenschale, bildet den *tezcacuitlapilli* des *Xochiquetzal*. I 212; II 171 215, — auf dem Rücken des alten kahlköpfigen Gottes der Dresdener Handschrift. II 215, 313 am Speerbündel bei *Quetzalcouatl* II 215 — meist mit einem Sonnenbilde gezeichnet in Maya-Handschriften. I 313; II 154 — s. Dosenschildkröte. — vertreten durch Schneckengehäuse. I 313 — durch *eauac*. I 313 — vertreten durch das Element *tun*. I 313 — Musikinstrument. I 306; II 189 — s. *ayotl*.

Schildkrötenschalen-Zeichnung II 106, bei den vier Tempeln des Codex Bologna. II 109.

Schildkrötenschild, der *Xochiquetzal* setzt diese Göttin in Verbindung mit der *Chimalman*, „der liegende Schild, auf einem Schild liegend“, dem Namen der Mutter *Quetzalcouatl's*. II 171.

Schinden, des Opfers, am Feste *Xipe's*. I 170–173 (s. *tlacaxipeualiztli*), — der *Tlaçolteotl*. I 154, 157, 158 — der *Xochiquetzal*. I 211.

Schlaf = Tod des Pulquegottes. I. 138.

Schlafen s. *cochiliztli*.

Schläfenfleck, rother, Zeichen der Priester. I 28, 302, 305.

Schlag, durch einen menschlichen Arm veranschaulicht beim Feuergott. I 29.

schlagen, Tertium comparationis. Zwischen: Mais entkörnen (*uitlequi*) und blitzen (*tlauitequi*). II 42 — s. *Xolotl*, *Nanauatl*.

Schlagmarken des Feuersteinmessers. I 15.

Schlange, s. *couatl*. — Federschlange, s. *quetzalcouatl*. —

Feuerschlange, s. *xiuhcouatl*. — rothe oder Blutschlange, s. *tlapalcouatl*. — an den Kultusstätten des Regengottes. I 100; II 258 — Figur, unter dem Auge *Tlauizcalpantecutli's*. II, 140, 141 — Helmmaske der *Chalchiuhtlicue*. I, 100 — des zweiten der fünf Hüter der ersten Reihe der Venusperioden. I 243 — des Gottes *Nauí couatl*. I, 332 — bei der *Chantico* (unter dem Stuhl). II 277 — blaue, an Ober- und Unterlippe *Tlaloc's* gelegt (s. Lippenstreifen). II 36 — eine der vier Schlangen des rothen Wassergefäßes. II 43 — s. *olin*-artige Verschlingung (I 15), s. grüne Schlange, grüne, s. Ehebrecher (I 39): — gelbe = Feuer. I 47, 106; II 35 — schwarze, s. Haus der —. — mit nächtlichem Dunkel bemalt, über der Spitze des Tempels der Nacht. II, 28 — türkisartig gemalt, durchzieht quer das Skelettgefäß bei der Todesgöttin. I 149 — wandelt am Himmel, auf der Erde und in der Unterwelt. I 146 — junger, am Abendhimmel erscheinender Mond. II 32, 33, 63, 298 — bewohnt den zehnten der dreizehn Himmel. II 292, 294, 298 — bezeichnet die dritte Nachmittagsstunde. II 298 — s. *chiquítl*. — sein Hauptcharakteristikum ist der abgerissene Fuss und der an die Stelle tretende rauchende Spiegel. I 146, 220, 221, 282; II 63, 159 — auch sein zweiter Fuss fehlt und ist durch ein Steinnesser ersetzt. I 221 — vgl. den Namen eines der Genossen *Yacatecutli*'s: *Acromocuil*, „dem der Fuss weggenommen ist“. II 128 Anm. 2 — seinem abgerissenen Fuss vergleichbar ist der rothe Blutschlangenkopf an Stelle des linken Fusses der *Tlaçalteotl*, des zweiten der sechs Himmelswanderer. II 159 — ein Schlangenkopf ersetzt den Fuss des fünften der Himmelswanderer im Codex Fejerváry. II 163 — als rother (*tlatlauhqui*) und schwarzer (*yagauhqui*) erscheinend. I 148; II 23 — Aussehen und Tracht. I 146–152, 288 bis 294, 351 — Kostüm des Gottes. I 86 — trägt die Sternhimmelfederkrone. II 229 — Gott des *Torcatl*-Festes. I 21, 147, 150, 207, 290 — Menschenopfer an ihm. I 240 — einer der *Tzitzimimé*. I 186 — Feuerquirl. I 143, 146; II 118 — der Sehende, Allwissende. I 148, 151, 152, 221;

II 11, 81, 86 — s. *tlachicloni*. — Zauberer. I 146, 148 — liess sich an einem Spinnenfaden (als *Tzitzimtl*) herab. II 20 — der Krieger im Nordhause und der Krieger im Südhouse. I 149, 290; II 23 — s. *tlacocheacatl*, *uitznanuacatl*. — am Baume des Südens. II 101 — mit *Uitzilopochtli* die obere Region oder den Himmel bezeichnend. — seine Formen sind *Itziltlton* und der rothe *Nochipilli*. I 292 — mit der Erde identifiziert (s. *Tepeyollotli*). I 148 — ist der Unsichtbare, Schattenhafte, wie Nacht und Wind (s. *Yonalli cecatl*). I 148, 151; II 169 — s. *tloquē nauaquē*. — ist der Dunkle, Nächtige, die Verkleidung jeder Spukgestalt. I 146, 148, 151, 222; II 12, 81, 86, 149 — s. *ocelotl*. — ist der Jaguar. I 21, 146; II 149 — Gott des *ocelotl* *ocelotl*. I 21 — seine Region der Norden, das Reich des Dunkels, der Erde. I 21, 149; II 33, 49, 50, 155, 163 — als solcher erscheint *Mictlantecatl*. II 242 — seine Kultusstätten sind die Kreuzwege (*ōmacac*). I 222 — entführt die *Nochiquetzal*. I 209 — bezeichnet in der Reihe der dreizehn Herren der Stunden des Tages als der zehnte die Abendstunden. I 145; II 23 (zusammen mit *chiquātl*). — sein Abbild *Tepeyollotli*. I 146 — sein Abbild *Chalchiuhtotolin*. I 201; II 116, 272 — sein Abbild der Geier (?). — für *Nochiquetzal* eintretend. I 52 — mit einem Pfeile im Auge. I 61 — Regent des zweiten Tonalamatl-Viertels, der Region des Nordens. I 20–22 — = *Itzli*, zweiter der neun Herren der Stunden der Nacht, im Osten. I 220–212; II 163 — gegenüber *Itztlacoliuhqui*, dem Regenten des zwölften Tonalamatl-Abschnittes (*ecuetzpalin*). II 246–252 — mit verbundenen Augen (*irquimilli*), dritter der fünf Hüter der drei Venusperioden, die Mitte bezeichnend. I 269–270 — mit verbundenen Augen, Gott der strafenden Gerechtigkeit, Regent des dreizehnten Tageszeichens *acatl*. I 145–152; II 81, 246 — Kopf *Tezcatlipoca*'s unter dem Symbole der richterlichen Strafe. I 59 — mit dem herabkommenden Pfeile = (geopfter) Krieger. I 61 — vom Speere des Planeten Venus getroffen, in der zweiten Periode (Süden). II 148, 152, 154, 155, 157 — tötet *Ometochtli*. I 137, 138 — mit der Maske des Windgottes, Begleiter *Quetzalcoatl*'s in der Unterwelt. II 49 ff. — Geburtshelfer (bei der zehnten Tagstunde). II 201 — (s. *tlatlauhqui* —, gelber —), vierter und fünfter der sechs Himmelswanderer. II 162–164 — verwandt mit *Macuilrochitl*. I 20, 21, 146, 206 — durch den Krieger (*yaotl*) repräsentiert. I 21, 145, 147 — *Tezcatlipoca*-Kopf, Begleitbild im Tonalamatl, = Abbild des toten Kriegers. I 59 — richtet mit *Quetzalcoatl* den Himmel wieder auf. I 84, 104, 145, 150 — verwandelt sich in den Spiegelbaum *tezcaquauitl*. I 150 — Gott der Feste, Patron des *Cuicacalli*. I 146 — als Gemahl der *Nochiquetzal* gedacht. I 211 — mit *Quetzalcoatl* als Zeit- und Kalendergott im Zentrum des zweiundfünfzigjährigen Zyklus. I 147 — Erfinder und Vertreter des Schmuckes der Rede, des Gesanges, des Tanzes. I 283 — bedeutet „Gott“ (?), s. *Xipe tlatlauhqui Tezcatlipoca*. I 149 — s. *tloquē nauaquē*, *yonalli cecatl*. (II 169) — ist der souveräne Herr über Alle, s. *Moyocoyatzin*, *Tlilacahuan*. I 150, 151; II 86, 229 — unbeständiger Gott, seine Gaben gehen von einen auf den andern über. I 151; II 229 — Gebet an ihn. II 169 — sein Bild in *Tetzecoco* hatte vier Pfeile in der Hand als Zeichen der strafenden Gewalt des Gottes. I 151 — Gott des solaren Neujahrsfestes *Torcatl*. I 147, 150, 290 — seine Figur mit den zwanzig Tageszeichen verbunden. I 280–283 — Regengott des Nordens. I 351 — seine Verkleidung, Thier mit der spitzen Schnauze. II 282 — identifiziert mit *Ursa mayor* (s. *citlallachtli*), den Sternen in der Nähe des Nordpols. I 21, 149, 292 — als untergehende Sonne, verwandelt sich in den Mond. II 298 — Gott des Abends. II 12, 23, 32 — am Abendhimmel erscheinender Mond. II 23, 32, 33, 63,

298 — junger Mond. II 32, 35, 57 — mit Trachtzeichen *Quetzalcoatl*'s, Begleiter dieses Gottes, als vor dem Stern des Abends Dahinwandelnder. II 32 — auf dem Aschenhaufen. II 35 — eine der vier Ergänzungen *Nochipilli*'s. II 41 — Mond, dem ein Bein fehlt, dem an der Scheibe ein Stück hinten abgeschnitten ist; zunehmender Mond des Abendhimmels. II 12, 23, 32 — neben dem Mondgott erscheinend im sechsten Tonalamatl-Abschnitt. II 229 — als Krieger, geleitet *Quetzalcoatl* zum Norden der Unterwelt. II 49 — kniet auf einem mit Jaguarfell gepolsterten *teoicpalli* und genießt den Mais, im Westen der Unterwelt. II 57 — als Feuergott des Südens, auf dem *teoicpalli* knieend, in der Mitte der Unterwelt. II 74 — ihm entspricht in der Dresdener Maya-Handschrift ein schwarzer Gott mit dem Zeichen *imir* an der Stirn. I 216.

Tezcatlipoca-Figur, hält der Feuergott des Westtempels, in der Mitte der Unterwelt, auf seinem Schoosse. II 73, 74.

Tezcatlipoca-Figuren, fünf (schwarz, weiss, gelb, roth, blau), hervorkommend aus Steinmessern einer geköpften Göttin im Süden der Unterwelt. II 9 — vier (weiss, gelb, roth, blau) in den vier Eckabtheilungen des breiten, dunklen Aussenrandes von Bl. 32 des Codex Borgia. II 10, 12.

Tezcatlipoca-Gesicht, blaues, gelbes. II 10 — rothes, krönt den First des Hauses der rothen Schlange, II 19, 21.

Tezcatlipoca-Gesichtsbemalung, bei zwei männlichen Figuren am oberen Stufenpyramidenabsatz des Hauses der schwarzen Schlange. II 19 — wechselnd mit der *Aniateotl*-Bemalung (*motemmaacpalhuiticac*). II 110.

Tezcatlipoca-Gestalten, einzelne der *Aniateotl*. II 98, 100.

Tezcatlipoca-itztlacoliuhqui, vor dem Tempel des Nordens (Codex Bologna). II 110, 111 — im Codex Fajervary. II 111, 112.

Tezcatzoncatl, ein Pulquegott, Pulquepriester. I 139, 140 — s. *Tezcatzonco*.

Tezcatzonco, „im Tempel des Pulquegottes“. I 139; II 118.

Tezozomoc, Verfasser der *Crónica mexicana*. I 144 etc.; II 127.

Thales von Milet. I 83.

Thévet, Verfasser der *Histoire du Mexique*. II 42, 97, 292, 294, 295 — s. de Jonghe.

Thomas, Cyrus. II 123.

Thron, s. *teoicpalli*. — s. *petlatl-icpalli*. — s. *cam* (Maya).

Thürbalken, schwarze, beim Tempelgemache des Hauses der schwarzen Schlange. II 19 — rothe, bei dem entsprechenden der rothen Schlange. II 19.

Tiacapan, „die ältere“, eine der vier Schwestern der *Tlaçolteotl*. II 86.

Tiara, nach oben sich verbreiternd in den Farben des Türkisvogels, beim Feuergotte. I 121, 219 — s. *xihuhtotomacalli*.

tiçaoctli, weisser Pulque, vom Pulquepriester *Ume tochtli Papatzac* am Feste *Togotli* bereitet. I 139 — im *octecomatl*, das der rothe *Aniateotl* in seiner Linken hält. II 71.

tiçapan çacapan, auf Sitzen von weisser Kreide und von Gras; darauf stellen sich die *xiripeme* in Reihen auf. I 170.

tiçapapalotl iuipapalotl, „weisse Kreide- und Daumenschmetterlinge“ = Seelen der geopfertten männlichen Krieger. I 187; II 67, 297 — Gegenstück dazu: *Itzapapalotl* (?). I 187 — bezeichnet den Mittag, die siebente Tagstunde. II 297.

tiçatl, weisse Erde; Bemalung des Tanzgottes. II 188, 189 — des Tänzers. II 224, 282 — kreidefarbene Bemalung des Thürpfostens des *quauhtlicalli*, des Adlerhauses des Ostens. II 70 — s. Augenring. — damit das Gesicht der *otlamacac cuapipiltin* gemalt. II 91.

- tiçatl-iuhtl*, Kreide und Daunenfedern, Opferschmuck. I 160, 187, 348; II 20, 34 — am Seile des Hauses der schwarzen Schlange. II 20 — s. *tiçapapalotl inipapalotl*.
- Tiçoc*, mexikanischer König, liess den grossen *quauhtlicalli*-Stein anfertigen. I 146.
- tiefste Hölle** des Nordens der Unterwelt, in ihr der geopfert Knochenfarbene *Quetzalcouatl* dargestellt. II 52.
- Thier der Dämmerung**, die Fledermaus. II 85.
- Thier der Erde**, s. *tachtli*. — s. *colin*. — s. Wurm (I 37) — s. *colotl* (I 37) — s. *cipactli* (I 146) — s. *quimichin* „Maus“ (II 163).
- Thier der Mitte**, beim Herzen des knochenfarbenen *Quetzalcouatl*, die Schlange. II 54.
- Thier des Nordens**, beim rechten Arme des knochenfarbenen *Quetzalcouatl*, der Jaguar. II 54.
- Thier des Ostens**, beim rechten Beine des knochenfarbenen *Quetzalcouatl*, ein helles Thier mit Insektenfühlern. II 54.
- Thier des Südens**, beim linken Beine des knochenfarbenen *Quetzalcouatl*, der Puma mit *ciciltallo*-Augenstreifen. II 54.
- Thier des Westens**, beim linken Arme des knochenfarbenen *Quetzalcouatl*, die Ratte (?). II 54.
- Thiere**, s. vier Thiere. — s. fruchtbare Thiere. — s. zerstückelnde Thiere. — s. Ball spielende Thiere. — s. Kriegerthiere.
- Thierklauen**, Halsband daraus, s. *xopilecozatl*.

- Uacton* (s. *uactli*), Vogel, dessen gelächterartiges Geschrei als sehr übles Vorzeichen galt. I 294, 305; II 253.
- uauantli*, gestreifter, im Sacrificio gladiatorio geopfert Krieger. I 71.
- Uebel*, Mannigfaltigkeit derselben und ihre Abwehr. I 26.
- Ueberfluss*, Herr dessen, s. *Tonacatecutli*. I 78; II 206.
- überleitende Daten*. I 350; II 138.
- übermässiger Ehebruch*, die Zeit des *katun uuc ahau* (s. dort). I 314, 322; II 265.
- Uebernahme* benachbarter Kulte in México. I 207, 208.
- Uebertragung* der Gottheiten der zwanzig Tageszeichen auf die der zwanzig Tonalamatl-Abschnitte (mit Auslassung an elfter Stelle). II 209, 210 — der Gottheiten der dreizehn Himmel auf die dreizehn Stunden des Tages, wobei die siebente Stelle zum Range der dreizehnten erhoben wurde. II 295.
- u ch'a kak ahtoc* (Maya), „der Brenner holt das Feuer“, Zärrimonie bei den Zeichen drei *oc*, *men*, *ahau*, *chicchan*. II 9.
- uei citlalin* (= *huey citlalli*) „der grosse Stern“, *Quetzalcoatl* Planet Venus. II 16, 143, 162 — s. *citlalpol*.
- Uuei miccaihuitl*, grosses Totenfest; zehntes Jahresfest. I 68, 190; II 68 — s. *Otontecuhli*, *Xocotl*.
- Uei tecuilhuitl*, das grosse Herrenfest; achttes Jahresfest der Mexikaner, Fest *Xochipilli's*. I 132, 290; II 95 — fällt zusammen mit der Verschiebung der Stellung der Sonne im Zenith von Süden nach Norden. I 290 — veranschaulicht durch das Bild eines Häuptlings in Tanztracht. I 290 — durch *Xilonen*. I 290 — durch *Xochipilli*. I 290.
- Uei toçoztli*, das grosse Wachen; viertes Jahresfest, Fest der jungen Maisgöttin. I 33.
- Uei tonantzin*, unsere grosse Mutter; Göttin der Landschaft *Metztitlan*. I 137 — erstes Menschenopfer. I 137, 166.
- Uemac*, zu seiner Zeit sollen die Menschenopfer eingeführt worden sein. I 207.
- vetzi in chiquatl*, „Das Käuzchen fällt zur Erde (wird geboren)“, Name des *Tititl*-Festes. I 189 — Seitenstück zum *Xocotl uetzi*. I 190.
- uetziliztli*, der Fall; bei *Ueucoyotl* angegeben. I 98, 99; II 224 — bei *Itztlacolinqui*. II 252.
- Ueucoyotl*, der alte Koyote. I 97 — Tanzgott; Gott der *Otomé*; Regent des vierten Tageszeichens *Cuetzpallin*. I 97 bis 100, 215; II 73, 93 — des vierten Tonalamatl-Abschnittes (*ce xochitl*). I 98, 100; II 220–225 — = Tanzgott, gegenüber der Hirschgöttin, die die dritte Nachtstunde und den Norden bezeichnet. II 184–185 — Gott des Geschlechtstriebes. II 222 — mit Koyote-Kopf. II 222 — als rother Hund mit dem *ecallacatzcozcatl* = *Xolotl*, Totenbegleiter. II 224 — ihm geweihter Tag *matlaectli omome ocomatli* „zwölf Affe“. II 224 — gegenüber der *Xochiquetzal*, als Musikant, bezeichnet die fünfte Nachtstunde. II 188, 189 — ihm entspricht in der Dresdener Maya-Handschrift ein alter Gott mit einem Vogel auf dem Rücken und einer Schlange in der Hand, dessen Haupthieroglyphe gleich der des elften Gottes in der Reihe der zwanzig Götter ist. I 215, 216.
- Ueuteotl*, der alte Gott; der Feuergott. I 13 (ähnliche Frisur und Schmuck, s. kahlköpfiger Geier), 32, 116, 119; II 165, 297 — s. *Tonacatecutli*, *Tota*, s. *Xiuhtecutli*. — s. erster Mensch, Vorfahren.
- Ueuteotl*, hat neben sich den Skorpion (*colotl*). I 122, 123, 213 — daher Beziehung zur *Ilamatecutli*. I 213.
- Ueuteotl und Ilamatecutli* = *Tonacatecutli* und *Tonacacinatl*. II 206.
- Ueuteoteó*, an den Himmelsborten des Hauses der schwarzen Schlange, mit der Bemalung bald des Feuergottes, bald des Sternsgottes, bezeichnen die ersten Menschen, die als Sterne am Himmel aufziehen. II 19, 22 — in Tanzstellung. II 19 — ihre Region der Norden. II 22.
- ueueloa* „zerstören, zerstückeln“. I 283 — vgl. *teneuelli*.
- ueuetl*, *tlalpan ueuetl*, Fellpauke. — Trommel. I 160.
- ueuetque* „die Alten“; sie haben die Ordnung der Dinge begründet (*tlatlatitiri qujtocaitique*). II 88.
- ueuetque ilamatque*, alte Leute, im Anfangszeichen der ersten Venusperiode (*cipactli*) vom Speere des Planeten Venus getroffen (Osten). II 148, 156.
- ueuetzin* „alter Herr“, Name des Feuers. I 115, 116.
- ueue Xolotl*. I 193.
- Uexolotemoc*, s. *chalchiuhtotoltemoc*.
- uexolotl*, Truthahn; Vogel *Tlaloc's*, bezeichnet das Wasser. I 200; II 116 — oder *chalchiuhtotolin*, bezeichnet die neunte Tagstunde. II 297, 298.
- Uexotzinco*, Gott von —, ist *Camaritli* (= *Mircouatl*). I 260 — s. *Tlaxcallan*.
- ueyac tlacuelpacholli* = *teomimilli*. I 281.
- Uhde'sche Sammlung*, im Kgl. Museum für Völkerkunde, Berlin. II 193.

u hoppol u kak ahtoc (Maya), „das Feuer des Brenners beginnt“, Zärimonie bei den Zeichen zehn *oc, men, ahau, chicchan*. II 9.

uictli, Hacke zur Bodenbearbeitung. I 295, 332; II 128 — s. *ecauictli*, s. *quauhacatl*, *coa*. — in der Hand *Quetzalcouatl's* bei der vierten Nachtstunde. II 187.

uifouayan „wohin alle gehen“, der Ort der Toten. I 184.

Uinal (Maya), Zeitraum von zwanzig Tagen. I 313.

uipilli „Weiberhemden“. II 89.

uitequi „schlagen, Mais entkörnen“. II 42, 97 — Anspielung auf *tlauitequi*, s. *tlauitequini*, *Nanauatl*.

uitoncatl, Flügel (?), Nackenschmuck *Macuilrochitl's*, Residuum der *coxcortli*-Helmmaske. I 272 — s. *quetzaluitoncatl*. — s. *cuecaluitoncatl*.

Uitzilopochtli, hatte eine über die eines Lokalfetisches hinausgehende Bedeutung. II 131 — Stammgott der Mexikaner. II 67, 131 — seine Verkleidung ein Kolibri (*uitzitzilin*). II 67 — seine Farben blau und gelb. II 131 — Himmels-träger des Südens. II 129–131 — Feuergott. II 131 — Feuergott des Südens. II 131 — einer der *Tzitzimimé*. I 186 — junge Ostsonne. I 84, 206, 264 — seine feindliche Schwester, s. *Coyolxauhqui*. — seine feindlichen Brüder *Centzon-Uitznaua*. — verschmilzt mit dem Sonnengotte. I 85, 147, 206 — besiegt das Heer der Sterne. I 264; II 11, 131, 189 — zaubert den mythischen Mexikanern ein prähistorisches México, das *Colhuacan* oder *Tollan* vor. II 31 — tanzt den *cucatl tlaxotecayotl* und den *tecuihuicucatl*. II 31 — verwandt mit *Tezcatlipoca* als Sonnengott. I 147, 206 (als junger Gott); II 131 — der Priester der *Tecoinnan*, wendet sich am *Ochpaniztli*-Feste seinem Tempel zu. I 154 — auf seiner Pyramide Opferung der Gefangenen am *tlacaxipeualiztli*-Feste. I 170 — Opfer der *tlamatecutli* am *Tititl*-Feste. I 191, 192 — bei seinem Feste kam eine künstliche Feuersehle zur Opferblutschale (*quauhxicalli*) herab. II 40, 131 — wurde dann verbrannt (s. Feuerfest). II 131 — grosser Ballspielplatz vor seinem Tempel in der Hauptstadt México, genau nordsüdlich orientiert. I 289; II 131 — ein Appendix seines Heiligtums ist das Tempelchen der *Xochiquetzal*. I 209 — um sein Idol herum die *Tzitzimimé* „Dioses, signos y planetas“ (Tezozomoc) aufgestellt. II 127 — s. Himmels-träger. — trägt die Sterngesichts-bemalung (*mixcailhuicac*). I 254 — s. *Painal*. — sein Fest, s. *Torcatl*, *Panquetzaliztli*. — sein Teigidol trägt das *teominilli* oder *negac tlacuelpacholli*. I 281 — Name seines Schildes ist *teucuelli*. I 283 — opfert sich. II 145.

Uitzilopochtli-Mythus, Zerstücklung des Mondes. II 1, 10–11, 86, 290, 291 — s. *Coyolxauhqui*.

uitzitzilin, Kolibri, Heilmittel und Prophylacticum gegen Syphilis. II 67 — zerstört gleichzeitig aber die Zeugungskraft. II 67 — ist in der Trockenzeit tot. II 67, 131 (Anm. 1) — Verkörperung der wieder erwachenden Vegetation. II 106 — in der Regenzeit erscheinend. II 67, 106, 131 (Anm.) — auf dem Baume des Westens. II 106 — hängt mit seinem spitzen Schnabel an den Blüten des Kasteiungsblutes *Quetzalcouatl's* (im Codex Magliabechiano). II 96 — mit seinem spitzen Schnabel am Wanderstabe des fünften der sechs Himmelswanderer (*Tezcatlipoca* des Südens) hängend. II 163 — Verkleidung *Uitzilopochtli's*. II 77, 131 — bezeichnet den Süden (*uitznauac*). II 131 — Verkleidung *Quetzalcouatl's* auf dem Baume der aus dem Herzen der Mondstrahlenscheibe der *Xochiquetzal* im Süden der Unterwelt hervorgewachsen ist. II 66, 67 — Kolibri, Maske einer der neun *Quetzalcouatl*-Figuren. II 47 — (pl. *uitzitziltin*), Seele des toten Kriegers. I 62; II 67, 89, 297 — kommen am Mittag herab. II 89, 297 — veranschaulicht Seele des toten Königs in der vierten Venusperiode. II 151.

uitzitzilti, „die Kolibrivögel“, Plural von *uitzitzilin*. I 62; II 67, 297.

Uitznaua, fünf, Repräsentanten des vierten Tonalamatl-Viertels (Süden), Genossen *Macuilrochitl's* (s. *Auiatetecó*). II 13 — Begleiter der fünf *Cuatetecó*. II 13, 22 — sind Sterne (*tzitzimimé*). II 22.

uitznauac „an den Dornen“, Bezeichnung der Himmels-richtung des Südens. II 9, 10 — Region des Feuers. II 9.

uitznauac-Schlangen, mit Dornen besetzte Schlangen, zwischen den Beinen der Göttin des Südens (*uitznauac*) der Unterwelt hervorkommend. II 10.

uitznauac yaotl, Krieger im Südhaus, *Tezcatlipoca*. I 149, 292; II 23 — ist *tlatauhqui Tezcatlipoca*. II 23 — s. *Uitznauacatl*.

Uitznauacatl = *Uitznauatl*, Name *Tezcatlipoca's* und ein Rangtitel. I 149 — der „Südgott“. I 290; II 23.

uitznauacatlalpan „Land der Uitznaua“, der Süden. II 131.

uitzoli, Kopfbinde, mit dreieckig aufragendem Stirnblatt, s. *xihuitzoli* — aus Affenfell, mit Affenkopf bei *Pâtecatl*. II 143.

uitztla „Agaveblattspitze“, in der Hand der *Cinacouatl* (Lied an sie). II 128.

uitztlampā, Region der Dornen, Süden; ihm gehört das vierte Tonalamatl-Viertel, sein Regent *Tonatiuh*. I 24–26 — durch die gelbe Knochenschlange, die *Macuilrochitl* einschliesst, repräsentiert. II 302 — in der Reihe der neun Herren durch *Tepeyollotli* und *Tlaloc* vertreten. I 237, 238 — durch *Cinteotl* und *Tlaloc*. I 238 — seine Jahre bedeuten Unfruchtbarkeit und Mäusefrass. I 346 — bezeichnet die linke Seite der Welt (s. *opochcopa*). — dargestellt durch Sinnbilder der Kasteiung. I 92, 238; II 163, 164.

uitztli, Dorn, Agaveblattspitze, die bei der Kasteiung mit Blut beschmiert wird; s. *omitl uitztli*. — im Grasballen steckend, s. *çacatapayolli*. — an der Schnur des Tempels des Osthimmels. I 286 — am Seile des Hauses der schwarzen Schlange. II 20 — am Munde des schwarzen *Quetzalcouatl*. II 21 — in der Hand des toten, den Norden der Unterwelt betretenden *Quetzalcouatl*. II 49 — in der Hand *Cinteotl's*. II 114 — oben gespalten, vor *Tepeyollotli*, in der Cella des Hauses der rothen Schlange. II 21 — mit einer Blume und einem Edelsteinbande am Scheitel der Maisgottheiten des dritten der sechs Götterpaare. II 173 — mit einem *chalchiuhtl*, in der Hand *Quetzalcouatl's* (*chalchiuhtziti*). II 215 — vier in einen Stab gesteckt, bei *Tlaloc*. II 229 — im Fastenstrickknäuel, bezeichnen *chalchiuhtl*, beim *Chalchiuhtotolin*. II 272.

uitztli ezçó, blutige Agaveblattspitze. I 30, 143, 219; II 280.

uitzyecoa (*uitzyecoltia*, *nino*), „den Dorn kosten, das scharfe Getränk probieren — hacer la fiesta del vino“. I 253 — s. Herz vom Agaveblattstachel durchbohrt.

Uixtotin, s. *Omeca*.

Umfassungsmauern, von Zinnen gekrönt. II 38, 39, 40.

umgestürzter chalchiuhtl-Krug, unter dem Stuhle der *Chantico*. II 276.

Umlaufszeit des Planeten Venus, s. synodische Umlaufszeit. — s. Venusperiode. — s. Mond. — s. siderische —.

Umwallung des Westens der Unterwelt, besteht aus einem inneren *chalchiuhtl*-Streifen und einem breiten gelben Randstreifen mit abwechselnden Sonnenstrahlen und Maiskolben. II 56.

Umwallungen der Unterwelträume, s. auch Einzäunung.

Umwicklung des Feueropfers, schwarz bei *Itztli*. I 221 — gezackt bei *Cinteotl*. I 225.

Umzug um den Tempel (*moyaraloaya in teucalli*), Zärimonie des *Tititl*-Festes. I 190.

unbeschränkter Genuss, mit der Sonne in Zusammenhang gebracht. II 54 — s. Sünde. — mit der Zahl fünf (s.

- dort) verbundene Vorstellung. II 96, 97 — mit *Macuü-rochütl*, den fünf *Auiateteó*. II 97.
- Unbeständigkeit irdischer Güter**, die vom einen auf den anderen übergehen (s. *Tezcatlipoca*). I 151.
- unblutige Opfer** in *Tollan*. I 88, 207; II 1.
- Unbrauchbares**, unbrauchbar Gemachtes, für die Toten Bestimmtes, das Uralte. I 298, 339 — s. Zerbrochenes.
- Unfruchtbarkeit**, Zeichen der —, der Stein (*teſt*). I 107.
- Ungeheuerachen**, mit schwarzer Farbe gemalt, nach unten sich öffnend, beim *Tlaloc* des Nordens. I 346.
- ungesponnene Baumwolle**, s. *icheatl*.
- Unheil**, s. Bannen des Unheils.
- Unrath**, s. *tlacelli*, *tlacelquani*, *Tlacoteotl*.
- Unrathvogel**, s. Aasvogel. — *cozcaquauhſtli*. II 253.
- Unrath essen**, s. *tlacquani* — produzieren, s. *axixpan cuſtlapan nemini*. I 145.
- Unsichtbarer Gott**, s. *Tezcatlipoca*, *Youalli eccatl*, *ipalnemoani*, *teyocoyani teimatin*. — s. *ſtoque nauaque*; *Tſtlacauan*.
- Unsichtbarkeit** des Planeten Venus in oberer und unterer Konjunktion. I 350 — Dauer 90 und 8 Tage. I 350 — des als Morgenstern „gestorbenen“ Planeten Venus 77–80 Tage II 14 — im Codex Borgia 69 + 8 Tage. II 14, 15 — nachdem er Morgenstern gewesen, ein Durchwandern der unterirdischen Räume in den vier Richtungen. II 3–17 — nachdem er Abendstern gewesen, ein Durchwandern unterirdischer Räume nach den vier Richtungen (Codex Borgia Bl. 40–44). II 47 ff. — Beginn der Unsichtbarkeit des Planeten. II 58 — Venus, nachdem er Abendstern gewesen, zwölf Tage dauernd (von *chicuacalli* bis *macuilli quauhſtli*). II 16, 58.
- unten**, s. Richtung, s. *tlani*. — Unterwelt. I 149 — das Erdinnere, *Tſtlan*. I 296–299 — sechste Himmelsrichtung. II 177, 178, 179 — mit ihr beginnt der Turnus der sechs Himmelsrichtungen bei den fünfundzwanzig Götterpaaren. II 179 — am Anfange und Ende der fünfundzwanzig Götterpaare, erweckt die Vorstellung des Auf- und Absteigens. II 179, 180 — s. Schale mit der Mündung nach unten.
- Unten — Oben**. I 298.
- Unterarm**, menschlicher; für *Tezcatlipoca* charakteristisch, ein Symbol der Knochenflöte. I 167 — abgeschnittener. *temacpal*, im Schnabel des *Chalchihſtli* *tototlemoc*. I 297 — der einer *moſinaquetzqui*. I 298 — gilt als mächtiger Zauber. I 298.
- Untere Region**, die Erde, dem Sonnengotte gegenübergestellt. I 286 — bei der zwölften Tagstunde. II 205 — s. fünfte Weltgegend, Mitte der Unterwelt, Reich des Feuers. — s. Thier mit der spitzen Schnauze.
- Untergang der Welt**, s. Weltuntergang.
- untergehende Sonne**, *Tezcatlipoca*. II 12, 298.
- unterirdische Räume**, vom Planeten Venus durchwandert, nachdem er Morgenstern und nachdem er Abendstern gewesen. II 3–17, 46, 47
- Unterkiefer**, bei der Hieroglyphe *malinalli*. I 12 — s. auch Totenunterkiefer.
- Unterlippe**, herabhängend und verlängert beim schwarzen Gotte der Maya-Handschriften, dem Gotte der wandernden Kaufleute. I 322 ff.
- Untertauchen unter Wasser**, Strafe für Priester. II 230.
- Unterwelt**, s. *Mictlan*, *itzcuintli*, *Xolotl*. — Fluss der, s. *chicunauhapan*. — s. Dunkel, s. Norden. — Weg in die, geht über das Meer des Westens. II 269 — Eingang in die, der Norden. I 341; II 102 — s. auch gespaltener Berg, *Tepexic*. — Sonnengott, *Mictlantecutli*. I 297 — Mächte der, in der Quiche-Sage durch Sonne (*Hun ahpu* und *Xbalanque*) besiegt. II 1 — Vorraum zum Norden der Unterwelt. II 49 — in ihr weilt *Quetzalcouatl* vier Tage und vier weitere Tage ist er Knochen. II 16 — zum Hauptraume des Nordens der Unterwelt führen zwei Wege, auf denen je ein zum Leben und ein zum Tode bestimmter *Quetzalcouatl* wandert. II 49, 50.
- Unterwelten**, s. sechs —.
- Unterweltsfahrt der Venus**. II 1–75 — erste Wanderung. II 3–17, zweite. II 45–75.
- Unterweltsfahrt der Sonne** in der Quiche-Sage. II 1.
- Unterweltsstationen**, s. *tepetl imonamiquian*. II 12, 32 — s. *itzcucayan*. II 34.
- Unterweltsstrom**, im Westen gelegen; über ihn müssen die Seelen der Toten setzen, um an ihren Ruheort zu gelangen. II 62.
- unterwürfige Haltung**, verschränkte Arme. II 182, 183, 200, 202, 228, 238, 303.
- Uotan** (Tzeltal), Herz, Innerstes; Tageszeichen = mexik. *calli*, Hans. I 91 — entspricht dem mexikanischen Gotte *Tepeyollotli*. I 235 — „Herz“. I 235 — Herr der Holzpauke. I 235 — erster Mensch. I 235 — sein Schatz, der in einem Höhlentempel war, wurde 1691 auf dem Dorfplatze in *Huehuetan* verbrannt. I 235.
- Uraltes**, s. Unbrauchbares, Zerbrochenes. — weiter entwickelt zum Begriff des Heiligen, Göttlichen (*teo*). I 299.
- Urendequa vecara** (tarask), „der vorangeht“, Name des Morgensterns bei den *Tarasca* von *Michoacan*. II 70, 72 — s. *hozqua qhuangari*. — besonderer Gott der Stadt *Curinguaro*. II 72.
- Urgott**, *Iztac Mixcouatl*. I 308; II 164.
- Urgötter**, in Hirschgestalt erscheinend. II 164 — s. *maſatl*, s. Hirschverkleidung. — s. *Tabatzi* (Cora), *Mixcouatl*. — ihr Sitz *Tamoanchan*. II 263.
- Urgötterpaar** = Himmel und Erde; ihr Sohn die Luft (*Quetzalcouatl*, Luftgott). I 81.
- Urheimat der Stämme**, s. *Chicomoztoc*. — s. *Tamoanchan*. — s. Norden. — s. Westen, *Tecolhuacan*. — s. *Colhuacan*. — s. *geolichqui tepetl*. — s. *Chalchihſtli* *apazco*.
- Ursa maior** = *Tezcatlipoca*. I 149 — s. *citlallachſtli*.
- Ursprung** der Chichimeken — *Otomi*. I 264.
- Ursprung des Geschlechts**, repräsentirt das Feuer. I 116 — s. *Tota*.
- Urzeit**, Zeit der Frömmigkeit, s. Chichimeken. I 80 — Gott dieser Zeit *Tonacatecutli*. I 80 — s. auch *Itzpapalotl*, *Tamoanchan*. — Zeit vor der Geburt der Sonne (s. *Tſtlan*). I 220.
- Uſiäta** (Hopi), Truthahn, bei den Pueblo-Indianern Regenvogel. I 201, Anm. 1.
- Uterus**, Herrschaft über ihn hat das Tageszeichen *cuetzpalin*. I 280.
- utlamaxac nemini**, s. *ciuapipiltin*.
- u ſup kak ahtoc** (Maya), „der Brenner löscht das Feuer“, Zärimonie bei den Zeichen elf *oc*, *men*, *ahau*, *chicchan*. II 9.
- uuc ahau** (Maya) = mex. *chicome xochitl* „sieben Blume“; *Katun*, dessen Herr der Mondgott. I 311 — *Ekchuah*. I 322.
- uuc ahau**, dieser *Katun* ist eine „Zeit des Blumenregens, übermäßigen Ehebruchs“. I 322; II 265.
- Uxmäl**, Ruinenstätte. I 289 — Tempel der Gottheit des Planeten Venus dort (s. Casa del adivino, — de las Monjas) haben ihre Front dem Westen zugekehrt. II 140.
- u ziyaniſ Chac** (Maya), „Geburtstag des Chac“, in den Büchern des *Chilam Balam* die mit der Zahl neun verbundenen vier Tage des ersten Tonalamatl-Fünftels. II 6 — *bolon imix* = mex. *chicunauſi cipactli*. II 15.
- Vater Quetzalcouatl's**, der Vorgänger des letzteren, des Gottes des Abendsternes; seine Asche im *Quilazteopan* beigesetzt. II 34 — dieser Asche bezeugt *Quetzalcouatl* seine Reverenz. II 35.
- Vatikanische Bibliothek**, dort das Original des Codex Borgia aufbewahrt. II 44.

Vegetation, Gott der, der Feuergott. I 117 (s. *Izcaltl*). — s. *Xipe*. — Erneuerung der, s. Haut (*euatl*). I 155; II 18, 254 — s. *teocuitlaquemitl*. I 169 — s. Wechsel. — Erneuerung der, ausgedrückt durch eine Federschlange mit einem Kaninchen (*tochtli*) im Rachen. I 180, 296; II 259, 260 — s. *tlauquetzalpatia*. — Vorbild für ihr Wachsen ist der zunehmende Mond. II 11 — Absterben und Wiedererwachen derselben. II 11 — Verkörperung der wiedererwachenden ist der Kolibri (*uitzitzilin*). II 106.

Velletri. I 2 — s. manuscript de Velletri.

Venus, Planet; von den Leuten von *Tehuacan*, *Cozcattlan*, *Teotitlan* (del Camino) verehrt. I 178 — Mythologie und Wissenschaft dieser Zeitperioden bei den Maya fremder Import. I 336 — seine Sichtbarkeit als Morgenstern. I 238 (s. *ce acatl*), 350 — seine Mythologie. II 1–75 — seine Höllenfahrt. II 1–75 — Planet; seine Phasen (Konjunktion und Elongation). I 238, 350; II 1, 2, 11, 14–16 — synodische Umlaufzeit beträgt 584 Tage. I 238, 239, 327 — innerer Planet. II 11 — Veränderung der Lichtgestalt dieses Planeten mit unbewaffnetem Auge in México wahrnehmbar. II 11, 12–13 — zunehmend beim Erscheinen am Morgenhimmel, abnehmend beim leuchtenden Abendstern (umgekehrt wie beim Monde). II 12 — stirbt zweimal, je einmal bei Annäherung an die Morgen- und Abendsonne. II 13 — als Morgen- und Abendstern angedeutet durch je zwei Gestalten als Träger abgeschnittener Leichenköpfe in Adler- und Steinmesser-Verkleidung. II 13 — zunehmender Glanz bei Verkleinerung der Lichtgestalt des Planeten infolge Annäherung an die Erde. II 12, 13 — mit dem Gotte *Quetzalcouatl* identifiziert. II 1, 2 — seine Gottheit, s. *Tlauizcalpantecutli*. — seine Hieroglyphe, nach den fünf Weltgegenden geordnete Fünf, der Quincunx. I 255, 257 — die zwei verschiedenen Formen des Gottes dieses Planeten beruhen auf einer Verschiedenheit der Tradition oder des Ursprunges. I 257 — Anfangspunkt seiner Laufbahn ist der erste Tag des Tonalamatl's geworden. II 138 — sein Abbild ein dreitheiliges Strahlenauge am Brustschmucke (*anauatl*) *Tlauizcalpantecutli*'s. II 142 — seine Erscheinungsform der Feuergott oder die blaue Schlange (*xihcouatl*). II 308, 309 — die Tempel der Gottheit dieses Planeten haben in *Uxmal* ihre Front dem Westen zugekehrt. II 140 — hat Beziehung zu *Xipe*. I 176 — galt als schießender Gott. I 329, 330; II 143–157 — die fünf Gottheiten dieses Planeten in der Dresdener Maya-Handschrift (Bl. 46–50) entsprechen den Hüttern der fünf Venusperioden des Codex Borgia (Bl. 25). I 334 bis 336, 341 — von seinem Speere fünf Gestalten in der Dresdener Maya-Handschrift getroffen. I 336; II 153 bis 155 — Name des Planeten im Qui'che ist *i'co k'ih* „er sucht die Sonne“. II 2 — im mexikanischen *uei citlalín* „grosser Stern“ genannt. II 16 — *citlalpol* „grosser Stern“. II 143, 162 — als „grosser Stern“ besonders in *Yacatecutli* (von den Kaufleuten) verehrt. II 162, 164.

Venusperiode, die synodische Umlaufzeit des Planeten; in der Dresdener Maya-Handschrift und in den Handschriften der Codex Borgia-Gruppe dargestellt. I 238, 239, 327, 350; II 136 — ihre Länge bei der Konstruktion des Tonalamatl's massgebend gewesen. I 17, 239, 341 — synodische Umlaufzeit 584 Tage. I 238, 239, 327, 350; II 137 — mittlere Länge 583 Tage 22 Std. 6 Min. 40 Sek. II 137 — Anfänge der fünf auf einander folgenden, s. *cipactli*, *couatl*, *atl*, *acatl*, *olin*. I 239, 327, 337; II 137 — überleitende Daten. I 349, 350; II 138 — fünf auf einander folgende Perioden durch fünf aus Scheibe, Trapez und Art Schlangenzunge bestehende Gebilde bezeichnet (im Codex Vaticanus). II 138 — s. *yacaxiuatl*. — fünfte, ihr Anfangstag *matlactli olin*. I 327 — fünfte, an ihrem Ende

droht dem *altepetl* allgemeiner Weltuntergang. II 155, 156 — ihr Anfang für den Anfang des Tonalamatl's (*ce cipactli*) bedeutsam. I 239 — die fünf Perioden und ihre Hüter. I 327–336; II 153, 154 — die 4 × 5 Hüter der Perioden. I 238 bis 280 — der grosse Zyklus von 13 × 5 Perioden. I 255, 263, 334, 350; II 136–157 — auf Blatt 46–50 der Dresdener Maya-Handschrift. I 311, 333, 334 ff., 350; II 15, 153, 154 — zerfällt dort in Abschnitte von 90, 250, 8 und 236 Tagen. I 350; II 15, 153 — zerfällt im Codex Borgia in 243, 77, 252 und 12 Tage. II 14–16, 16.

Venusperioden, fünf davon = acht Sonnenjahren. I 176, 239 — dem Regenten der ersten, zweiten, dritten, vierten, fünften des Codex Borgia entspricht der zweite, fünfte, erste, vierte, dritte des Codex Bologna und Codex Vaticanus. II 143, 149 — ihre fünf Hüter bilden vier Reihen in entsprechenden verschiedenen Aktionen; Ausbohren des Auges, Darreichen ihres Abbildes, Herausziehen eines welligen Streifens aus dem Leibe einer menschlichen Figur, Darreichen der Brust. I 239 — die fünf —. I 327–336 — Gott des Planeten Venus schleudert seinen Speer in den fünf Perioden immer auf die in der entgegengesetzten Himmelsrichtung mächtige Gestalt. II 155 — mit der Zählung der Tage des Tonalamatl's in Übereinstimmung gebracht. II 138 — dreizehnmal fünf. I 255, 263, 334; II 136–157 — Venusperioden und Sonnenjahre. I 349–353 — ihre Mythologie und Wissenschaft auf dem Gebiete mexikanisch redender Stämme entstanden und von diesen den Maya-Völkern überbracht. I 336; II 157.

Venusphasen, im Codex Borgia: Tod des Morgensterns (Bl. 29). II 3–4 — Wanderung durch die Unterwelt nach Westen (Bl. 30–32). II 4–17, 46 — Aufgehen im Westen (Bl. 32, Ende). II 13, 14 — Wanderung am Abendhimmel der Sonne nach (Bl. 33–38). II 17–46 — Eingehen in die Erde im Westen (Bl. 39 u. 40). II 47–50 — Rückwanderung durch die unterirdischen Regionen (Bl. 40–44). II 50–69 — Wiedererscheinen des Planeten und Aufgehen der Sonne am östlichen Himmel (Bl. 45 u. 46). II 69–75.

Vera Cruz, Küste von, heisst *Chalchicucuyécan*. II 269.

Vera Paz, Gebiet in Guatemala; hiess früher *Toçolotlan* „tierra de guerra“. I 95.

Veränderlichkeit des Daseins, durch das Element des Wassers veranschaulicht. II 225 — durch den Mond (s. *ce miquiztli*), durch *Tezcatlipoca*. I 151; II 229.

verbranntes Feld, s. Feld, verbranntes.

Verbreitung, weite, der gleichen mythisch-figurativen Darstellungen und Vorstellungen. II 103.

Verbrennen des Opfers auf dem Altare zur Mittagsstunde, s. *Kinich-Kakmó*.

Verbrennung, s. *tetlatiliztli* — des *xihcouatl* am Feste *Panquetzaliztli*. II 131 — der Toten. I 126 — s. auch Selbstverbrennung.

Verbundene Augen, s. *ixquimilli*. — s. Gott mit verbundenen Augen.

Verderblichkeit, Symbol der; s. Steinmesser. (I 47).

Vereinigung des Morgensterns mit der Sonne am Tage vier *caban* = mex. *nani olin*. I 351.

Vereiterung des Penis, *tlapalanaltiliztli*. II 97.

Verfolgung durch die Xixipeme, Phase am *tlacaxipeualiztli*-Feste. I 170.

Vergänglichkeit, Sinnbild der, s. *malinalli*. I 12, 40, 52, 74, 129, 137, 244; II 2 — Sinnbild dessen, *atocoua*, Wasserstrom. II 225.

Verhängniss, s. *tzoastli tlaxapochtli*.

Verjüngung der Vegetation, s. *Xipe Totec*.

Verjüngungszauber (s. Selbstverbrennung *Quetzalcouatl*'s *Xolotl-Nanauatzin*'s). II 75.

verkappte Sonne, *Nanauatzin*. II 54, 55.

- Verkauf in die Sklaverei.** II 225.
- Verkörperung** des Wesens der zwanzig Tageszeichen durch Götter und Symbole, die in Beziehung zum Planeten Venus gesetzt wurden, in der Dresdener Maya-Handschrift. I 311.
- verkrümmte Füsse**, bei der fünften der fünf *Cuateteō*. II 91, 93.
- verkrümmte Gliedmassen**, bei *Xolotl* (*Nanauatzin*). I 191, 193, 195; II 52, 91, 93, 97.
- verkündender Tempelherold**, grüne en face-Figur. II 18.
- verlassene Eva**, *Ixnexthli*. II 224, 225.
- verlorenes Paradies**. II 225.
- Verschiebung**, der Götter der Tonalamatl-Abschnitte gegenüber denen der Tageszeichen. I 76, 129; II 209, 210 — des Anfangs der Reihe der zwanzig Tageszeichen und ihrer Gottheiten bei Mexikanern und Maya von *eipactli* (*imix*) auf *cuetzpalin* (*kan*). I 214, 215, 217, 308, 311, 342 — des Jahresanfangs in *Cuicatlan* im Codice Porfirio Diaz auf die Tageszeichen *ecatl*, *maçatl*, *malinalli*, *olin*. I 342 — der Jahresfeste, durch Kalendereinschaltungen verhängt. II 126 — der Stellung der Sonne im Laufe eines Jahres von Süden nach Norden. I 290 — s. *tlachli*, s. Zenith. — der Stellung der Sonne von Süden nach Norden; ihr Stand im Zenith, *Toxcatl*-Fest. I 290 — von Norden nach Süden; ihr Stand im Zenith, Fest der *Xilonen*, *Ueitecuilhuitl*. II 122 — s. *Volute*, blaue *Volute*.
- Vogelkopf**, bildet die Kreuzrosette (*tezcatitlapilli*) bei *Quetzalcouatl*, *Xochipilli*, *Pàtecatl*, *Tezcatlipoca*, und ist ein *coxcotli*. I 164 — bei der *Tlaçolteotl*. I 164 — am Hinterkopfe mit dem Element *etznab*, in Maya-Handschriften, entspricht *Xipe Totec*. I 311, 312.
- Vogelmaske** des Sonnengottes. II 89.
- Vogelpfeil**, in den Schlund des rothen Hundes (Grabbeigabe) gestossen. II 268.
- Vogelschnabelmaske** *Quetzalcouatl's*. I 245, 286, 302, 303; II 16, 32, 35, 131, 166, 167, 215 — bildet den Kopf eines *cipactli*-artigen Thieres, bei *Tonatiuh*. I 285 — bei einer der neun *Quetzalcouatl*-Figuren. II 47 — bei *Tezcatlipoca*. II 32, 35.
- Vogelverkleidung**, Sonnengott in —, bezeichnet die siebente Tagstunde, den Mittag. II 296, 297.
- Vögel**, s. Dreizehn Vögel. — vier, s. vier Vögel.
- Volcan del Fuego**, in Guatemala; in den Urwäldern dort lebt *Orcophasis derbianus*. I 319.
- Volksaberglauben**, vor Konstruktion des *Tonalamatl's* bestehend. II 86.
- voller Mond**, I 140; II 208 — (grosse) rothe Scheibe. II 30. seine Göttin: *Teteo innan*, *Tlaçolteotl*, *Toci*. II 18, 253.
- Vollmondverzierung**, rothe Scheiben am Tempel der Nacht. II 30
- Volute**, Verkümmerung aus dem stylisirten Vogelkopfe des Stirnriemens (beim Feuergotte). I 121; II 235, 238.
- vorangehender Krieger**, *iaqui telpochiaqui*, *Urendequa vecara* (tarask.), ist der Morgenstern. II 70.
- Vorderfuss**, s. rechter, linker —.
- Vorfahren**, die *Chichimeca*. II 165 — die Verstorbenen, Alten, toten Krieger. I 62; II 297 — vergöttlichter Vorfahr, *Uitzilopochtli*, mit dem Sonnengotte verschmolzen. I 84, 85 — im Kriege gefallener, Vorbild des *Xocotl uetzi*-Festes. I 190 — ihr Repräsentant ist *Otoncutli*. II 68 — ist *Mircouatl*. II 68 — ist der Feuergott. II 165, 297 — ihr Repräsentant, der Mond. II 74 — s. erster Mensch. — ihr Wohnort, *Colhuacan*. II 20 — der Norden. II 79, 116 — s. *Teoçolhuacan*, *Tamoanchan*. II 20, 25, 81 — symbolische Bezeichnung für sie: *tlauauantli*-Bein mit Kriegermaske. II 80 — s. *aotlotl*. — am Abendhimmel aufziehend, die zehn *Ueuetetô* und zehn *Ciuatetô*. II 20.
- Vorgänger** *Quetzalcouatl's*, s. Vater *Quetzalcouatl's*
- Vorhang der Erde**, der Leib der Erdgöttin, roth und mit Steinmessern gemustert, verschliesst die Mitte der Unterwelt. II 72 — durch ein Loch darin tritt *Quetzalcouatl* in die Unterwelt und deren verschiedene Himmelsrichtungen ein. II 45, 49, 55, 57 — durch einen Spalt darin verlässt *Quetzalcouatl* die Unterwelt. II 69, 70.
- Vorhang zum Himmel**, ihn bildet der Leib einer Erdgöttin, mit Symbolen des Himmels (Steinmesser, Lichtaugen). II 75.
- Vorraum** zum Norden der Unterwelt, vom Dunkel umwallt. II 49.
- Vorstoss von Adlerfedern**, an der Schambinde, s. *quauhiu-yacamaxtlatl*.
- Vorzeit**, ein Bild von ihr ist *Tamoanchan*. I 62 — s. Chichimeken, *Itzpapalotl*, *cozcaquauhtli*.
- Vukub cakix** (Qu'iche), „sieben Arara“, Dämon im *Popol Vuh*. I 42 — s. *alo*.
- Vukub hunahpuh** (Qu'iche), s. *Hun hunahpuh*. — Heros des Mondes. II 49, 50.
- Vulkan**, Abbild des Erdbebengottes *naui oçomàtli*. I 46 — beim Regengotte dargestellt. II 234 — s. *Popocatepetl*.
- Vulkangott**, s. Erdbebengott.
- vulkanische Asche**, s. *xaltetl*.
- Vulkanismus**, vulkanische Steine (Feuer in der Erde) mit dem Feuerregen (s. *tlequiauùtl*, *quiauh-tonatiuh*, *teçontli*) in Zusammenhang gebracht. II 278.
- Vulva**, blutige, bei der Todesgottheit. I 127 — aus ihr das Kind der *Tlaçolteotl*, die neue *Tlaçolteotl*, hervorkommend. I 157; II 252 — der Gottheit der Wollust mit dem Tageszeichen *xochitl* verbunden. II 305 — eines rothen Skeletts, daraus eine gelbe Figur hervorkommend, Geburt der Sonne über dem Ostmeere andeutend. II 48 — (?), daraus hervorkommende bunte Schlange. II 7 — aus ihr kommt ein Quetzalfederschmuck heraus bei der *Xochiquetzal* (*Quaxolotl*) der vierten Nachtstunde. II 186 — damit in Verbindung das neugeborene Kind der Göttin *Yei tcepatl*. I 240.
- Wachen**, hieroglyphische Darstellung. — s. *ixtoçoliztli*.
- Wachs**, Herzen daraus als Ersatz für Thierherzen in Yukatan beim Feste *Mac* geopfert. I 117.
- Wachsthum**, s. *izcalli*. — Vorbild für das Wachsthum der Vegetation ist der zunehmende Mond. II 11, 64, 86, 184 — s. *Xipe Totec*, s. geköpfte Göttin.
- Wachsthum**, monströses, bei *Xolotl* angedeutet. II 42, 43.
- Wachtel**, s. *çolin*. — Wachtelschmuck, bei der Maisgöttin des *Ochpaniztli*-Festes. I 158 — s. *çolin*. — Federn im Schmucke der *Tlaçolteotl*. I 163; II 217, 296 — s. *Xipe*.
- Wachtelblut**, damit der Sonnengott genährt. II 290.
- Wachtelfederschmuck**, auf dem Scheitel der *Tlaçolteotl*. I 163; II 217, 296 — Nackenschmuck der *Mayauel*. II 235.
- Wachtelschmuck**, Zeichen der Mondgötter (*Tlaçolteotl*, *Xipe Totec*). II 290.
- Wachtelopfer**. II 283, 290 — s. *tlauqueçcotonaliztli*.
- Waden**, daran Schellen gebunden. II 308.
- Wahrsagebücher**, s. *tonalamatl*. — enthalten die Geschehnisse der Neugeborenen. I 153 — ihre Form in alter Zeit. II 208.
- Wahrsagen**, s. Ausstreuen von Maiskörnern.
- Wahrsager**, s. *tonalpouhqui*. — zugleich Krankheitsbeschwörer. I 280
- Wahrsagerei**, von *Oromoco* und *Cipactonal* (s. dort) erfunden. II 191.
- Wahrsagerin**, s. Prophetin (*Xochiquetzal*).
- Wald**, den der Kaufmann durchwandert. I 294 — sein Herr ist *Tlauizcalpantecutli*. I 296.
- Waldhuhn**, s. *coçolitti*, s. *coç*, s. *ah mut*, *gaxcoç ah mut*. — als alte Göttin bei den Maya von Yukatan gedacht. I 303 — der *Tierra caliente*, eine Art dieser Gattung der *quetzalcocxotli*. II 95.
- Waldhuhnfedern**, im Nackenschmucke *Quetzalcouatl's*, s. *coçolito* *uei itepol*. — Krone daraus, bei *Xolotl*. II 265.
- Waldregion**, *teoquauhtla*, Westland. I 296.
- Wand**, schwarz-weiße, trennt *Xochipilli* und *Xochiquetzal*, das fünfte der sechs Götterpaare. II 176.
- Wanderer**. I 92, 93.
- wandern** nach Osten, s. Osten; s. *tonatiuh iixco yaqui*; s. *Quetzalcouatl*; s. Tolteken.
- Wandernde**, ewig —, die Sterne. II 162.
- wandernde Gestalt**, Begleitbild im *Tonalamatl* = Sternhimmel des Südens. I 52.
- wandernde Götter**, der rothe *Tezcatlipoca*. I 292, 293 — der blaue Gott mit Trachtzeichen *Quetzalcouatl's*. I 325.
- Wandernder**, sein Zeichen der Fächer (*ecacauaztli*). II 158.

- wandernder Kaufmann**, *Tlatlauhqui Tezcatlipoca*. I 293 — *pochtecatl*, *oztomecatl*, *anauac calaquini*, Kaufmann, der aus der pazifischen Tierra caliente heimkehrt. I 293.
- wandernder Priester**. I 28, 29 (= Feuergott), 45.
- Wandersage** eines in *Michoacan* angesiedelten toltekischen oder *Nauatl*-Stammes, auf dem Lienzo de Jucutácat. II 269, 270.
- Wandersagen**. I 264 — Wandersage der Azteken. I 264 — der Chichimeken. I 181.
- Wanderstab**, *topilli*. II 162 — *otlatopilli*. II 162 — in einen Schlangenkopf endigend beim Himmelswanderer, Begleitbild im Tonalamatl. I 52 — rother, in der Hand des rothen *Tezcatlipoca*, des wandernden Kaufmannes. I 293 — mit Opferpapieren beklebt, Abbild *Yacatecutli's*. I 324 — des blauen Gottes mit Trachtzeichen *Quetzalcouatl's*, ein in eine Blüthe endender Edelsteinstab. I 325.
- Wanderung des Planeten Venus** durch die Unterwelt, erste auf Bl. 29–32 des Codex Borgia. II 3–17, 25 — zweite auf Bl. 39–46. II 25, 45–75.
- Wärme**, erzeugt die Kinder im Leibe ihrer Mütter. I 79, 117 — = Leben. I 116.
- Wasser**, seine Farbe blau. II 43 — blau und weiss. II 234 — sein Abbild die Iguana, *cuetzpalin*. II 64 — s. *atl*. — Bemalung auf dem Gewande der *Mayaucl*, s. *atlacuiloli* — Kultusstätte des Regengottes. I 100, 237 — der *Chalchiuhtlicue*. I 229 — in der Hieroglyphe des Mondes. I 104 — Heraussteigen aus dem Wasser (bei *Xolotl*) = aus dem Meere des Ostens emporsteigende Sonne. I 58, 198 — Geburt aus dem Wasser, s. *Xolotl*. — wird in das Loch des *tlachtemalacatl* gegossen. I 290 — s. Brunnen. — nach den vier Himmelsrichtungen differenziert, durch vier Schlangen angedeutet (im rothen Wassergefässe). II 45 — Zeitalter des Wassers, *atonatiuh*. II 25 — Reich des Wassers. II 25, 33, 42–45 — bewirkt das Verwes in der dunklen Feuchte. II 42 — Ausmalung des Wesens *Xolotl's*. II 42 — bedeutet die Geburt, erzeugt Feldfrüchte, Mais, Lebensmittel. II 42 — das den Mais wachsen lässt, Regen. II 53 — angedeutet durch ein Maiskolbenbündel im Wasser bei der Darstellung der Geburt *Xolotl's*. II 53 — Ausmalung des Wesens *Xochipilli's*. II 42 — Vorstellungszusammenhang von *quetzalli*, *chalehuhtli* und *atl*. II 65 — sein Abbild die Feterschlange *quetzalcouatl* (*Xipe Totec* gegenüber). II 257 bis 262, 299, 302 — sein Symbol die Schlange. II 258 — bewegliches Element, Sinnbild der Vergänglichkeit. II 225 — auf seiner Oberfläche Maiskörner zu Weissagezwecken ausgestreut. II 174 — von *Xochipilli* aus einem Krüge auf die Erde geschüttet. II 175, 176 — in Verbindung mit einem Schädel und einer Kautschukugel auf dem Ballspielplatze (*tlachtli*), bei der *Xochiquetzal*. II 285 — schnelle Bewegung des Wassers, s. schießend. II 225 — mit Speeren, bezeichnet *teotl* der Metapher *atl* (*teotl*)-*tlachinolli*. II 238 — Untertauchen unter das Wasser, Strafe für Priester. II 230 — Hinabstossen eines Menschen in das Wasser, Determinativ beim zehnten Tonalamatl-Abschnitte. II 244 — hart gewordenen, gefrorenen Wasser, Kälte (*cecl*, *Itztlacoliuhqui*). II 247.
- Wasser der Erneuerung**, gelbe Fluth, Feuer des verbrannten *Xolotl-Nanauatzin's*, von zwei *Quetzalcouatl*-Figuren geschlürft. II 55.
- Wasserbehälter**, bleicher Spiegel des Mondes. II 260 — mit Schlangen, am *Atamalqualiztli*-Feste. I 211.
- Wasserfülle** beim Regengotte des Westens und der *calli*-Jahre. I 346, 348 — die Region des Westens (s. *acipactli*, *atl ayauican*). II 62.
- Wassergefäss**, Bemalung seiner Wandungen in Anlehnung an die Bemalung von Kalebassen. II 42 — verschlossenes. I 48 — als geöffneter Schnabel eines Vogels. I 9 — vor der *Chalchiuhtlicue*. I 228 — mit der Figur des Feuergottes Seler. Codex Borgia III.
- Xiuhcēutli* darin. I 229 — darin steht der *Tlaloc* des Westens. I 346 — mit der *Cinteotl* darin, Determinativ bei der *Tlaçolteotl* des Westens. II 81 — mit dem modernen *Xolotl*, durch Reihen weisser, schuppiger Gebilde geschlossen. II 42, 43.
- Wassergötter**, s. *Chalchiuhtlicue*. — s. *Chalchiuhtlatonae*. — als solche durch eine Schlangenmaske bezeichnet. II 45.
- Wassergottheit** der Maya, s. *Ah bolon tz'acab*. — der Mexikaner, s. *Chalchiuhtlicue*. — s. *couatl*. — ihre Insignien auf dem *teoicpalli* des Nordens. II 122.
- Wassergöttin und Maisgöttin**, jede mit ihrem Kinde, dem jungen Maisgotte, im Westen der Unterwelt, am *metlatl* Mais reibend. II 57.
- Wasserkrug** auf der Schulter des Fastenden (s. *moçauani*). I 204.
- Wasserlinien**, in blauer Scheibe (*anauatl*, Erdrund). II 107.
- Wasserperrücke**, blau, auf dem *teoicpalli* des Nordens. II 122.
- Wasserschale**, in diese steigt *Xolotl*. I 30 — aus ihr steigt *Xolotl*. I 57.
- Wasserspeier**, nach unten geöffneter Schlangenrachen. II 80 s. *aoztotl*.
- Wasserspender**, *Tlaloc* mit dem Zeichen *atl* in der Hand. II 300.
- Wasserstreifen**, rauchwolkenartig sich einrollend. II 43.
- Wasserstrom** bei *Xolotl*, bedeutet den Strom der Unterwelt *Chieunaukapan*. II 269 — darauf kniet die vom Speere des Planeten Venus in der ersten Periode getroffene *Chalchiuhtlicue*. II 149 — und Berg, ergeben den Begriff *atl-tepetl* = *atpettl*, Dorf, Gemeinde — Kriegerschaft. II 151, 152 — mit der Figur einer Frau, mit einem Speerbündel und einer Edelsteinperlkette (Schatzkiste), bei der *Chalchiuhtlicue*, = Verlust von Hab und Gut, Armuth, Verkauf in die Sklaverei (*atocoua*). Räucherwerk).
- yiz* (Maya), Name des vierzelnten Tageszeichens (*oclotl*) in Guatemala. I 306.
- yoalli tlavana* „Nachttrinker“, Name *Xipe*'s in einem an ihn gerichteten Hymnus. I 168, 170 — zusammengezogen in *Yonallauana*. I 170.
- yoaltica* „in der Dämmerung“, Zeit, wo der *quetzalcoarcoatl* singt. I 136.
- Yoalticatli*, Name *Xochipilli*'s im Liede. II 297.
- yoztzin* „junge aufschliessende Maispflanze“, Reverentialform von *onatl*. I 169.
- yolcayotl* „Schnecke, principio de la generacion“. I 105.
- Yolcouat Quitzalcouat* = *Yolcouatl* (?) *Quetzalcouatl* bei den Qui'che. I 83.
- yollo topilli*, Stab mit dem Herzen: Abzeichen *Xochipilli*'s und *Macuil xochitl*'s. I 134; II 235 — bei dem Trinker, gegenüber *Mayanuel* angegeben. II 235.
- Yopi* = *Tlappaneca*. I 167 — den Zapoteken verwandtes Volk; verehren *Totec tlatlahqui Tezcatlipoca*. I 149, 167 — s. *Tlatlahqui Tezcatl*.
- Yopico*, Tempel *Xipe*'s in México. I 167, 169, 177.
- yopitzontli*, spitze Mütze *Xipe*'s. I 12, 167, 177, 178; II 118 — ihre Form hat die Nasenplatte *Xipe*'s. I 167, 179; II 256 — bei den Zapoteken des pacifischen Küstenlandes I 177 — quer auf der dunklen Haarperücke, auf dem Königsstuhle des Ostens. II 121.
- Youallauana* = *Youalli tlavana* „der in der Nacht trinkt“, Name *Xipe*'s. I 170; II 18.
- youalli* „Nacht“, Rückendevisse des Gottes des Südens I 339.
- youalli eecatli* „Nacht und Wind“, bezeichnet die unsichtbare, schattenhafte Natur *Tezcatlipoca*'s. I 148; II 169 — Name der Gottheit. II 168 — von den *Chichimeca* verehrt (s. *ipalnemoani*). I 161 — bildlich dargestellt durch *Quetzalcouatl* und *Mictlantecutli* (Leben und Tod) Rücken an Rücken. II 168, 169.
- youalli-eztli*, s. schwarzer und rother Streifen.
- youalnepantla*, Mitternacht, durch ein von Dunkel umgebenes Auge bezeichnet. II 193 — durch einen Skorpion bezeichnet. II 193 — Hieroglyphe, vor dem Büsser dargestellt. I 39 — Zeit der Kasteiung (s. *tlatlapitzalipan, nenetequizpan*), II 193, 289 — bezeichnet die siebente Nachtstunde und die untere Region; ausgedrückt durch hirschköpfige *Xochiquetzal* und den Priester *Tlattecutli*'s II 193–194 — an der Spitze des Pfahles, der den

- Richtungsunterschied (oben-unten) ausdrückt. II 244 — bezeichnet den Norden. I 92 — den Mondgott. II 229 — zwischen *Xipe Totec* und *Xiuhtecutli*. II 289.
- Yaualtecutli**, Herr der Nacht; der Sonnengott in der Nacht. I 224; II 28 — ihm fünfmal Nachts geräuchert. I 224 — einer der *Tzitziminé*. I 186 — im blauen Tempelgemache des Tempels der Nacht. II 28 — Leuchte der Nacht (der Mond?). II 28 — bewohnt den eilften der dreizehn Himmel. II 294, 298 — bezeichnet die eilfte Tagstunde (die Abenddämmerung). II 298 — s. *Mictlantecutli*. — s. *alo*. — zusammen mit *Quetzalcouatl* auf dem *tlachtli* des Tempels der Nacht als Ballspieler. II 32 — gibt das *nerquinilli* der Asche des Vaters *Quetzalcouatl*'s an *Quetzalcouatl*. II 34. — Sonnengott der Unterwelt, im Osten der vom unsichtbaren Abendstern durchwanderten Unterwelt. II 47–49, 49, 56 — bringt die Geburt der toten Sonne zur Anschauung. II 49.
- Yaualtotecutin**, vier. II 32.
- yoxil oc** (Maya) „drei Hund“ = mexik. *yei itzcuintli*, Anfangstag einer Reihe von Zeichen des vierten Tonalamatl-Fünftels, bei denen Feuerzärmonien angegeben werden. II 9.
- Yucatan**, andere Anfangszeichen der Jahre. I 342 — dort übliche Beichte. I 162 — Penis durchbohrt. I 163.
- Zacate del carbonero**, Grasart, zu Strohseilen und Säcken geflochten = *malinali*.
- Zacken** der Flughaut des *Tlacatzinacantli*. II 60.
- Zackengefäss**, mit einer Blutschlange darauf, bei der *Tlaçolteotl*, dem zweiten der sechs Himmelswanderer. II 160.
- Zackengefässe**, Räuchergefässe. I 223, 224, 234, 237, 285, 301, 307; II 160 — eins über das andere gestülpt im Tempel *Tepeyollotli*'s. I 234 — bildeten den „Schatz *Uotan*“ in einem Höhlentempel, der 1691 in *Huchuetan* verbrannt wurde. I 235.
- Zackenhalskragen** beim Hunde (*Xolotl*). I 191.
- Zackenamm**, auf dem Hute *Itztlacoliuhqui*'s (bezeichnet die Zählung des geschlagenen Steines). II 246, 247.
- Zackenkrone** *Tlaloc*'s, grün und *olpiyauac*. I 330 — der Regengötter = Zinnen, Abbilder der Wolken (s. *microyotl*). I 110, 250 — *amacalli*, beim *Cinteotl*. I 224 — mit roth und weiss gemalten Querstreifen, bei *Xipe Totec*. I 304.
- Zackenlinien**, schwarze, auf Hackenkappen gewisser Gottheiten (s. *tlaitzcouacuilolli*). II 72 — auf dem *itzcouatlapechtli*. II 71, 72.
- Zahlen**, s. Gottheiten der Zahlen I–X. — Bildung der Zahlen 14–19 auf Maya-Monumenten durch Kombination von Köpfen der Zahlen 4–9 mit dem Kopfe der Zahl 10. I 214.
- Zahlsystem**, vigesimales, der Mexikaner. I 4, 16, 17.
- Zahlentheorie** des Venusumlaufes. I 341.
- Zähne** des Regengottes. I 110 — klein und spitz beim *Tlacatzinacantli*. II 60. — damit die Schambinde und die Enagua der *Itzapalotl* am Saume besetzt. II 262.
- zahnloser Mund**, Charakteristikum der alten Götter. II 44 — s. eingekniffener Mundwinkel.
- Zange** am Schwanzende des Skorpions in Maya-Handschriften. I 321, 324.
- Zapoteken**, s. *Tzapoteca*.
- zapotekische Weiber**, Haartracht, s. *tlacoyales*.
- Zauber**, mächtiger, Unterarm einer *mocuiquetzqui*. I 298 — der nöthig ist, damit die Sonne im Osten wieder aufgeht, s. Verwandlung *Xolotl*'s in *Nanauatzin*. (II 52. bis 55) — s. Kriegszauber. — s. Regenzauber.
- Zauberei**, erfunden von *Oromoco* und *Cipactonal* (s. dort) II 191 — Tod durch —, bezeichnet durch den Truthahn (*chalchiuhtotolin*). I 298.
- Zauberer**, *teyolloquani* (*teyollocuani*). I 5, 306 — s. *naualli*, *ix*. — tanzender bei der *Xochiquetzal*. II 282 — *zar' ēšozir*, *Tezcatlipoca*. I 148 — nehmen besonders die Gestalt von Jaguaren an. I 306 — sein Zeichen, ein menschlicher Unterarm. II 224 — weiblicher, s. *tlacatecolotl*, *Ircuinanné*. I 173 — die beiden alten, *Oromoco* und *Cipactonal* (s. dort). II 191 — als solche durch das Blutschlangen-Haarband bezeichnet. II 191.
- Zauberin**, *Xochiquetzal*, mit Maiskörnern Loos werfend. II 176 — s. Ausstreuen von Maiskörnern.
- Zauberkraft**, des Fingers oder Haares der *mocuiquetzqui*. II 89, 90 — ihres linken Armes. II 90.
- Zehn**, Kopf der Zahl —, auf Maya-Monumenten zur Bildung der Zahlen vierzehn bis neunzehn verwendet. II 214 — Gottheit dieser Zahl auf Maya-Monumenten ist *Matlactli calli* „zehn (Haus)“ zu lesen und entspricht sowohl *Tepeyollotli* als dem Skelettkopfe. II 217.
- zehn Gottheiten**, bilden eine Grundreihe und liegen der Reihe der zwanzig Gottheiten der zwanzig Tageszeichen zu Grunde. I 213–214ff. — bei den Maya. I 214, 318 — der Zahlen eins bis zehn auf Maya-Monumenten. I 215, 216.
- zehn Grad**, in weniger als 10° Entfernung von der Sonne ist der Planet Venus 77 Tage unsichtbar in oberer Konjunktion II 14, 15, 16.
- zehn Tage**, Grösse der Korrektur der mexikanischen Jahreslänge nach 42 Jahren. II 126.
- zehnte Tagstunde**, durch *chiquatl* und *Tezcatlipoca* bezeichnet. II 23.
- zehnter Himmel**, von *Tezcatlipoca* bewohnt. II 292, 294.
- zehn Ueuetetēō**. II 19, 20 — zehn *Ciuatetēō*. II 19, 20.
- Zeichen der Geminatio**, s. Geminatio. — s. *Xolotl*.
- Zeichen der Rede**, Hauchwolken vor dem Munde; bezeichnen den König (*tlatouan*). II 151.
- Zeichen des Jahres**, s. Trapez und Strahl.
- Zeichen des Krieges**, s. Schild, Speerbündel, Wurfbrett, Netztafche für Steinspitzen, Papierfähnchen. — s. Kriegswaffen. — zweimal, über der Mondfigur des Westens der Unterwelt. II 57.
- Zeichen des Opfers**, abgeschnittener menschlicher Arm, Herz, langgesticktes (ausgebohrtes) Auge, aus umgestürzten Schalen herausfallend beim Ballspieler des Nordens. II 116 — ähnliche, beim Ballspieler des Südens. II 117 — Blut, Herzen, gestielte Augen, auf der rothen Decke des kopulirenden Süd-Paares. II 120.
- Zeichen des Reichthums**, Edelsteinschnüre (in Blumen endend), ein *corcoatl*-Kopf. II 116 — Edelsteintopf mit Edelsteinschnüren. II 288 — Schale mit Mais. II 238.
- Zeigefinger**, Führen des Fingers zum Munde = *tlalqualiztli* „Erdesen“, demüthige Begrüssung. I 144 — Geberde der *Tlaçolteotl* des Südens. II 81.
- Zeit der Annäherung des Mondes** an die Sonne, der Süden. II 58.
- Zeit der Dämmerung**, Farbe *Mixcouatl*'s (weiss, weiss und roth gestreift, blau und roth). II 62.
- Zeit der Finsterniss**, der Nacht, bezeichnet der Mond. II 69 — s. *chi k'ekum*, *chi a'kab* (Qui'che).
- Zeit der Kasteiung**, s. *yualnepantla*. — s. *tlatlapiatzalipan* — s. *netetequizpan*.
- Zeit des Dunkels**, der Erde, s. *ocelotonatiuh*.
- Zeit des Feuers**, s. *quiauhtonatiuh*.
- Zeit des Wassers**, s. *atonatiuh*.
- Zeit des Windes**, s. *eccatonatiuh*.
- Zeit vor der Geburt der Sonne**, s. *chi k'ekum*, *chi a'kab* (Qui'che). — Zeit der halben Sonne, die nur schwach leuchtete. II 159, 160 — angedeutet durch Zerbrochenes. II 160 — Zeit der Dämmerung, des Feuergottes und des Morgensternes. II 238.
- Zeitalter**, s. vier präkosmische Sonnen. — s. Weltalter. — den vier Himmelsrichtungen entsprechend. II 122.
- Zeitalter der Reinheit**, der Frömmigkeit, die alte Zeit. II 206.

Zeitalter der Sünde, der *Katun* des Gottes *Ekchuah* bei den Maya. I 322 — Zeit des Blumenregens, übermässigen Ehebruches. I 322 — s. *uuc ahau*.

Zeitgott, *Tezcatlipoca*. I 147.

Zeitmesser, der Mond (s. Leben und Tod). II 169 — Sonne Mond, Morgenstern. II 292.

Zenith (*nepantla tonatiuh*). I 150, 205, 207, 274 290; II 13 — die Sonne bis dahin von den Seelen der toten Krieger begleitet. I 274; II 13, 87, 88, 238, 295, 296 — s. *Toxcatl*.

Zerbrochenes, Grabbeigaben. I 298 — bezeichnet das „Unbrauchbare“. I 298 — das Alte, Uralte. I 298 — in zwei Stücke gebrochener Knochen *Iztac Mixcouatl*'s. I 30; II 165 — bei *Xolotl*. I 30; II 268 — bei *Itzpapalotl*. II 196 — *tecpatl* und *omitl*, zerbrochen, deuten die Zeit vor der Geburt der Sonne bei der *Tlaçolteotl*, dem zweiten der sechs Himmelswanderer, an. II 160 — bezeichnet das Mythische, Heilige, Göttliche (*teo-*). I 299 — Mahlstein-Handwalze (*metlapilli*) bei der alten Göttin, der ersten Frau. I 213, 298, 299 — die Werkzeuge der Kasteiung (*omitl*, *uitztli*, *itzli*) bei *Tonatiuh*. I 285 — bei *Quetzalcouatl*. I 286 — bei den Gestalten der zehnten Nachtstunde. II 200 — *omitl*, bei der zweiten Tagstunde. II 184 — Grabscheit *uictli*, bei *Tlaloc* dargestellt. I 295 — Topf, von der *Chalchihuitlicue* im *mecapalli* getragen. I 287 — s. Blütenbaum, zerbrochener = *Tamoanchan*, Urheimath der Stämme. — Baum bei *Tlatlauhqui Tezcatlipoca*. I 293 — *omitl*, *uitztli* und *acrogatl* beim Gotte des Südens. I 339 — vergl. auch: *Zerrissenes*, in Stücke.

zerfetztes Ohr *Xolotl*'s. II 42, 43.

zerrissen, Leib der die Einzäunungen bildenden Todesgöttin; bedeutet Oeffnung. II 3 — der den Leib einer Todesgöttin bildende Zeugstreifen in seiner Mitte in einer breiten Oeffnung zerrissen. II 75 — in Stücke, Schlange bei *Xolotl*; Sinnbild des Feuers. II 272.

Zerrissenes, in Stücke, Schnur, bei *Tonatiuh*. I 285 — *tlapalcouatl*, bei *Quetzalcouatl*. I 286 — bei *Chalchihuitlicue*. I 287 — bei den beiden *Tezcatlipoca* auf dem Ballspielplatze. I 289.

Zerschlagen des *Tonacatepetl* durch *Nanauatl* auf Geheiss der Götter. II 97.

zerstörende Mächte, nach den vier Himmelsrichtungen vorgeführt in den vier zerstückelnden Thieren. II 117, 119.

Zerstückeln. II 9, 11 — bezieht sich auf die Mondscheibe. II 11.

zerstückelnde Thiere, vier, im Süden der Unterwelt dargestellt und ihre Entsprechungen in anderen Handschriften. II 59–65 — s. *tzinacantli*, *occlotl*, *acipactli*, *quauhtli* und *tochtli* (*cuetzpalin*) im Rachen der Schlange. — reissen den grossen Himmelskörpern Theile ihres Leibes ab und verursachen so Phasenbildungen (besonders des Mondes). II 65 — vier, im Codex Borgia, *tzinacantli*, *occlotl*, *quetzaltototl*, *quauhtli*. II 65, 67, 68, 117 — vier, im *Popol Vuh*, *cot*, *c'ama zo'tz*, *cotz balam* und *tucum balam*. II 69.

zerstückelter Mond, von der Sonne zerschnitten, getötet, = *Cinacouatl* (*Quilaztli*). II 86, 87.

Zerstückelung des Mondes bei seinem Näherücken an die Sonne, Mythos von *Uitzilopochtli* und den *Centzonuitznaua*. II 1, 10–11, 11, 12, 13 — des menschlichen Leibes, bezieht sich auf Phasenbildungen von Himmelskörpern

(besonders Mond). II 58, 63, 64 — durch das rothe, gelbgefleckte Skelet (s. dort) ausgedrückt. II 309 — des Mondes, findet beim Entgegenrücken des Mondes an die Sonne, im Süden, statt. II 13, 58, 145 — endet mit dem Tode der Mondgöttin im Neumonde. II 13 — des Morgen- und Abendsternes durch die Sonne. II 145 — der *Coyolrauh* durch *Uitzilopochtli*. II 10, 86 — des Planeten Venns. II 11 — ihre Region, der Süden. II 58, 59 — durch den Jaguar bezeichnet. I 94.

zerstückt, Blutstrom, bei der *Cinacouatl* des Südens (in verschiedene Schlangen zertheilt). II 93.

zerstückte Gliedmassen im Kochtopfe, s. Kochtopf — s. *Xolotl*. — s. *Xolotl-Nanauatzin*. — in Feldern der Quadranten des Südens der Unterwelt. II 58.

zerstückter Mond. II 55.

Zerstücktes, Geköpftes, Idee ausgedrückt beim Süden der Unterwelt. II 9, 10.

Zerstücktes, Zusammenbrennen oder -kochen des Zerstückten bedeutet jede Art der Erneuerung. II 55.

zerzupfter Stoff, s. *tlacolrochitl*.

Zeugen der Geburt der Sonne über dem Ostmeere, *Tlaçolteotl* und *Tlatlauhqui Tezcatlipoca*. II 48 — des Verschwindens des schwarzen und rothen *Quetzalcouatl* in der Erde sind drei Götter in je zwei Reihen. II 46.

Zeugung, Sinnbild der, *chicauatzli*. I 174; II 128 — s. *mamalhuatzli*. — s. Zeugungsgötter. — s. *Tonacatecutli*.

Zeugung und Nähren bedeuten die zweiten beiden Reihen der fünf Hüter der Venusperioden. I 241.

Zeugungsgötter, s. *Tonacatecutli*, *Tonacaciuatl*, *Ometecutli*, *Ometciuatl*. — s. *Quetzalcouatl*. — s. Mondgott (*Tecciztecatl*). — s. *Xochipilli*. — s. *Ueucocoyotl*. — s. *Ometecutli*, *Tonacatecutli*. — s. *Quetzalcouatl*. — s. *Ueueotl*, in *teteu imman*, in *teteu inta*. — s. *Nipe Totec*. — s. Sonnengott. — sind zugleich Götter der Lebensmittel (s. diese). I 207 — in *Tollan* angerufen. II 1.

Zeugungskraft, s. *cuetzpalin*. I 7 — zerstört durch das Heilmittel und Prophylaktikum gegen Syphilis, den Kolibri (*uitztizilin*). II 67.

Zickzackband, schwarzes, Abbild der *itzcouatl*. I 152 — auf der Hackenkappe der Sandale *Tezcatlipoca*'s. I 152.

Ziffern, bei den fünfundzwanzig Götterpaaren angegeben. II 178 — schreiten von zwei bis sechsundzwanzig fort. II 178 — Erklärung hierfür. II 178–179.

Zifferreihen in der Dresdener Maya-Handschrift. I 350.

Zinan (Maya), Skorpion. I 321.

Zinnen (*miroyotl*, *mirrotl*), Abbilder der Wolken. I 29 — an einer rothen Scheibe, aus der eine Feuerschlange hervorkommt; s. runder Feuerheerd. II 38, 39, 40 — davon umgebener Hof, auf einer doppelköpfigen Schlange ruhend. II 103.

Zopf, langer; auf Priester deutend. I 68 — Haar der Krieger in Zöpfe geflochten. I 154 — Tracht der Zapoteken. I 235.

Zopfband, ein *tlapalcouatl*-Schwanzende, beim blauen *Aniateotl*. II 305.

zornige Erdgötter = verfolgende *Xiripeme*. I 170 — versöhnt durch ein Hauptopfer. I 171 — ein solcher, zornig umherlaufend, hiess in Tlaxcala: *Ircuinan*. I 173.

Zo'tzil der Provinz Chiapas. I 235.

zugespitzter Federstab (s. Federpose), Kasteiungsinstrument. II 161, 163.

zunehmender (wachsender) **Mond**. I 140 — Vorbild für das Wachsen der Vegetation. II 10 — *Nipe Totec* (Gott in der neuen Haut). II 18 — am Abendhimmel = *Tezcatlipoca*. II 12, 23, 32, 35, 63, 298 — junge Göttin, *Nochiquetzal*. II 32, 66.

Zunft der Steinschneider (s. *tlatequē*), stammt aus *Xochimilco*. II 273 — s. *Chantico*.

Zunge, von *Tepeyollotli*, in der Cella des Hauses der rothen Schlange weit hervorgestreckt. II 21 — lang herunter

- hängend, in dem Jaguarrachen, der dem Gesichte der Mondfigur des Abendhimmels eingesetzt ist. II 56 — Durchlöchern der Zunge mit Halmen oder Stäben als „confesion exterior“, I 211, 212; II 181, 199, 215 — Loch in der —. — s. *çacatl*.
- Zuñi**, Pueblo-Indianer; bei ihnen der Truthahn Regenvogel. I 200, 201.
- Zurückbleiben** hinter der Sonne, beim Monde. II I, 2 — beim Planeten Venus. II 2.
- Zurückwenden des Kopfes** beim Hunde (*Xolotl*). I 191.
- Zusammenfügen**, Zusammenbrennen, Zusammenkochen — bedeutet jede Erneuerung. II 55.
- zusammenschlagende Felsen**. II 12.
- Zwanzig**, Grundlage des mexikanischen Zahlensystems. I 4, 16, 17; II 207 — Maya-Zahlhieroglyphe, Kopf mit dem ausgebohrten Auge. I 317.
- zwanzig Abschnitte**, dreizehntägige, des Tonalamatl's, ihre Gottheiten I 76; II 208—289.
- zwanzig Dreizehnheiten**, abwechselnd rechts und links bei der Darstellung des Gottes des Lebens und des Gottes des Todes in der irdischen Region. II 165, 169.
- zwanzig Gottheiten**, bilden eine sakrale Reihe. I 76; II 209 bis 210 — setzen eine Grundreihe von zehn Gottheiten voraus. I 214, 308, 318 — haben Beziehung zur Reihe der zwanzig Gottheiten der Dresdener Handschrift. I 214, 215, 308, 309 — fangen in letzterer mit der vierten Gottheit der Codex Borgia-Gruppe an. I 214, 215, 308 — eine andere Reihe, im Codex Borgia. I 301—326 — verglichen mit den zwanzig Göttern der Dresdener Maya-Handschrift (Bl. 46—50) und den fünf Göttern des Ostens (Bl. 24) I 309, 310—326 — zweite Reihe in der Dresdener Maya-Handschrift, in Hieroglyphen angegeben (Bl. 46—50). I 309, 310—326 — hat Beziehung zur Venusperiode. I 311 — der Codex Borgia-Gruppe parallelisiert mit der Reihe des Codex Dresdensis. I 215—218, 308.
- zwanzig mal dreihundertundsechzig Tage**, bei den Maya *Katun* genannter Zeitraum. I 322.
- zwanzig Tage**, Grösse der Korrektur des Kalenders bei einer einundachtzigjährigen Periode im Codex Nuttall. II 126.
- zwanzig Tageszeichen**, in zwei parallele Reihen von je zehn geordnet. I 213, 214, 308; II 209—210 — bei einer anderen Reihe von zwanzig Gottheiten im Codex Borgia. I 301 bis 326 — haben theilweise Beziehung zu den entsprechenden Maya-Formen. I 308 — ihre Namen. I 5, 5—16 — mit dreizehn Zahlen zum Tonalamatl kombiniert. I 4, 16, 17, 76 — ihre Gottheiten. I 75—217; II 209—210 — erstes der Tageszeichen (mexik.) s. *cipactli*, s. *cuetzpalin*; (Maya) s. *kan*. — Ursprung. I 75 — haben Ordinalzahlwerth. I 76, 301 — mit der Figur *Tezcatlipoca*'s verbunden. I 280 — mit *Xochipilli*, dem Gotte der Lust, verbunden. II 134—136 — bei den Göttern der Wollust dargestellt. II 305 — mit einem Menschen mit *tonallo*-Emblem auf schwarzem Stirnfelde (*Xochipilli*) verbunden. II 136 — bei den toten Göttern oder der Abendsternreihe. I 337 — bei den vier Stützen des Himmels und den vier Säulen der Erde angegeben. II 126 — mit einem Hirsche verbunden (an den Körpertheilen). II 135 — mit Körpertheilen *Quetzalcoatl*'s und *Mictlantecutli*'s (in der himmlischen Region), im Codex Vaticanus verbunden. II 168 — ihre Reihe beginnt in der Dresdener Maya-Handschrift mit dem vierten Tageszeichen *kan* (mexik. *cuetzpalin*). I 215, 308 — sonstiges Vorkommen. II 4 — in eigenthümlicher Anordnung bei den fünf Venusperioden und ihren Hütern angegeben. I 327—336 — fünf davon entfallen auf die Anfangstage der auf einander folgenden Venusperioden. I 239, 327; II 137 — vier davon entfallen auf die Anfangstage der auf einander folgenden Sonnenjahre. I 342—345 — bei den sechs Himmelswanderern; maassgebend für diese sind *cipactli*, *calli*, *miquiztli*, *itzcuintli*, *ocelotl*, *quiauhtl*. II 157.
- Zwei**, Ziffer, mit der die fünfundzwanzig Götterpaare beginnen. II 178 — Gottheit dieser Zahl ist auf Maya-Monumenten noch unbekannt. I 217.
- zwei Adlerfederbüsche**, vertreten *ome quammamalitti* beim Feuergotte. II 282.
- zwei ausgerissene Augen**, Determinativ des Todesgottes, des Ballspielers des Südens. II 117.
- zwei Ballspieler**. II 32.
- zwei Ballspielplätze**, einer schwarz, einer roth. II 23 — s. *yayauhqui*, *tlatlauhqui Tezcatlipoca*.
- zwei Bänder** (Blumen?), mit einer Schleife zusammengebunden, in der linken Hand *Xolotl*'s (als Zeichen der Geminatio). II 37 — in der Hand von vier schwarzen *itzli*-Figuren. II 38 — in der Hand von zwei weiblichen Figuren. II 38.
- zwei Blutschlangen**, das aus den beiden Aorten hervorschiessende Blut bei der Kolossalfigur der sogenannten *Teoyamiqui* bezeichnend. I 90.
- zwei brennende Kautschukugeln**, oder Kopalkugeln, auf ihnen steht der Erdbegott *Nauí olin* der Wiener Handschrift. I 283.
- zwei chalcuihl** = zwei Kinder, bei der neunten Nachtstunde. II 198.
- Zweideutigkeit** der Vorstellungen. I 95.
- zwei Edelsteinscheiben**, des auf dem Kreuzwege liegenden knochenfarbenen *Quetzalcoatl*. II 54 — auf der Stirnbinde *Quetzalcoatl*'s. II 47 — einer der neun *Quetzalcoatl*-Figuren. II 47.
- zwei Edelsteinschnüre**, in einander verschlungen, blau-gelb, Musik oder Gesang andeutend, Determinativ beim Ost-Ballspieler. II 116 — ähnlich aus dem Munde *Nipe Totec*'s herauskommend. II 133.
- zweifarbige Bemalung**, s. *chictlapancui*, der Pulquegötter. I 7 (Symbol von Tag und Nacht), I 45, 111, 141 — des Gesichtes bei *Quetzalcoatl*. I 20, 111, 141 — s. blau-roth, der Trachtstücke *Tlaloc*'s. I 112, 141 — der spitzen Mütze *Quetzalcoatl*'s. — s. *copilli*.
- Zweifarbigkeit**, *chictlapancayotl*, des Pulquegottes (*Pâtecatl*). II 244, 245.
- zwei Federbanner**, auf dem *Xochicalli*. II 48.
- zwei Federbüsche**, auf dem Scheitel der *Xochiquetzal*, s. *ome quetzalli*.
- zwei Feuereschlangen**, verschlungen, über dem Pulquegefässe zwischen den Göttern des zweiten der sechs Götterpaare. II 173.
- zwei Formen** des den Norden der Unterwelt durchwandernden *Quetzalcoatl*, s. lebender (schwarzer) *Quetzalcoatl*; s. knochenfarbener *Quetzalcoatl*. II 49, 51.
- zwei Fussspuren**, Geburt von Zwillingen andeutend. I 31 — nach oben gehend, über gekreuzten Totenknochen, bei der elften Tagstunde (Süden), bezeichnen den geopfertem Krieger. II 203.
- zwei geköpfte Menschen**, ihr Blut färbt die Decke des kopulirenden Nord- und Südpaares roth. II 120.
- zwei gelbe Klapperschlangen**, im Haare *Quetzalcoatl*'s. II 214.
- zwei Generationen**, im *Popol Vuh* angenommen, um das Problem des Verschwindens und Aufgehens von Sonne und Mond zu lösen: ältere Generation, *Hun hunahpu* und *Vukub hunahpu*; jüngere, *Hunahpu* und *Xbalanque*. II 50.
- zwei Gesichter**, Maske damit, beim *Tititl*-Feste. I 192.
- zwei Geweihe** trägt der Hirsch, auf dem *Xolotl*-Blatte.
- zwei Haarflechten**, auf dem Scheitel aufragend, bei *Tepegollotli*. I 232; II 187 — am Scheitel aufragend, bei *Xochiquetzal*. II 192 — hornartig aufragend, Tracht der mexikanischen Weiber. II 181, 182, 187.

- zwei Haarwülste**, auf dem Scheitel der *Tepeyollotli*-Köpfe bedeuten Zwillingsbildung. II 187.
- Zweiheit**, Zwillingsbildung durch zwei auf dem Scheitel aufragende Haarwülste bei *Tepeyollotli*-Köpfen angedeutet. II 187.
- zweihenkliger Krug**, mit Stufenmäänder, Edelsteinketten und vier Arten von Mais und einem nackten Männlein, bezeichnet Wachstum (*izcalli*) der Maisfrucht. II 174, 175.
- zwei Herzen**, vom Pfeile durchbohrt, im *quauhricalli* des Ost-tzompantli's. II 115.
- zweihundertdreißigstägiger** Abschnitt der Venusperiode, bezeichnet Sichtbarkeit des Planeten Venus als Morgenstern im Codex Borgia. II 16.
- zweihundertsechsdreißigstägiger** Abschnitt der Venusperiode, bezeichnet Sichtbarkeit des Planeten in westlicher Elongation als Morgenstern in der Dresdener Maya-Handschrift. I 350; II 15, 153.
- zweihundertfünfzigstägiger** Abschnitt der Venusperiode, bezeichnet das Erscheinen des Planeten in östlicher Elongation als Abendstern in der Dresdener Maya-Handschrift. I 350; II 15, 153.
- zweihundertsechszigstägige** Periode, s. *tonalamatl*.
- zweihundertundzweiundfünfzigstägiger** Abschnitt der Venusperiode, bezeichnet die Sichtbarkeit des Planeten Venus als Abendstern im Codex Borgia. II 16, 46, 58 — s. *matlactli omei itzcuintli*. — s. *macuilli cecatl*.
- zwei Kautschukugeln**, davon eine brennend, neben dem Bandvierecke. II 284.
- zwei** (in einander gefügte) **Kettenglieder**, bei dem aus der Vulva der *Tlaçolteotl* heraustretenden Kinde, bedeuten Kombination, Erneuerung des Lebens. I 157; II 252.
- zwei Knochendolche**, Nasenflügelschmuck. II 150.
- zweiköpfige Göttin**, s. *Quaxolotl* (*Xochiquetzal*). — s. *Chantico*.
- zweiköpfige Schlange**, s. *maquizecouatl*. — s. doppelköpfige Schlange.
- zwei Kugeln**, bei *Xolotl*. I 31, 58.
- zwei lebende Quetzalcouatl-Figuren**, schlürfen die gelbe Flut, das Feuer, des verbrannten *Xolotl-Nanauatzin* aus dem *quauhricalli*. II 55.
- zwei Locken**, über der Stirn lang aufzüngelnd, Zeichen des Morgensternes, der Gestirne, von Lichtwesen. II 12 — s. Locken.
- zwei Maiskolben**, charakteristische Beigabe in der Hand der Maisgöttin. I 209 — bei der *Tonacaciuatl* dargestellt. II 27.
- zwei mal dreizehn**. II 179.
- zweimaliges Sterben des Planeten Venus**, bei Annäherung an Morgen- und Abendsonne. II 13 — durch Figuren als Träger abgeschnittener Köpfe veranschaulicht, theils in Adlermaske (Morgenstern), theils in Steinmesser-verkleidung (Abendstern). II 13.
- zwei männliche Figuren**, mit *Tezcattlipoca*-artiger Gesichtsbemalung und in den Nasenflügeln mit zwei *yacariuilli*, am oberen Stufenpyramidenabsatz des Hauses der schwarzen Schlange. II 19 — die eine gelb, die andere roth. II 19.
- zwei Meerschneckengehäuse**, weiss und roth punktiert. II 71.
- zwei nackte Tlaçolteotl-Figuren**, assistiren dem knochenfarbenen *Quetzalcouatl* unter dem Taufwasser. II 51.
- zwei Parteien**, gehören zum Ballspiele. Daher *Xolotl* Gott der Zwillinge geworden. I 193.
- zwei Personen**, streitend (?), durch eine rothe Schlange (*tlapalcouatl*) verbunden bei der neunten Nachtstunde. II 197, 198.
- zwei Pfeilschäfte**, bezeichnen den Feuerbohrer. I 231 — in der Krone des Feuergottes, s. *ome quammamalitli*. — bei dem ersten Menschenpaare. I 81, 82 — s. *ome acatl*.
- zwei Pulqueschalen**, veranschaulichen das Fest bei den Tanzgöttern der dritten Nachtstunde. II 185.
- zwei Quetzalfederbüsche**, charakteristisch für *Xochiquetzal*. I 209, 212, 247, 352.
- zwei rechteckige Streifen**, auf einem Gefässe (Kakaogefäss). II 33, 34 — auf Schmuckscheiben. II 34.
- zwei Reihen** von je drei Göttern, Zeugen des Verschwindens vom schwarzen und rothen *Quetzalcouatl* in der Erde. II 46.
- zwei rothe Schlangen**, s. rothe Schlangen.
- zwei Saugrohre** (*piatzli*), im *quauhricalli*, bei der eilften Tagstunde. II 202, 203.
- zwei Schlangen**, ersetzen den abgeschlagenen Kopf der *Couatlilcue*. I 90; II 184, 264 — des Sünders bei der *Itzpapalotl*. II 264 — damit unwundener Kopf, s. Kopf mit zwei Schlangen unwunden. — würgen am Halse des Sünders, bei der *Itzpapalotl*. II 264.
- zwei schwarze Längsstreifen**, auf dem Gesichte und Hute *Itztlacoliuhqui*'s. II 264.
- zwei schwarze Querstreifen**, in Höhe des Mundes, bei *Tlauizcalpantecutli*, dem Regenten der ersten Venusperiode. II 139.
- zwei schwarze Skelette**, bedeuten die Seele des toten *Quetzalcouatl*. II 7, 8 — s. zwei Windgottsschlangen.
- zwei Speere**, in der Hand der *Tlaçolteotl* des Westens und Südens. II 81.
- zwei Speerspitzen**, im Begleitbilde *yaoyotl* des *Tonalamatl*'s. I 32.
- zwei Spindeln**, im Kopfputze der *Tlaçolteotl* (s. *mamalaca-quetzallo*). I 163, 275; II 202 — in einer Schale, unter der *Xochiquetzal* der siebenten Nachtstunde. II 194.
- zwei Spitzen**, über dem Gesichte von neun Köpfen von Abbildern des Morgensternes emporragend. II 72.
- zwei Steinmesser**, federartig geschwungen, am Hinterkopfe der fünf *Auideteó*. II 98.
- zwei Streifen**, auf der Backe; Gesichtsbemalung der *Chalchiuhtlicue*. I 100, 141, 338; II 31, 149 — bei *Tlaloc*. I 111, 141 — bei der *Tzapotlan tenan*. I 100 — bei den Pulquegöttern. I 141 — bei *Tlaçolteotl*. I 164 — s. *ome quipillo*. — kurz und schwarz, auf dem Gesichte der *Mayaueh*. II 84 — der *Tlaçolteotl* der Mitte. II 84 — breit und gelb, quer über das Gesicht verlaufend, Charakteristikum *Tezcattlipoca*'s. I 152 — bei *Uitzilopochtli*. I 152 — s. *ixtlan tlallaan*, s. *piñechiualli*. — dünn, roth und quer, im Gesichte (Augenhöhe) der *Chantico*. II 276 — schwarz, quer im Gesichte, Bemalung *Xiuhcicutli*'s s. *ixtlan tlallaan*. — s. *Xiuhcicutli*.
- zweihundertfünfzigjährige Periode**. I 342, 343, 347; II 137 — von den vier alten Weisen in *Tamoanchan* geschaffen. I 185 — s. *Xippoualli*, *xinhamatl*. — bei ihrem Beginne neues Feuer erbohrt. II 131 — s. *Panquetzaliztli*. — massgebend für sie ist *Tezcattlipoca*. I 117 — verbunden mit *Quetzalcouatl* und *Tezcattlipoca* (im Codex Borbonicus). II 169 — Darstellung mit einem Drehungssinne entgegengesetzt der Bewegung des Uhrzeigers. I 327 — nach den vier Himmelsrichtungen angeordnet. I 343.
- zweihundertfünfzig Kolumnen** des in fünfgliedrige Säulen geordneten *Tonalamatl*'s, ihre augurische Bedeutung. I 18–75.
- zweihundvierzig (42) Jahre**, Abstand eines Jahres *nauí calli* „vier Haus“ von *ce acatl* „eins Rohr“. II 124.
- zwei verschlungene Edelsteinbänder**, blau und grün, Basalstück des Feuerbohrers beim West-Feuerreißer. II 118.
- zwei Wege**, nach dem Hauptraume des Nordens der Unterwelt führend, auf ihnen wandelt je ein zum Leben und Tode bestimmter *Quetzalcouatl*. II 49, 50.
- zwei Windgottsschlangen**, in einander verschlungen. II 3, 4, 6, 7 — s. zwei schwarze Skelette.
- zweiter Himmel**, von *Tlaltecutli* bewohnt. II 292, 294.
- Zwerge**, bei Sonnenfinsterniss der Sonne geopfert. I 194, 208 — Palastsklaven der Fürsten. I 193 — s. Bucklige. — s.

- Xolotl*. — s. Albinos. — im Dienste der *Xochiquetzal*. I 209; II 280.
- Zwielicht**. II 62 — s. Dämmerung.
- Zwilling**, kostbarer = *quetzalcoatl*. I 198; II 187.
- Zwillinge**, s. *couatl*, s. *xolotl*. — von der *Xochiquetzal* geboren; bezeichnen die vierte Nachtstunde und den Westen. II 186—187 — Hinweis auf die alte Göttin (?). I 31 — s. *Ciuacouatl*. (I 32) — Göttin, die solche gebären soll. I 31 — die solche geboren hat. I 209 (s. *Xochiquetzal*) — etwas Widernatürliches. I 193 — einer der Zwillinge getötet I 193.
- Zwillingsbildung**, s. Zweiheit.
- Zwillingsbrüder**, in der Qu'iche-Sage *Hunahpu* und *Xbalanque*. II 1.
- Zwillingsnatur** *Xolotl's*, ihr Ursprung durch die Verwandlung *Xolotl's* in *Nanauatzin* erklärt. I 198, 199.
- zwölf** Tage, Dauer der Unsichtbarkeit des Planeten Venus während der unteren Konjunktion im Codex Borgia. II 16, 58 — s. *chicuacen calli-macuilli quauhtli*.
- zwölf Ciuateteô**, in Tanzstellung, bei dem Ende der Sichtbarkeit des Planeten Venus als Abendstern dargestellt. II 45, 46.
- zwölf Götterpaare**, mit dem Zeichen *tlapoyaua* und dem Monde (s. dort) verbunden. II 178 — bezeichnen zusammen mit dem dreizehnten Götterpaare die dreizehn Tagstunden. II 180 — mit dem Zeichen der Sonne verbunden (s. halbe Sonne). II 178.
- zwölf synodische Monate**, zwischen Mond- und Sonnengott dargestellt. II 228.
- zwölfter Himmel**, von *Tlauizcalpantecutli* bewohnt. II 294.
- Zyklus** = zweiundfünfzigjährige Periode. — in ihrem Zentrum stehen *Tezcatlipoca* und *Quetzalcoatl* gegenüber *Oxomoco* und *Cipactonal*. I 147 — des Planeten Venus = 13×5 Venusperioden. I 263.

[The Book of Chilam Balam of Chumayel Maya Text free pdf e-book](#)

[The Book of Chilam Balam of Chumayel](#)

The Book of Chilam of Chumayel by Ralph L. Roys was published in 1933. The Books of Chilam Balam are the sacred books of the Maya of Yucatan and were named after their last and greatest prophet. Chilam, or chilam, was his title, meaning he was the mouthpiece or interpreter of the gods. Balam means jaguar, but it is also a common family name in Yucatan, so the title of the present work could well be translated as the Book of the Prophet Balam. During a large part of the colonial period, and even down into the Nineteenth Century, many of the towns and villages of northern Yucatan possessed Books of Chilam Balam, and this designation was supplemented by the name of the town to which the book belonged. Download the free ebook here:

What is The Book of Chilam Balam of Chumayel about?

The Book of Chilam Balam of Chumayel is one of the surviving texts from the Maya civilisation in present-day Mexico, primarily written during the late Postclassic period of Maya history (circa 1300-1697). The “Books of Chilam Balam” are a collection of nine related manuscripts, with the Chumayel being one of the most studied and notable.

Yucatec Maya authors wrote the Chilam Balam texts after the Spanish Conquest, and they contain a mix of mythology, prophecy, history, and herbal medicine. The name “Chilam Balam” translates to “Jaguar Shaman” or “Priest,” and is associated with the ancient tradition of prophecy among the Maya.

Here are key elements that the Book of Chilam Balam of Chumayel, like others in the series, typically encompasses:

Historical Chronicles: These sections often relate the history of the Maya people from their early migrations to the Yucatan up to the times during and after the Spanish Conquest. It reflects the turmoil and changes that came with colonization, including the introduction of Christianity.

Prophecies: The books are perhaps best known for their prophetic aspects. The Chilam Balam texts include predictions about the Maya people’s future and the Spaniards’ coming, often written in a symbolic and poetic style. These prophecies, sometimes written as if made before the events occurred, often merge pre-Columbian religious beliefs with Christian elements.

Rituals and Ceremonies: Detailed descriptions of certain Maya rituals and religious practices are also included. These give insight into the post-conquest fusion of Christian and traditional Maya religious practices.

Astronomical and Astrological Texts: The Maya were accomplished astronomers, and the Chilam Balam books continue this tradition by including various charts and tables, often of an astrological nature, predicting the fate of the community based on the movements of celestial bodies.

Medicinal Recipes and Folk Remedies: The texts include a variety of medical knowledge, listing herbal remedies, and traditional practices for treating various ailments.

Transliteration of European Events and Practices: Some parts of the texts involve transliterations of Spanish or Christian terms, events (such as Christian religious stories), and calendars, reflecting the

complex cultural synthesis that occurred in the centuries following the conquest.

The original text is in Yucatec Maya, written using the Latin script taught by Spanish missionaries. The Book of Chilam Balam of Chumayel, like the other books of Chilam Balam, represents a critical source for understanding pre-Columbian Americas, offering a unique perspective on the synthesis of Spanish and Maya cultures and the resilience of Maya civilization and thought despite the profound disruptions of the colonial period.

A manuscript illustration of brown and green fish with wings amidst a swirling turquoise water backdrop.

An Encyclopedia of 16th-Century Indigenous Mexico

Learn the history

The Digital Florentine Codex gives access to a singular manuscript created by Franciscan friar Bernardino de Sahagún and a group of Nahua elders, authors, and artists. Written in parallel columns of Nahuatl and Spanish texts and hand painted with nearly 2,500 images, the encyclopedic codex is widely regarded as the most reliable source of information about Mexica culture, the Aztec Empire, and the conquest of Mexico. Upon completion in 1577 at the Imperial Colegio de la Santa Cruz in Tlatelolco (today Mexico City), the manuscript was sent to Europe where it entered the Medici family's library in Florence—thus, the Florentine Codex. This digital edition unlocks the manuscript's content by making the texts and images searchable.

Spanish Transcription

(López Austin & García Quintana 2000)

Libro primero en que se trata de los dioses que adoraban los naturales desta tierra que es la Nueva España
Capítulo I que habla del principal dios que adoraban y a quien sacrificaban los mexicanos, llamado
Huitzilopuchtli

Este dios llamado Huiztilopuchtli fue otro Hércules, el cual fue robustísimo, de grandes fuerzas y muy belicoso, gran destruidor de pueblos y matador de gentes. En las guerras era como fuego vivo, muy temeroso a sus contrarios, y así la divisa que traía era una cabeza de dragón muy espantable que echaba fuego por la boca. También éste era nigromántico o embaidor, que se transformaba en figura de diversas aves y bestias.

A este hombre por su fortaleza y destreza en la guerra le tuvieron en mucho los mexicanos cuando vivía, después que murió le honraron como a Dios y le ofrecían esclavos, sacrificándolos en su presencia. Buscaban que estos esclavos fuesen muy regalados y muy bien ataviados con aquellos aderezos que ellos usaban de orejeras y barbotes. Esto hacían por más honrarle.

Otro semejante a éste hubo en las partes de Tlaxcalla, que se llamaba Camaxtle.

Capítulo II que trata del dios llamado Páinal, el cual, siendo hombre, era adorado por dios
Este dios llamado Páinal era como sota capitán del arriba dicho, porque el arriba dicho, como mayor capitán, dictaba cuándo se había de hacer guer[ra]

Spanish-to-English Translation

(García Garagarza 2023)

First book, which deals with the gods that the natives of this land, which is the New Spain, worshiped
First chapter, which tells of the main god, named Huitzilopochtli, whom the Mexicans worshiped and to whom they offered sacrifices

This god named Huiztilopochtli was another Hercules who was extraordinarily robust, of great strength, and very bellicose, a great destroyer of towns and slayer of peoples. In war, he was like a living fire, very frightful to his opponents; thus, the emblem that he carried was a very frightening dragon's head that spewed fire through its mouth. He was also a sorcerer or trickster, who transformed himself into the shapes of various birds and beasts.

Because of his fortitude and skill in warfare, the Mexicans held this man in high esteem while he was alive, and after he died, they worshiped him as a god and offered slaves to him, whom they sacrificed in his presence. They took care that these slaves should receive many gifts and be very well attired, with those ear pendants and lip-plug adornments that they used [to wear]. They did this to pay him the highest honors.

There was another [god] similar to this one in the area of Tlaxcala, whose name was Camaxtle.

Second chapter, which tells of the god named Painal, who, although he was a man, was worshiped as a god
This god named Painal was like the subcaptain of the one mentioned above, because that one, as the main captain, dictated the time when war was to be launched

Right Column: Nahuatl

Preface and Acknowledgments

JEANETTE FAVROT PETERSON AND KEVIN TERRACIANO

The Florentine Codex has inspired and catalyzed interdisciplinary scholarship over many decades. It has been scrutinized from multiple perspectives—as an incipient ethnography, a literary work, a dictionary, a historical record, and a theological reflection—and found to be all of these and more. Created by the Franciscan friar Bernardino de Sahagún and his indigenous collaborators, the document records two languages, features over two thousand images, and engages a broad range of fundamental questions, including those of authorship, literacy (both verbal and visual), intercultural dialogue, and historical memory. The Florentine Codex occupies a prominent nexus between the pre-Hispanic past and the New Spanish colonial present and, as such, opens up a fertile space to investigate the various epistemic systems that met, intermingled, and clashed in sixteenth-century Mexico. Until recently, studies of the manuscript focused on the very important task of translating and comprehending the bilingual texts. We acknowledge our collective debt to the illustrious scholars who have gone before us and share our appreciation for this magnificent illuminated manuscript. Breaking new ground, the authors in this collection of essays direct their critical analyses to the images of the Florentine Codex: their pictorial sources, their material components, and their correspondence with the accompanying narratives. In resituating the paintings within their textual matrix and a Nahuatl-Christian context, this volume as a whole complicates a Eurocentric understanding of the images and foregrounds the roles and agency of their indigenous makers.

The impetus for this volume began with a two-day conference, “Visual and Textual Dialogues in Colonial Mexico and Europe: The Florentine Codex,” held in 2015 at the University of California, Los Angeles, and the Getty Center. The meeting convened a group of scholars from Mexico, Europe, and the United States to examine the interrelation of the manuscript’s three “texts”: the Nahuatl and Spanish alphabetic texts and the hand-painted images. Taken together, both words and pictures offer a rich body of evidence for interdisciplinary investigation, as well as a springboard for larger questions. The conference was followed six months later by an informal workshop held at the Getty Research Institute. The dialogue generated by this workshop highlighted the need for a publication dedicated to our new interpretative perspective on the Florentine Codex. We are grateful for the participation of the invited scholars, whose thought-provoking papers were subsequently expanded and refined into the essays found in this volume. Additionally, we acknowledge the contributions of the discussants at the 2015 conference, Kim Richter, Cecelia F. Klein, and Daniela Bleichmar.

For so generously hosting and facilitating these meetings, the editors would like to express their special thanks to Barbara Fuchs, then director of the Center for Seventeenth- and Eighteenth-Century Studies and the UCLA William Andrews Clark Memorial Library, and to Thomas W. Gaehtgens and Kim Richter, then director and associate director of the Getty Research Institute at the Getty Center. We also acknowledge the assistance of Sue Kang, Nathaniel Deines, Sally McKay, Lisa Cam-

bier, and Mahsa Hatam at the Getty, and Jeanette LaVere, Kathy Sanchez, and Erich Bollman at UCLA. We are grateful to other research centers at UCLA that cosponsored the conference: the Center for Medieval and Renaissance Studies, the Center for Mexican Studies, and the Latin American Institute.

We owe a great debt to the warm reception and cooperation of the Biblioteca Medicea Laurenziana, where the Florentine Codex is housed. Ida Giovanna Rao, the director of the library until December of 2017, made the original three-volume Florentine Codex accessible for research and waived the costs of publishing its images. Our thanks also to Anna Rita Fantoni, the Laurenziana's current director, for supporting this generous arrangement, and to the Getty Research Institute for allowing us to incorporate into this volume both images and related text from their superb digital copy of the Florentine Codex.

We thank Christopher DiMatteo for his expert translation of Italian in chapter 2, and Rebecca Dufendach for collating and editing our bibliography. We are grateful to Helen Deutsch, current director of the UCLA Center for Seventeenth- and Eighteenth-Century Studies and the Clark Library, for cosponsoring this publication with a generous subvention, and to the UCLA Latin American Institute for the same. We are especially grateful to

Kerry E. Webb, senior acquisitions editor, and the staff at the University of Texas Press.

Note to readers: The editors acknowledge that the alphabetic spelling of some Nahuatl words can vary from one scholar and one chapter to the next. As one example, the name of the Aztec ruler at the time of the conquest can be spelled Moctezuma, Moteuczoma, or Motecuhzoma. Recognizing the complexity of the cultural terms "Aztec" and "Nahua," in this volume the name Aztec is generally applied to precontact peoples who flourished in central Mexico and, by conquest or negotiation, received tribute from many communities of Mesoamerica. Specifically, those who lived in the island cities on Lake Texcoco, Mexico-Tenochtitlan, and Tlatelolco, were also referred to as the Mexica. More current is our use of the term Nahuas for those peoples who spoke, and continue to speak, the language of Nahuatl. On the pagination of the Florentine Codex, we have followed throughout the folio numbers internally sequential within each book, found in the upper right-hand corner (recto and verso). The exception to this practice is in the pagination of the first twelve folios of Book 1, in which the only page numbers are those for volume 1 found in the lower right-hand corner of each folio (recto and verso).

THE

Introduction

An Encyclopedia of Nahua Culture: Context and Content

KEVIN TERRACIANO

It is difficult to imagine the sense of urgency that fray Bernardino de Sahagún and his team of indigenous writers and artists felt as they struggled to complete the final draft of their encyclopedia of Nahua culture and language known today as the Florentine Codex. They worked inside the cloistered walls of the Colegio de Santa Cruz in Santiago Tlatelolco while family, friends, and some of their own group succumbed to disease. Writing during the virulent epidemic of 1576, Sahagún recalled an earlier plague of 1545, when he claimed to have buried more than ten thousand corpses before he himself fell ill and nearly died. “There is hardly anyone still in the college,” he lamented. “Dead and sick, almost all are gone.”¹ Sahagún blamed the two epidemics for the decline of the *colegio*.

The Franciscan *colegio* in Tlatelolco, a Mexico community just north of neighboring Tenochtitlan and on the same island in the lake of the Basin of Mexico, was the first European college in the Americas. The Holy Cross College was founded on January 6, 1536, to educate Nahua youth, primarily but not exclusively the sons of Nahua elites. The Franciscans offered a basic humanities curriculum, teaching the neophytes how to read and write in Nahuatl, Spanish, and Latin; the trivium and the quadrivium; and elements of the Christian doctrine. The college possessed an extensive library to support these endeavors. By the second half of the sixteenth century, Tlatelolco had become a center of Franciscan learning and humanist education in New Spain.

But by the 1570s, Sahagún had seen the “whole land . . . depleted of people” with his very own eyes.² He feared that the Indians were destined for extinction, to be replaced forever by Spaniards and their descendants.³ A striking image in Book 12 of the Florentine Codex depicts victims of the first outbreak of smallpox, after the Spaniards were expelled from Tenochtitlan in 1520 (fig. I.1). A woman attends to the sick, who lie suffering on *petates*, or reed mats. The Nahuatl text says that the epidemic lasted a full sixty days before it moved toward the south, and “the Mexica warriors were greatly weakened by it.”⁴

The epidemic of 1576 struck in August; Sahagún penned the prologues and interpolations in November of that year. To describe the devastation wrought by war and disease on the indigenous peoples of New Spain, he recalled the words of an Old Testament prophecy. In the prologue to Book 1 he compares the war of 1520–1521 to

the curse which Jeremiah, in the name of God, thundered upon Judea and Jerusalem in the fifth chapter, saying: “I will cause to come upon you, I will bring against you a people from afar, a very vigorous and brave people, a very ancient people skilled in battle, a people whose language you will not understand, . . . all powerful and courageous people, lusting to kill. This people will destroy you and your women and children and everything you possess, and will destroy all your villages and buildings.” This has literally happened to these Indians by way of the Spaniards.⁵

The Florentine Codex took shape amid the chaos of conquest, disease, and consolidation of imperial power in Mexico, the culmination of decades of meticulous gathering and recording of knowledge about Nahua culture. As soon as the bilingual manuscript was completed, the final version in a series of works collectively referred to as the *Historia general* (or *universal*), it was whisked away to Spain. In March 1578, Sahagún wrote a letter to the Spanish king, humbly inquiring whether his majesty had seen the books that had taken three decades to complete.⁶ By this time, fray Bernardino was approaching eighty years of age and wrote with a trembling hand. He would never know of the work's final destination or fate. Table I.1 provides a timeline for the manuscript's production.

THE MANUSCRIPT

This volume presents studies generated by our 2015 conference on the Florentine Codex that address issues raised by the internal dynamics of the manuscript, its “three texts,” and their external implications. The questions we initially explored, and herein pursue in writing, we hope will promote greater understanding of the relationship of the bilingual texts to the relevant imagery, with an emphasis on the methods, potential models, and intent of its multiple authors. This introductory chapter locates the production of the Florentine Codex in its historical, literary, and artistic framework and summarizes the thirteen substantive contributions to this volume.

At the outset I should clarify the several titles conferred on the Florentine Codex and their inconsistent usage. The “Florentine Codex” is the title that the pioneering historians Francisco del Paso y Troncoso, Joaquín García Icazbalceta, Arthur Anderson and Charles Dibble, and other prominent scholars have given the manuscript that now exists in the Biblioteca Medicea Laurenziana in Florence, Italy (Med. Palat. 218, 219, and 220). The twelve books of the manuscript were originally bound in four volumes;⁷ today the manuscript consists of 1,223 folios (2,446 pages) and is rebound in three volumes.

Ironically, historians do not know the original title of the work; it is unclear what title Sahagún chose. The manuscript preserves only a small fragment of the title page, which was probably removed when it was bound a second time. It is also called the *Historia general de las cosas de Nueva España* and the *Historia universal de las cosas de Nueva España*, based on the titles of a working draft and

a copy of the Spanish text, the Palacio Real and Tolosa manuscripts, respectively, both in Madrid.⁸ Many scholars have also adopted the *Historia general* title, including Carlos María de Bustamante, Paso y Troncoso, and Anderson and Dibble, both for Sahagún's larger project (1558–1577) and explicitly for the final edition. In 1829–1830, Bustamante published the Spanish translation of the codex as the *Historia general de las cosas de Nueva España*. It is based on the Tolosa manuscript, which in general is a faithful copy of the Florentine's Spanish text.⁹ In the prologues to each of the twelve books, Sahagún seems to avoid a title, referring to the work numerous times as the *libros* (books) or the *doze libros* (twelve books) or the *obra* (work). He also uses the title *historia* more than once, in the prologues to Books 9 and 10 and in his letter to the king in 1578, mentioned before. The broader meaning of the word *historia* in the early modern period did not refer exclusively to an account of past events; the term was often modified with other descriptive terms, such as *natural* (i.e., flora and fauna) or *moral* (mores) to indicate broader studies of nature or customs.¹⁰ The qualifying term *general* implies the treatment of a wide range of subjects, and *universal* suggests an attempt to insert the Nahuas into a universal Christian history. Jesús Bustamante García observes that the archbishop of Mexico, Pedro Moya de Contreras, referred to the work as Sahagún's “*Historia universal de las Yndias*” in his letter to the king, dated December 16, 1578.¹¹ Victoria Ríos Castaño provides evidence that *universal* was the term recognized by King Philip II and the Council of the Indies. She also points out that the choice of twelve books conforms to the symbolic import of the number twelve to the friars and to Christian ideology in general.¹² Sahagún also refers to having written “twelve books of the divine, or rather idolatrous, human, and natural things of this New Spain.”¹³ Thus he refers to his entire encyclopedic project with many of the key words that were later applied to it: “*Historia general de las cosas de Nueva España*.”

THE IMPERIAL ARCHIVE

Despite many dramatic postconquest changes, the Nahuatl-speaking peoples who lived around Lake Texcoco in the Basin of Mexico continued to live and work in hundreds of separate, semiautonomous *altepetl* (communities) that survived in altered but recognizable forms.¹⁴ Even the two *altepetl* at the center of the Mexica capital,

TABLE 1.1. *Chronology of the Historia General [Universal] de las Cosas de Nueva España*

DATE	PRODUCTION STAGES
1547	Sahagún first records <i>huehuetlatolli</i> in Nahuatl (later, Bk. 6) in the Colegio de Santa Cruz, Santiago Tlatelolco.
1555	First Nahuatl composition of the conquest narrative (later, Bk. 12), Tlatelolco.
1558	Francisco de Toral, Franciscan provincial, requests Sahagún compile and expand his work on the Nahuatl language and cultural data. Sahagún prepares an outline, or <i>minuta</i> , of planned texts.
1558–1565	Códices Matritenses or Madrid Codices (Tepepulco and Tlatelolco) A collection of Sahagún's Nahuatl writings, bound in two volumes, that reside in two libraries in Madrid, the Real Academia de la Historia and the Palacio Real. These include: 1. Primeros memoriales (1559–1561, Tepepulco) Four sections on gods, heaven and underworld, lordship, human things. Recorded in Nahuatl with images. 2. “Manuscrito de Tlatelolco” (1561–1565, Tlatelolco) a. <i>Segundos memoriales</i> (1561–1562) b. <i>Memoriales en tres columnas</i> (1563–1565) c. <i>Memoriales con escolios</i> (ca. 1565)
1565–1570	San Francisco, Mexico: Sahagún reorders, amends, and annotates texts.
1569	“Manuscrito de 1569” : “clean copy” of twelve books in Nahuatl of <i>Historia general</i> , now lost.
1570–1575	Sahagún's writings impounded and scattered (Tlatelolco).
August 4, 1575	Arrival of Rodrigo de Sequera with orders from Juan de Ovando (d. Aug. 8, 1575), president of Council of the Indies, Seville, to commission Sahagún to produce a bilingual, illustrated copy of his encyclopedic Nahuatl manuscript.
fall 1575–spring 1577	Florentine Codex (Tlatelolco) Production of the final edition of the <i>Historia general</i> commonly known as the Florentine Codex (Biblioteca Medicea Laurenziana, Florence).
April 22, 1577	Royal order (<i>real cédula</i>) to Viceroy Martín Enríquez to seize Sahagún's works.
October 28, 1577	Archbishop Pedro Moya de Contreras writes to Philip II to confirm that Sahagún's works have been sequestered and will be sent to the king. On December 16, 1578, the archbishop confirms the shipment, as does Sahagún in an earlier letter of March 26, 1578.
1580	Florentine Codex has reached Spain by this time, brought by fray Rodrigo de Sequera. It is taken shortly thereafter to Rome, perhaps as a diplomatic gift for Cardinal Ferdinando I de' Medici (1563–1588).
1578–1588	Tolosa manuscript (ms. 9-4812, Real Academia de la Historia, Madrid) First copy of Spanish text in the Florentine Codex, made in Mexico or Spain.
1587 or 1588	Florentine Codex in Medici collection moved to Florence when Ferdinando I de' Medici made grand duke of Tuscany.
1783	First recorded entry of the Florentine Codex in the Biblioteca Medicea Laurenziana (Med. Palat. 218–220).

Note: All documents were initiated and overseen by Sahagún but were multiauthored, with indigenous Nahua scholars and painters transcribing the information from oral Nahuatl to alphabetic script, creating the accompanying images, and often revising texts.

Sources: Anderson 1982; Dibble 1982a; Sahagún 1979, Bk. 6, fol. 215v; Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 46–47, 51; D'Oliver and Cline 1973, 188–203; Baudot 1995, 496–502; Marchetti 1983, 22; Bustamante García 1990, 307–308, 327–346, 451; León-Portilla 2002a, 115–224; Rao 2011, 38–39; Ríos Castaño 2014, 99–109.

Tenochtitlan and Tlatelolco, which bore the brunt of the Spanish-led invasion in 1520–1521, managed to regroup and reassert their identities within the new colonial order. Nonetheless, their leaders and inhabitants were forced to come to terms with new political and religious authorities who spoke a foreign language, introduced another legal system, and promoted a rapidly changing economy in which the competition for natural and human resources, especially at the center of this “New Spain,” intensified with each generation.

At the same time, the Crown sought to impose its sovereignty on the distant land. Carlos V brought the chaotic early period of Cortés, and his successor, Nuño Beltrán de Guzmán, president of the first *audiencia*, or high court, to a close by appointing a second *audiencia* of judges loyal to the Crown and a new viceroy, don Antonio de Mendoza, who governed from 1535 to 1550. Viceroy Mendoza consolidated the Crown’s authority and supported the efforts of the mendicant orders to establish the Church.¹⁵ In this early period of violent *entradas* (expeditions) and Indian slaving, fray Bartolomé de las Casas and other critics of empire exposed the hypocrisy of the concept of “just war” and lamented the rapidly declining native population. The New Laws of 1542 represented the Crown’s attempt to assert its authority throughout Spanish America by reigning in conquistadores, outlawing indigenous slavery in so-called pacified areas, and abolishing the *encomienda* (royal grant of indigenous labor and tribute to a Spaniard). Although the New Laws were not carried out fully anywhere, rebellious movements and the discovery of rich silver deposits in the viceroyalties of New Spain and Peru stiffened the Crown’s resolve to assert control over the Indies, as the Holy Roman Empire continued to expand.

The Florentine Codex is unique in its scope and reliance on Nahua collaborators, but it nevertheless falls within the parameters of the early modern European quest for collecting information on newly conquered territories and their people. Spain’s overseas ventures generated a staggering amount of information, contributing to the creation of an imperial archive. Leaders of expeditions were among the first to report, using the genre of the *relación*, or account. Hernando Cortés wrote the first *cartas de relación* from Mexico, sending his letters directly to the king beginning in 1519. Early *relaciones* and *crónicas* (chronicles), written by both secular and ecclesiastical officials, brimmed with cultural detail about the people of the new lands, the *indios*. The first royal chronicler of the

Indies, Gonzalo Fernández de Oviedo y Valdés, stationed on the island of Española, in Santo Domingo, interviewed Spaniards returning to Spain for the first part of his lengthy history, *Historia general y natural de las Indias*, published in Seville in 1535.

Fray Toribio de Benavente, one of the original twelve Franciscans to arrive in New Spain in 1524, who adopted the name Motolinía (Nahuatl for “he is poor, afflicted”), completed his *Historia de los indios de la Nueva España* in 1541, within two decades of his arrival, but it was not published until the nineteenth century.¹⁶ Motolinía consulted many Nahuas and was one of the first Spaniards to realize how Nahuas kept written records of their histories, using a pictorial system that he compared to Egyptian hieroglyphs. Francisco López de Gómara, author of the first history of the conquest of Mexico (after Cortés’s letters), published in 1552, copied entire sections of Motolinía’s manuscript on indigenous customs into his own work.¹⁷

Native artists in the early postconquest period contributed directly to many manuscripts by providing information and producing images. Nahua *tlacuiloque* (plural of *tlacuilo*, writer/painter) learned how to write their languages with the Roman alphabet; many culture groups in Mesoamerica had developed traditions of writing on stone, fig-bark paper (*amatl*), deerskin, and cloth with natural pigments long before the Spaniards arrived. The eleventh book of the Florentine Codex features twelve pages on colors or pigments used for writing/painting. Figure 1.2 is a folio from chapter 11, which shows two *tlacuiloque* working while assistants prepare pigments of different colors. Ironically, the images in this second part of Book 11 contain no colors; the artists seem to have run out of pigments by this latter part of the project, after painting hundreds of images throughout most of the manuscript.

One of the first compilations to feature indigenous images and Spanish text was the Codex Mendoza. Produced during Viceroy Mendoza’s term of office (1535–1550), little is known about the origins of this manuscript, for it contains no title page or prologue. One potential scenario is that an indigenous group in Mexico City, perhaps in collaboration with friars, created a pictorial manuscript that portrays Tenochtitlan and Mexica society in a positive light and then approached Spanish authorities to have it translated and sent to the king. The Codex Mendoza consists of three parts: (1) a history of Mexica dynastic leaders and their conquests; (2) a long list of tribute that *altepetl* subject to the Mexica empire sent to Tenochtitlan;

and (3) a series of scenes describing the birth, life, and death of Nahua people. The *tlacuiloque* designed and executed seventy-two pages of finely painted images. The artists then explained the meaning of the images to a translator, who wrote explanatory Spanish glosses alongside the paintings. The resulting narrative juxtaposes images, language, and a wealth of information on Mexica culture.¹⁸ But it is unclear whether Viceroy Mendoza commissioned or even saw the manuscript.

More certain is Mendoza's sponsorship of the 1541 *Relación de Michoacán*, a book that was written by a Franciscan based on interviews with indigenous informants and illustrated by indigenous artists. Its tripartite structure resembles the Codex Mendoza, but its purpose was to help resolve territorial disputes in and around Tzintzuntzan.¹⁹ By the 1540s, indigenous writers throughout highland Mesoamerica were producing many different types of pictorial manuscripts to support claims within the Spanish justice system, attempting to show proof of possession and hereditary authority for judges in the form of maps and lists of rulers. In fact, Viceroy Mendoza had ruled in favor of allowing pictorial claims as evidence in lawsuits.²⁰ Indigenous artists used images to document everything from land claims to abuses of authority. The Codex Tepetlaoztoc (or Kingsborough) and the Codex Osuna, for example, were produced for legal disputes in the 1550s and 1560s.

In this early postconquest period, Franciscans played a leading role among the mendicant orders in working closely with indigenous men to record their languages for evangelical purposes, creating *vocabularios* (translation dictionaries), *artes* (grammar texts), *doctrinas* (doctrinal texts explaining Christian concepts), and *confesionarios* (confessional manuals)—all in native languages, with or without Spanish translations. Many of these works were among the first books published in the Americas. Fray Alonso de Molina, who worked and taught alongside Sahagún in the Colegio de Santa Cruz, published the first Spanish-to-Nahuatl *vocabulario* in 1555, and then added a Nahuatl-to-Spanish complement in 1571, creating the first two-way dictionary of an indigenous language of the Americas. Obviously, Molina could not have done this without the assistance of many Nahuas who were fluent in Spanish. In spite of the indispensable contribution of bilingual indigenous scholars, the title pages of these works consistently refer to the friars as the sole authors, even when indigenous contributions are acknowledged in the prologues to

the works. In the making of the Florentine Codex, Bernardino de Sahagún shared these collaborative working practices, but to his credit he included the names of some of his Nahua coauthors in his prologues and interpolations.

A UNIQUE COLLABORATIVE PROJECT

Fray Bernardino de Sahagún was born around 1499 or 1500 in the ancient town of Sahagún, in the kingdom of León. He took his vows and assumed the habit of the Franciscan order in Salamanca, where he likely also attended the University of Salamanca.²¹ He arrived in New Spain in 1529 and established a reputation for learning Nahuatl.²² By the 1540s, he embarked on a series of projects that stand out for their originality and sheer ambition, summarized in table I.1. For example, he collected dozens of Nahuatl speeches in 1547 and recorded a Nahuatl version of the conquest of Mexico in 1555. In 1558, the Franciscan provincial, fray Francisco de Toral, commissioned Sahagún to compile a study of indigenous culture that would be useful to the religious who sought to indoctrinate neophytes in the Christian faith. To this end, Sahagún took four Nahua scholars whom he had taught at the Colegio de Santa Cruz in Tlatelolco to the Franciscan convent in Tepepulco, an *altepetl* located about eighty kilometers northeast of Mexico City and the probable source of the Nahuatl speeches that he had collected earlier. The four scholars were Antonio Valeriano of Azcapotzalco, Martín Jacobita of Tlatelolco, and Pedro de San Buenaventura and Alonso Vegerano of Cuauhtitlan. In Tepepulco Sahagún and his team consulted with elders and leaders, who used images as mnemonic devices to elicit oral recitations and responses, in the manner that preconquest-style codices were used to guide a narrative. The Nahuatl scholars wrote down the responses prompted by the images. Sahagún also compiled word lists for various topics that were explained later, focusing on the lexicon associated with each topic.²³

By 1561, Sahagún and his team produced a manuscript known today as the *Primeros memoriales*, considered a precursor to the Florentine Codex in its thematic structure and its reliance on a strong pictorial component. Its four chapters consist of eighty-eight folios, or 176 pages; more than half of the pages contain illustrations. The *Primeros memoriales* follows a pattern detected in other encyclopedic manuscripts that organize their material from the celestial to the more earthbound realms, discussed more

fully later. The first chapter, titled “Teteo,” addresses the deities and their associated rituals; the second, “Ilhuicayotl iuan Mictlancayotl,” treats matters related to the heavens and the place of the dead; the third, “Tlatocayotl,” deals with rulers; and the fourth chapter, “Tlacayotl,” considers a variety of human affairs.²⁴ Images serve a primary function in the *Primeros memoriales*, as in the Codex Mendoza, guiding the content of the alphabetic text. Unlike the Mendoza glosses, which are in Spanish, in the *Primeros memoriales* Nahuas wrote explanations or transmitted information in Nahuatl.

In 1561 Sahagún returned to the Colegio de Santa Cruz in Santiago Tlatelolco, where he applied the methods he had developed in Tepepulco, meeting with leaders there to request support for his grander project. In the prologue to Book 2 of the Florentine Codex, Sahagún recounts how in Tlatelolco “[t]he governor with his councilmen assigned me as many as eight or ten leaders, selected from among all, very capable in their language, and in their ancient customs.”²⁵ These men, and four or five of his most able trilingual students from the Colegio de Santa Cruz, “amended, explained, and expanded” what was collected in Tepepulco. The resulting drafts from this period are known as the “Manuscrito de Tlatelolco.” In 1565 Sahagún returned to the convent of San Francisco in Mexico City to work alone for three years, where he “examined and reexamined” all his writings. He writes in the prologue to Book 2 that he “divided them into books, into twelve books, and some books by chapters and paragraphs.” He included material already gathered on rhetoric (1547) and the conquest (1555), which became Books 6 and 12 of the Florentine Codex, respectively. The Franciscan completed this Nahuatl “Manuscrito de 1569” in Mexico City. Nahua students “added and amended many things to the twelve books when they made a clear copy.” However, at this time only the Nahuatl text of the bilingual project was complete.²⁶

In 1570, the merits of Sahagún’s project were discussed at the provincial order chapter meeting in Mexico City. Some members voiced concern with the project, Sahagún recalls, that “it was contrary to the vows of poverty to spend monies in recording those writings.”²⁷ It is likely that the matter involved more than economic considerations. At issue was a heated debate over the role of knowledge about indigenous cultures within the missionary program. Franciscans were divided. Did recognizing and recording indigenous culture, including sacred beliefs

and practices, advance or undermine their goals of converting the native inhabitants to Christianity? In any case, Sahagún was instructed to dismiss his scribes and complete the work alone, despite the “trembling” of his hand in old age. Even worse, the provincial, fray Alonso de Escalona, confiscated and scattered the books by sending them to friars throughout the province for their perusal.

The tide turned five years later, however, and Sahagún eventually retrieved the books with the assistance of the commissary fray Miguel Navarro. In 1575, the commissary general fray Rodrigo de Sequera ordered the Nahuatl manuscript to be translated into Spanish, authorizing the project’s continuation. Sequera intended to send it to the president of the Council of the Indies, don Juan de Ovando.²⁸ Ovando had become president in 1571, advising the king on policy regarding the Indies and building a corpus of data for the imperial archive.²⁹ His interests ranged from geography and natural resources to the customs and history of indigenous peoples. Ovando began to develop questionnaires to be circulated throughout the Spanish empire, ultimately the basis of the *Relaciones geográficas* that were sent to New Spain in 1576. In 1573 King Philip II issued a decree to compile a *historia*, a book of *descripciones*, a type of encyclopedia on the history of the Indies and its people, the type of manuscript on which Sahagún and his team had been working.³⁰ Ovando created the position of *cosmógrafo-cronista* to write the official history and geography of the Indies, and he sent out scientific expeditions, including that of Francisco Hernández, the *protomédico* who collected a vast array of botanical and medicinal information in Mexico. When Ovando heard of Sahagún’s work he asked to see the books, and Sequera intended to send them to him, but Ovando died in 1575. In 1576, the archbishop of Mexico, Pedro Moya de Contreras, entered the conversation, urging Sequera to have the books translated into Spanish and to send them to the king.³¹

Meanwhile, Sahagún prepared Spanish summaries of the Nahuatl text in what would become the final edition of the *Historia general*, or the Florentine Codex. He focused on translating the manuscript and writing the prologues in 1576 and 1577. The prologues refer to current events of that period, including the epidemic of 1576, discussed before. Artists also added the hundreds of images in these two years, most painted in polychrome tones. Only the images in the second half of Book 11 and in Books 6 and 12 lack color (with a few exceptions), suggesting that these

were the final books being illustrated when the color pigments ran out; or that their preparation could not keep up with the scribes' hurried pace to complete the manuscript; or that the epidemic of 1576–1577 affected the availability of pigments and manpower to complete its production, or some combination of these factors.³²

Everyone was forced to work faster to meet a new deadline when the Crown altered its position on manuscripts involving indigenous history and religion and issued royal cédulas ordering the confiscation of all manuscripts on the topic. In April of 1577, King Philip II issued a decree that concludes:

We order that, as soon as you receive this, our decree, with great care and diligence you take measures to get these books without there remaining the originals or copies of them, and to send them well guarded at once to our Council of the Indies, that they may there be examined. And you will be advised not to permit anyone, for any reason, in any language, to write concerning the superstitions and way of life these Indians had.³³

The decree suggests a shift in policy from encouraging the collection of information on indigenous culture and history to prohibiting writing on those topics. Moreover, the decree authorized the confiscation of all manuscripts and related materials on these controversial topics. The Council of Trent's decrees (1545–1563) to condemn false doctrines and idolatries and the presence of the Holy Office of the Inquisition, established in New Spain in 1571, might have influenced the Crown's decision. This cédula and its enforcement expedited Sahagún's plan to send the books to Spain. Sahagún wrote a letter to Philip II in March 1578, averring that he had sent a copy of the *Historia general* to the king but had heard nothing of its reception, and that he would copy the manuscript and send it again if it had not reached him (unwittingly suggesting that he had defied the order by keeping a copy of the manuscript). Another reference to this manuscript appears in Sahagún's 1585 version of Book 12, where he claims he gave a first copy to the outgoing viceroy, don Martín Enríquez, and then later gave a second copy to fray Rodrigo de Sequera.³⁴

Since a first so-called Enríquez copy is no longer extant, and it is difficult to believe that Sahagún and his team could produce two major manuscripts within a couple of years, the only certainty is that Sahagún entrusted a complete version with images to Sequera, who departed

Mexico for Spain in 1580.³⁵ This "Sequera manuscript," dedicated to the supportive commissary general, is the Florentine Codex. Sahagún called the books of this copy "muy historiados" (profusely illustrated).³⁶

Although the fate of the Sequera manuscript once it reached Spain is equally unclear, it likely arrived in Rome, where Ferdinando I de' Medici acquired the manuscript, by gift or purchase, from Sequera.³⁷ Giovanna Rao provides new evidence indicating that Ferdinando possessed the manuscript before he became Grand Duke of Tuscany in 1588. She concludes that Sequera probably thought that the codex was more likely to survive if it were entrusted to the grand duke, who sought to augment the collection of international manuscripts begun by Cosimo the Elder. One fascinating piece of evidence that the codex had reached Florence by 1588–1589 comes from the depiction of Mexica warriors on the ceiling of the former Armeria (room 21) of the Uffizi Gallery, originally a Medici palace. The greatest affinity between the Florentine Codex and the Uffizi murals is found in the portrayal of a heroic Mexica warrior, Tzilacatzin, who is featured in Book 12 (fol. 60v).³⁸ The artist must have seen the codex before he painted his stylized narrative of the conquest of the Americas. After 1587–1589, the preservation and location of the codex was unknown to all those outside a few people within the Medici circle until 1793, when the bibliographer Angelo Maria Bandini published a catalogue in Latin of manuscripts in the Biblioteca Medicea Laurenziana, designed by Michelangelo. Still, the work was not studied until it was cited again by fray Marcelino de Civezza in 1879, a full three centuries after its journey across the Atlantic Ocean to Tuscany.³⁹

This discussion of the evolution and survival of the Florentine Codex sheds light on the unique qualities of the manuscript. Sahagún deliberates on why and how the work was produced, referring to the obstacles that beset the project and suggesting that he knew the books would continue to attract scrutiny: "[T]his work has been examined and verified by many over many years. It has suffered many travails and misfortunes until it has been put into the form it is now in."⁴⁰ Sahagún's prologues abound with such defensive remarks about the nature of the work, beginning with his opening statement in the first prologue, in which he compares a doctor's remedy to the extirpation of idolatry. Just as a doctor needs to know the symptoms of a sickness in order to apply a cure to the patient, he reasoned, the religious of New Spain needed to be able

to identify idolatry in its many forms in order to destroy it completely. Saving people, whether from disease of the body or the soul, required knowledge.

Considering that Sahagún wrote these prologues last, in 1576 and 1577, in the midst of an epidemic, it is no coincidence that he chose to compare the work of priests with doctors. Many friars, in fact, believed that God was punishing the Indians with disease because of their idolatries. And yet this religious justification was only one aspect of the work. If fray Francisco de Toral commissioned Sahagún to compile a study of indigenous culture that would be useful to the mendicants who sought to indoctrinate them in the Christian faith, Sahagún and his team of Nahuatl writers and artists went far beyond this objective, creating a massive compilation of language and culture that resembles a humanist encyclopedia more than a handbook for extirpation. Indeed, no other manuscript in the Americas can match the Florentine Codex for its wide-ranging coverage of numerous topics (some controversial at the time), its hundreds of carefully painted illustrations, and its record of the indigenous language.

“A TREASURY FOR THE KNOWLEDGE OF MANY THINGS”: MODELS FOR THE MANUSCRIPT

In referring to the type of work that he and his colleagues had sought to produce, Sahagún remarks that many who knew of his project would ask about the *calepino*, in reference to the demonstrative vocabulary of Latin that Ambrosio Calepino (1440–1510/1511) had created.⁴¹ Although Sahagún concluded that it would be impossible to create a *calepino*, considering that there were very few Nahuatl (alphabetic) writings at this time, he thought his project might lay the groundwork for such a work. He interrogated his Nahuatl colleagues for “all manners of speech and all the words that this language uses, as well verified and certain as that which Virgil, Cicero, and other authors wrote in the Latin language.” Sahagún was certain that the compendium would be “a treasury for the knowledge of many things worthy of being known,” and a “thing of much value in New and Old Spain.”⁴² If recording “all manners of speech and all the words” of the language was one of Sahagún’s main concerns, organizing and preserving knowledge on a wide variety of topics regarding Nahuatl culture was another. Aside from the *calepino*, several other works seem to have influenced the objective and method

of the Florentine Codex, including classical and medieval encyclopedias, *historias* (general, universal, natural, moral), Christian treatises, and the many books on sermons and confessions that filled the shelves of the Colegio de Santa Cruz library.

The Florentine Codex is clearly “encyclopedic” in that it attempts to encapsulate the sum of what was then known about the Nahuatl world in a concrete, pictorialized book form. Sahagún’s monumental endeavor fulfills the very definition of the encyclopedia, from the Greek for “general knowledge” (*enkyklios paideia*).⁴³ It is also a work that “encapsulates a total or universal body of knowledge organizing it in order to preserve it and make it accessible.”⁴⁴ The manuscript’s format and its sequence of twelve books conform to the hierarchical organization of classical and medieval compendia, progressing from the realms of the divine (“Gods” and “Ceremonies”) to the human (“The People”) and the natural realms (“Earthly Things”). Only Book 6, “Rhetoric,” and Book 12, “The Conquest,” break with this sequence (for a summary of the organization of the twelve books, see table I.2).

For its overarching structural organization, as well as in some cases specific data, three well-known encyclopedias have been suggested as models (see table I.3): Pliny the Elder’s *Naturalis historia*, found in the Tlatelolco library; the seventh-century *Etymologiae* of Isidore of Seville (580–636); and the thirteenth-century *De proprietatibus rerum* (On the nature of things, 1220–1240) by Bartholomew Anglicus.⁴⁵ Isidore was the first Christian writer to compile a summa of universal knowledge in the *Etymologiae*, also known as *Origines*. The twenty-volume compilation assembled parts of many books from antiquity. Two of these well-known encyclopedists, Pliny and Isidore, also devote considerable attention to language and rhetoric.⁴⁶ Sahagún seems to imitate Pliny in describing his *Historia general* project as a thesaurus, a treasury (*tesoro*), and a coffer (*recámara*) or storehouse.⁴⁷ Anglicus’s influence on Book 6 and especially Book 10 of the Florentine Codex, in its description of the vices and virtues of various Nahuatl types, is well documented.⁴⁸

Several Christian texts influenced Sahagún’s model and the content of the Florentine Codex. Saint Augustine, for one, wrote on the conversion of non-Christian populations and the taxonomy of “pagan” gods. Augustine wrote *De civitate dei* (City of God) to defend Christianity after the sack of Rome by a Gothic army in 410. By the sixteenth century, the work was firmly established in

TABLE 1.2. Organization of the Florentine Codex

BOOK	SHORT TITLE

the canon of Christian texts. Augustine’s intent to compile knowledge on pagan religions in order to expose their false and sinful nature resonates with Sahagún’s objective for compiling the first five books of the Florentine Codex.⁴⁹ Elizabeth Boone and Guilhem Olivier refer to the influence of Augustine in this volume. Ríos Castaño demonstrates the importance of Augustine and shows that several collections of sermons, manuals of confessional practices, and texts on biblical exegesis had a decisive influence on Sahagún’s model and inquisitorial method of collecting information.⁵⁰

Book 11 of the Florentine Codex on the flora and fauna, minerology, and topography of New Spain anticipates other sixteenth- and early seventeenth-century studies of natural history. These include the works of Andrea Cesalpino (*De plantis libri XVI*, published in 1583), Ulisse Androvandi (*De reliquis animalibus* [. . .], 1605), and Francisco Hernández (*Cuatro libros de la naturaleza* [. . .] *de la Nueva España*, 1615), which feature legends and proverbs,

superstitions, and symbols associated with specific animals and plants.⁵¹ In fact, Hernández consulted Sahagún’s manuscript in Tlatelolco.

The range of potential models for the Florentine Codex continues to expand as intriguing new sources are identified, some described in this volume. For example, Boone refers to the work of Albricus, a philosopher who wrote a thirteenth-century treatise (*Liber ymaginum deorum*), as well as new manuals published in the sixteenth century on the description and mythology of the classical gods, which helped frame questionnaires regarding Nahua deities and also impacted the rendering of the gods’ iconography in the Florentine Codex. The Franciscan Johann Boemus published in 1520 a work on peoples and their customs (*Omnium gentium mores, leges et ritus*). Pablo Escalante Gonzalbo observes that Olaus Magnus’s *Historia de gentibus septentrionalibus* (1565) and Johann von Cube’s *Hortus sanitatis* (1536) served as models for several illustrations in the Florentine Codex. Likewise, in her recent study on

the conquest of Mexico, Diana Magaloni Kerpel reveals a panorama of Christian images that informed the artists of Book 12.⁵²

One medieval Iberian work that is never cited but might also have influenced Sahagún's ambitious project, including its title, is the *General estoria* of the Spanish court of the learned monarch Alfonso X. It was the first great "historia general" produced in Castile. Written not in Latin but in Castilian, the *General estoria* was intended as a world history from the time of creation to the reign of Alfonso el Sabio, king of Castile and León (1252–1284). The unfinished work intertwines the Old Testament, Greek and Roman mythology, and extrabiblical information on the people and empires of the extended Mediterranean world and ends with the birth of Christ.⁵³ The *General estoria* relied on a wide array of sources in Latin (especially Pliny), Arabic, Castilian, French, and English; like Sahagún's *Historia*, it treats the histories of deities, kings, and earthly things. The manuscripts' euhemeristic interpretation of legends, in which gods and goddesses are treated as old kings, queens, and heroes who were worshipped as deities

after their deaths, resembles the Florentine Codex's treatment of Quetzalcoatl and Tezcatlipoca, for example, who lived in Toltec times and were later worshipped as gods. In the prologue to Book 8 Sahagún compares the legend of Quetzalcoatl to that of King Arthur, whose exploits are discussed at length in the *General estoria*, based on a translation of Geoffrey of Monmouth.⁵⁴ Sahagún likens the people and *altepetl* of central Mexico to those of the Mediterranean world, comparing Cholula to Rome, Tlaxcala to Carthage, Tula to Troy, and Mexico to Venice.⁵⁵ Like the ancient Romans, the people left impressive antiquities and structures strewn across the land, in places like Tula and Xochicalco. Sahagún's attempt to make sense of Mesoamerica by comparison with the Mediterranean pagan world is part of his *Historia general* project.

There is no doubt that Sahagún planned a work that is based to some degree on the hierarchy and categorization visible in classical, medieval, and Renaissance models. But ultimately the Florentine Codex is singular in that the end product relied on the constant participation of Nahuatl scholars who took the various prototypes presented by

Sahagún and adapted them to their own ways of gathering and presenting knowledge, filtered through their own choices of what to document and preserve. At the same time, the scholars were exposed to Hispanic values and were well versed in Christian beliefs. The dynamic process of exchange and interaction between Sahagún and his team of Nahuas created new forms of expression and knowledge. The manuscript's artwork makes apparent this adaptation. In many respects, the art style of the images is neither European nor Mesoamerican but an entirely new colonial creation. Thus the final product is truly unique, even compared with manuscripts produced in New Spain in the same century.⁵⁶

THE PRESENT VOLUME

Much has been written on the Florentine Codex; we are indebted to those who recognized the great value of the manuscript and spent much of their careers plumbing its rich commentary. We pay homage to such *luminosos* as Arthur Anderson, Charles Dibble, Ángel María Garibay Kintana, Wigberto Jiménez Moreno, Miguel León-Portilla, James Lockhart, Alfredo López Austin, H. B. Nicholson, Francisco del Paso y Troncoso, Donald Robertson—to name only a few. Many of their groundbreaking works on the Florentine Codex appear in the bibliography and throughout the many notes of this volume. This chapter draws from many previous introductory studies, especially the essays by Anderson and Dibble in the introductory volume to their English translation of the Nahuatl, which set a high standard for their clear and concise prose.⁵⁷ The introduction by Ángel María Garibay Kintana in the 1953–1954 edition of the *Historia general* is another invaluable source. Excellent studies of the Florentine Codex and related manuscripts include those compiled by Munro Edmonson (1974); J. Jorge Klor de Alva, H. B. Nicholson, and Eloise Quiñones Keber (1988); Quiñones Keber (2002); John Frederick Schwaller (2003); and Gerhard Wolf and Joseph Connors (2011). The list of contributors to these volumes reads like a who's who of Florentine Codex scholars. The *Handbook of Middle American Indians*, edited by Robert Wauchope, especially volume 13, part 2 (1973), contains several seminal essays on the Florentine Codex and manuscripts associated with Sahagún. The flagship research journal published by the Universidad Nacional Autónoma de México, *Estudios de Cultura Náhuatl*, founded in 1959, deserves recognition

for publishing hundreds of articles on the Florentine. The journal's longtime editor and contributing author, Miguel León-Portilla, has published many pieces related to the Florentine Codex in *Estudios* and is spearheading a multi-authored project to translate sections of Nahuatl text in the Florentine Codex into Spanish. A facsimile edition of the Florentine Codex, produced in 1979 by Giunti Barbera in Florence and the Secretaría de Gobernación in Mexico, spurred on studies of the codex. A facsimile edition and translation of the *Primeros memoriales*, translated by Thelma Sullivan and edited by Nicholson et al. (1993, 1997), represents another breakthrough. Jesús Bustamante García (1990) provides a useful, detailed examination of the composition of Sahagún's manuscripts. Most recently, Victoria Ríos Castaño (2014) has examined the methods and models of the *Historia universal* and Sahagún's mission of translation and conversion.

Yet the Florentine Codex remains an understudied work, considering its depth and breadth of content. Sahagún's primary interest was collecting and preserving the Nahuatl texts. His Spanish translation seems like a secondary consideration, an obligation frequently requested by his superiors and completed, for the most part, only in the final years of the project. The Spanish ranges from translating the Nahuatl text verbatim, to summarizing or ignoring it. And yet the Spanish data has been used more often by scholars. The very first publication of the *Historia general de las cosas de Nueva España*, in 1829–1830, by Carlos María de Bustamante, was based on the Tolosa manuscript version of the Spanish translation. Many subsequent editions were based on this same version. The monumental translation project of Anderson and Dibble (Sahagún, 1950–1982), and James Lockhart's translation of both the Nahuatl and the Spanish of Book 12 (1993), have enabled more recent studies of the Nahuatl, understood through English translation. Likewise, Ángel María Garibay Kintana and Miguel León-Portilla offer sections of the Nahuatl text of Book 12 in Spanish, in *Visión de los vencidos* (1959). Despite these excellent works, systematic analyses of the Florentine based on the original Nahuatl text are few.

The images of the Florentine were created last but clearly play a prominent role in the manuscript, judging by their number, quality, and color. Our 2015 conference was, to our knowledge, the first dedicated specifically to the interrelation of the three “texts”—the Nahuatl, the Spanish translation, and the images⁵⁸—and was certainly

the first to focus on how the images and their meanings differ from textual exegesis. The painstaking labor and commitment required to create so many detailed, colored paintings suggest that Nahuas insisted on including them, as discussed by Jeanette Peterson in chapter 1.

One important observation to emerge from the conference, and more fully underscored in the chapters of this volume, is that one cannot call the manuscript “Sahagún’s Florentine Codex.” In reality, Sahagún was more coordinator, compiler, editor, and translator than author. Garibay and León-Portilla advanced this idea as early as the 1950s.⁵⁹ But scholars are still coming to terms with how Nahua authors and artists contributed the essential content of the work. Sahagún assumed responsibility for the Spanish translation, and there is no doubt that he wrote the prologues and Spanish interpolations, but those parts constitute less than half of the total work and are not the primary contributions. Although Sahagún contributed to this notion by calling himself the “author” in the text, he also refers to himself as a compiler, and he credits many (but not all) of the Nahuas who played a pivotal role in the project.⁶⁰ In addition to those trilingual four already mentioned and on whom Sahagún relied the most—Antonio Valeriano, Martín Jacobita, Pedro de San Buenaventura, and Alonso Vegerano—other scribes included Diego de Grado and Bonifacio Maximiliano of Tlatelolco, and Mateo Severino of Xochimilco.⁶¹ Still others who came from different communities around the great lake of Texcoco contributed to the manuscript. For example, in Book 11 we find a list of Nahua *tiçitl*, or physicians, from barrios and parishes of Tlatelolco, who contributed their knowledge to the section on medical cures and herbs in folios 139v to 181. The experienced elders include Gaspar Matías and Pedro de Raquena of Concepción; Pedro Santiago and Miguel Motolinía of Santa Inés; Francisco Simón, Miguel Damián, and Miguel García of Santo Toribio; and Felipe Hernández of Santa Ana. In Book 10, another eight *médicos mexicanos* are listed as providing information for the preceding section (fols. 97–113v) on illnesses of the body: Juan Pérez, Pedro Pérez, Pedro Hernández, José Hernández, Miguel García, Francisco de la Cruz, Baltasar Juárez, and Antonio Martínez.⁶² Even those talented Nahuas who remain unnamed were not simply his “informants” or his “aides.” They were Sahagún’s sources of information: the multilingual writers of the Nahuatl text, the part of the work that was produced first; and the artists who “illuminated” the manuscript, the part that was done last.

Finally, it is important to consider what the manuscript means for Mexico and for the Americas in general. There is no doubt that the Florentine Codex is the most remarkable and most important intellectual product of the exchange between indigenous and European cultures in the early modern Atlantic world. Such a work could have been produced only in Mesoamerica, where the introduction of the Roman alphabet and European art style made sense to people who had been writing and painting with ink and natural colors for centuries. It is among the rare first manuscripts to represent indigenous cultures that involved indigenous people. It is the richest resource for the study of “classical” Nahuatl.

As a collaborative, multivoiced enterprise, the Florentine Codex embodies various modes of interpretation and transformation, processes that may be characterized as distorting or betraying the original while simultaneously, in the “creative destruction” that defines all translation, also being perceived as processes of “invention and renewal.”⁶³ The Nahua scribes and artists actively constructed versions of their cultural identity through their choice of vocabulary, as well as by means of syntactical and pictorial choices. Sahagún, on the other hand, seems to reconcile his inherited intellectual traditions and orthodox religiosity with his desire to bear witness to the differences, as well as the similarities, that marked the Americas. These dual objectives were not without tension, as manifest in Sahagún’s outlook as well as our modern assessment of his achievements. Scholars have tended to characterize the friar in rather polarized terms, as a learned scholar who sought to record indigenous language and knowledge, or as a physician of souls who employed inquisitorial methods of collecting information for pragmatic missionary purposes. Rather than regarding Sahagún primarily as a pioneer ethnographer (and something of an anachronism), or conversely as firmly rooted in a sixteenth-century Euro-Christian framework, the Franciscan seems to be caught between a medieval and modern mindset: the former defined knowledge as revealed by the grace of God, whereas the ideas of modernity credited the human intellect with the capability of producing knowledge, as Walden Browne argues.⁶⁴

In his task as cultural translator, collating and permanently inscribing the language and culture of the Nahuatl-speaking peoples, Sahagún adopted a Western book form and hierarchical organization of topics. Anthony Grafton critically notes that the vast quantity of incoming informa-

tion was shoehorned into existing schemata; in his words, Sahagún bent “the New World to the old systems.”⁶⁵ Nonetheless, while recognizing the European influences on the content and organization of the work, many of the authors in this volume discern indigenous or Nahua modes of categorizing knowledge, underscoring the discretionary power of the *tlacuiloque* over their sources and interpretative strategies. In other words, Sahagún had confidence in those who had trained with him, even if his trust in the Nahua population eventually dissipated into a darker suspicion, as censorship, age, disease, and the growing decline of the regular orders grew ever more debilitating in the later years. In the end, nothing went exactly according to plan in New Spain. Spanish intentions were seldom fully achieved and were always tempered and compromised by local actors and negotiations. This was true of Sahagún’s *Historia general*, as well. Sahagún clearly had his models, but the final manuscript reflects the profound input and subjectivity of the Nahua artists and writers on whom he depended to complete the project, as the chapters of this volume hope to show.

While keeping in mind the intellectual coherence of this volume and the complementary overlap between essays, we have subdivided the chapters loosely into four thematic sections: “The Art of Translation,” “Lords: Royal and Sacred,” “Ordering the Cosmos,” and “Social Discourse and Deviance.” We recognize that in doing so we, too, are guilty of imposing our academic need to classify knowledge.

THE ART OF TRANSLATION

The philological objective of Sahagún, that is, his aim to produce a sweeping and inclusive dictionary of the Nahuatl language, is laudable in a time period when the indigenous languages of the Americas were increasingly under siege. For Spanish officials, particularly ecclesiastical authorities, words in native tongues were inherently suspect and images potentially idolatrous; translation itself might camouflage heretical ideas and harbor dangerous political meanings. The first section, “The Art of Translation,” encompasses four chapters that directly and indirectly confront the textual and pictorial facets of the translational process within the contested social, political, and counterreformational milieu of late sixteenth-century Spain and New Spain. The slippage inherent in these acts of translation is understood as a process that generates new meanings.⁶⁶

Jeanette Favrot Peterson addresses not only the nature and motives behind the plethora of images in the Florentine Codex but also the historiographic factors that promoted textual exegesis of the manuscript while hindering serious scholarship of its paintings. While acknowledging the pervasive stylistic and iconographic Europeanizations visible in the imagery, Peterson also locates meaningful signs reflective of an indigenous worldview and long-standing pictographic tradition. As indices of intercultural dynamics, the images reinforce the appeal of the Florentine Codex to dual audiences and betray the Nahua painters’ roles as vital participants in the creation of the manuscript.

Ida Giovanna Rao’s remarkable discovery of the earliest translation into Italian of the first five books of the Florentine Codex (with Lia Markey) underscores the almost immediate recognition of the illuminated manuscript’s significance. Notwithstanding Ferdinando I de’ Medici’s own Catholic fervor and his belief in a universal Christendom, his humanist education made him open to the value of the newly discovered Americas. Through a selection of excerpts published for the first time, herein also in English, Rao demonstrates the care with which the professional (if anonymous) translator worked literally, rather than liberally, making changes primarily in the abbreviation of some passages.

Nowhere are the partisan motivations of translators more apparent than in the competing Nahua-Spanish dialogues on the conquest in Book 12. Kevin Terraciano deconstructs the Mexica (Nahua) narrative, one of the earliest accounts (1555) from an indigenous perspective. He identifies significant differences between the Nahuatl text and the Spanish translation, which is much shorter than the original, and considers reasons for the discrepancies. The paintings of Book 12 operate somewhat independently, both adhering to the narrative and veering off to depict other memories not articulated in the alphabetic texts. Terraciano connects the conspicuous, exaggerated display of feathers in the headgear of both indigenous and European protagonists with Nahua concepts of *tonalli* and *teotl*, extreme force and power. A close analysis of all three “texts” enriches our understanding of this invaluable indigenous account of the encounter and war.

The appropriation and translation of a wide array of pictorial prototypes by the Florentine’s painters is the theme of Pablo Escalante Gonzalbo’s chapter. Given the wealth of humanist publications in monastic libraries from

which the *tlacuiloque* drew inspiration, Escalante Gonzalbo points to the influence of emblem books and published pharmacopeia of nature,⁶⁷ as well as of the 1565 edition of *Historia de gentibus septentrionalibus*, by the bishop Olaus Magnus. The author explores the formal analogies with these sources, and analyzes their content and meaning to reveal linked messaging that is not neutral but imbued with political and moralizing commentary.

LORDS: ROYAL AND SACRED

Given the attention to elite history, governance, and cosmology in the extant precontact records of Mesoamerica and coeval colonial accounts, it is not surprising that several books in the Florentine Codex are devoted to the lordly class in Aztec society, as well as to the priesthood, divine beings, and the rituals held to honor them. Paradoxically, while Sahagún's mission was obsessed with eradicating idolatry, in the encyclopedic project he preserves those same "idols," methodically, but not always objectively, documenting the indigenous Mesoamerican pantheon in order to create a kind of missionaries' guidebook to the Aztec supernatural world. Sahagún intended the Florentine Codex to serve as one of several "weapons" to fight the devil, under whose dominion idolatry was practiced.⁶⁸ The three chapters in the section "Lords: Royal and Sacred" interrogate the transformations that occurred between the indigenous and the European prototypes of gods and kings and their depictions in Sahagún's manuscripts. These authors suggest varied motives for the Aztec deities assuming more humanlike representations, while addressing the core issue of the gods' ontology, or how divinity (the complex Nahuatl term *teotl*) was understood, even when filtered through a Christian perspective.

Eloise Quiñones Keber undertakes a comparative study of the representation of Aztec deities and their calendrical festivals as they evolved from the *Primeros memoriales* to the Florentine Codex twenty years later. In the weaving together of memory, oral testimony, and the mnemonic prompts provided by the "ancient paintings," Sahagún's team gathered information about the attire worn by each of the deities, their perceived powers, and their ritual roles. Quiñones Keber reconstructs how and why the descriptions of the gods expanded to their more fulsome treatment in the Florentine Codex, focusing on the evolution of the earth and corn goddess Chicomecoatl (Seven Serpent). The author also analyzes the increased extravagance

and complexity of the *veintena*, or twenty-day festival, as practiced in the martial ceremonies of the Mexica capital.

In exploring the disparity between the Aztec kings and the supernaturals in the illustrated manuscripts attributed to Sahagún, Elizabeth Hill Boone traces the continuities and ruptures with the antecedents available to the Franciscan and his team. Royal lords easily migrated almost verbatim from the flat, ideoplastic images of precontact annals histories to the folios produced by Sahagún's team of Nahua artists. In contrast, the representations of Aztec gods required scribes and artists to innovate from bicultural models. Sixteenth-century publications on the pagan gods offered appropriate templates for the textual information on their taxonomy, appearance, and physical attributes, referring to both pictorial models from indigenous codices and manuals of classical deities. In the transfer to the European mimetic canon, Boone concludes that Aztec deities were severed from their divinatory prequest meaning, yielding "simple visual representations of anthropomorphic beings."

The anthropomorphism of the godly images is further explored by Guilhem Olivier, who probes the delicate semantic and conceptual overlap between the humanity of the gods and the divinization of mortals as manifest in the Florentine Codex. In the search for an antecedent, Olivier points to the theory of euhemerism, from the Greek Euhemerus of the fourth century BCE. As Quiñones Keber and Boone also recognize, the equivalency of Aztec deities to their classical counterparts was intended not only to enhance the reader's familiarity with a known European entity but also to diminish the divinity of the indigenous gods. Although perhaps a successful reductive strategy, this process was never one of complete erasure, as Olivier demonstrates with his painstaking analysis of the multivalent term *teotl* (plural *teteo*), often translated as "god." *Teotl* had a wide semantic range, referring to something marvelous or one imbued with solar energy (*tonalli*), a significance that allowed for the assimilation of the European newcomers at contact to be perceived as *teteo*, connecting with observations made by Terraciano in chapter 3.⁶⁹

ORDERING THE COSMOS

The chapters in this next section rest on a fundamental tenet of the Nahua worldview, that of cosmic order. One of the awesome responsibilities of the Nahua governing class was to maintain an equilibrium between the human

and the supernatural realms, a balance that ensured a predictable rotation of the universe and dependable provisions for life. An order-disorder dialectic framed Nahua cognitive structures, social interactions, ritual behavior, morality, and even the animacy with which painted images were endowed.

Order in the Nahua world was menaced routinely by the ecological challenges of the lacustrine environs of Mexico City–Tenochtitlan. Water, both an essential life-giving entity yet a deadly force, had to be properly managed. Barbara E. Mundy links the relationship of such natural threats as floods to the authority of Mexica leaders, who were perceived as appropriate custodians of water management. The author highlights the propitiatory offerings and sacrifices to petition and control water-related threats that occurred at the ceremonial site of Pantitlan, an anomalous whirlpool-spring in Lake Texcoco. Mundy also investigates a second aberrant phenomenon, the furry aquatic creature known as *acuitlachtli* (water bear), a type of nutria that was equally transgressive in its hybridity, habitat, and the danger it posed to the city's water supply. Both the ritual site and the animal occupied liminal zones, representing the kind of eruption that indigenous leaders were charged to eliminate or minimize in their efforts to sustain a precarious cosmos.

Molly H. Bassett similarly erases the Western boundary between the natural and the supernatural in the Nahua lifeworld. In a bold proposal, she argues that “nature” provided a template for a Nahua way of clustering knowledge: literally and figuratively conceived of as a *quimilli*, or bundle (a unit of twenty). Bassett explores one of the sacred bundles, the *tlaquimilolli*, conceptualized as a temple-mountain, not only as biologically and socially essential, but also as an embodiment of divine forces. Another example, the *ocelotl* bundle, is more hypothetical, but the author provides evidence for the potency of the spotted jaguar pelage as an organizing principle and a sign of sacred and political power. Bassett's project resonates with Olivier's contention that although the structural clustering of the Aztec deities in the Florentine Codex conforms to an overarching Roman pantheon, we need to investigate alternative autochthonous taxonomies.⁷⁰

The permeable membrane between the interlocking human and sacred spheres is also a foundational idea in Diana Magaloni Kerpel's essay on the expressive carriers of Nahua knowledge from the “other side,” crossing time,

space, and degrees of animacy. The author explores spoken word and painted image in the Florentine Codex as creative acts, divinely generated and in some cases displaying a “living presence.”⁷¹ Images could be embodiments of the sacred, thus becoming more than just a representation.⁷² To reveal the layered meanings of ritual discourse, as well as in the Florentine's imagistic sign system, she uses the Tzeltal Maya metaphor of a flower's “unfolding” with all of its sensory implications, as recorded by Pedro Pitararch. Magaloni Kerpel also applies her understanding of the pigments used in the Florentine Codex to support the tenacity with which the *tlacuiloque* continued to perceive images as signifying vehicles with their own palette and material makeup.

SOCIAL DISCOURSE AND DEVIANCE

The spoken word, and its power to communicate knowledge in a culture that valued orality above all, was also crucial to maintaining stability in an inherently disorderly world. In this final section, “Social Discourse and Deviance,” words are shown to exert so much weight that they bear authority over the Nahua body politic. These chapters also underscore the composite, often contested, nature of pictorial representation when caught between two discrete cultural and religious systems. Whereas pictures in other encyclopedic manuscripts, such as the Codex Mendoza, discussed before, juxtapose indigenous pictorial models with Spanish alphabetic script,⁷³ the images in the Florentine more commonly conflate diverse systems of representation to create new syntheses within competing prescriptive norms in a multiethnic society.

If the elite played a central role in maintaining cosmic order, as Mundy makes clear in the previous section, they manifested this fundamental responsibility in their cultivated mastery over rhetoric and the esoteric knowledge it encapsulated. Jeanette Favrot Peterson explores the most formal of the discourses, known as the *huehuetlatolli* (speech of the elders), that transmitted Nahua values and beliefs to the next generation. Sahagún recognized the metaphorical elegance of these orations as well as their didactic utility early in his career. Although the Nahuatl texts constitute some of the most authentic material in the Florentine Codex, paradoxically, the *huehuetlatolli* and prayers were regularly appropriated for the mendicants' sermons. Christian scenes were similarly integrated into

the mixed syntax of the black-and-white images in Book 6, ironically sacralizing Nahua rhetoric.

Similarly, Lisa Sousa reveals the variety of strategies in Book 10 deployed by the indigenous authors and artists to retain Nahua values while adhering in part to new Christian prescriptions of good and evil in the sections on social deviants. The Nahuatl text articulates traditional ideals of what constituted morality, employing verbal metaphors of speech and flowers. The more hybrid images adopt certain European style traits and figural forms that either condemn or condone certain behaviors, while signaling speech and flower metaphors or adding new information featuring Nahua glyphic elements. The figures of the so-called prostitute (*ahuiani*) and adulteress (*tetzauhcióatl*), for example, are shown standing precariously on, or holding, water (the *atl* glyph). The water glyphs operate phonetically as well as symbolically, reinforcing the censorious Nahua attitude toward women whose deviant behavior was considered fluid, irresponsible, and ultimately a threat to the social, economic, and political order.

There is no more dramatic disjunction between the Spanish and Nahuatl texts in the Florentine Codex than those found in chapter 27 of Book 10. Ellen T. Baird compares Sahagún's Spanish lament at the status of mendicant affairs regarding their indigenous charges with the parallel Nahuatl texts that steadily enumerate anatomical parts. Although the two textual narratives reveal a kind of split agenda, the images manage to bridge or comment on both texts. The visualization of severed body parts mirrors Sahagún's cognizance of the increasing dissolution of the Nahua body politic in the face of colonial threats and natural disasters. Baird parses, in both the written and pictorial elements of the Florentine, the order-disorder dialectic as it played out within a New Spain reeling from the impact of recurrent, deadly plagues.

The contributors to this volume share a genuine and deep respect for the authors and artists of the Florentine Codex, who compiled such a monumental encyclopedia of Nahua culture in a time of crisis. Not only are all thirteen chapters the product of collegial exchanges within our community of scholars; in addition, they acknowledge the work and insights that preceded our own. We hope that our present volume will encourage others to appreciate the "treasure" that we now call the Florentine Codex.

NOTES

I thank Jeanette Peterson for her many contributions to this introduction and for the extensive comments, suggestions, edits, and additions she has made to multiple drafts. She also deserves credit for creating first drafts of the tables. I am fortunate to have worked closely with Jeanette on this project, since we began to plan our conference at UCLA and the Getty in 2014. Her consummate professional manner, enthusiasm, friendship, and good humor are most appreciated. I also thank Eloise Quiñones Keber, Barbara Mundy, and Lisa Sousa for their valuable comments on a draft of the introduction.

51. Escalante Gonzalbo 1999.
52. Magaloni Kerpel 2016.
53. Most of the extant (lengthy but incomplete) manuscripts are in the Biblioteca de El Escorial or the Biblioteca Nacional de España.
54. Sahagún 1950–1982, introductory vol., prologue to Bk. 8, 69.
55. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 48.
56. For comparative purposes, Diego Durán’s *Historia de las Indias de Nueva España e islas y tierra firme*, completed in 1579, deserves mention. The Dominican conducted interviews with elders and consulted pictorial texts, especially in Tetzcoco. Nahuatl artists added dozens of illustrations to the manuscript, which was not published until the late nineteenth century (1867–1880).
57. See Sahagún 1950–1982, introductory vol.
58. See Terraciano 2010 on the idea of the three texts.
59. Sahagún 1956, vol. 1, 10–12; León-Portilla 1958, 18. Cited in Bustamante García 1990, 237–238.
60. Lockhart 1993, 28. Sahagún claims to be the author in the prologue to Book 2, and then his interpolation in the Spanish column of chapter 39, Book 12, bears the heading “author.” In this same prologue he refers to the vital role that Nahuas played, and again in chapter 27 of Book 10 he attests to the abilities and potential of native scholars. He refers to “compiling” the manuscript in the prologue to Book 10.
61. Sahagún 1950–1982, introductory vol., prologue to Bk. 2, 55.
62. Sahagún 1979, Bk. 11, fols. 180v–181, and Bk. 10, fol. 113v; López Austin 1988, 1:42; Dufendach 2017, 220. It is possible that the same Miguel García is listed in both groups, although it is a common name and could represent two different men.
63. Cronin 2003, 38.
64. On the tension between the medieval and modern mindset, see Browne 2000, esp. 9, 72; for a counterargument, León-Portilla (2002a, 9–11, 258–267) maintains Sahagún’s title as a “pioneer of anthropology.”
65. Grafton 1992, 116–117. Grafton is severe in his condemnation, claiming that Sahagún “freeze-dried the multiple, protean ingredients of their [the Nahuas’] cultural tradition” (1992, 146).
66. Wouk 2017, 1–3, 8–9.
67. Escalante Gonzalbo 1999.
68. Sahagún 1950–1982, introductory vol., prologue to Bk. 3, 59.
69. Bassett 2015.
70. Olivier 2016.
71. Other Mesoamerican traditions that endowed animacy or a living essence to their glyphic signs include the Maya, the Mixtec, and the Cotzumalhuapan cultures. On this see Chinchilla Mazariegos 2011, 59–66.
72. Alonso de Molina (1977, pt. 2, fol. 95v) defines *teixiptla* as “image of someone, substitute, or delegate” (“imagen de alguno, sustituto, o delegado”).

PART I

THE ART OF TRANSLATION

FIGURE 1.1. Fernando Gallego, *El Cielo de Salamanca*. Mural, ca. 1485. Vault frescoes, Escuelas Menores, University of Salamanca. Photograph by Kirk L. Peterson.

Images in Translation

A Codex “Muy Historiado”

JEANETTE FAVROT PETERSON

Before taking his vows and venturing to the “New World” in 1529, it is likely that a young Bernardino de Sahagún studied in the library of the University of Salamanca beneath a spectacular vault of the night sky. Painted by Fernando Gallego between 1483 and 1486, the extant portion of the original dome is populated with a zodiacal mix of fantastic creatures and accurately plotted constellations (fig. 1.1).¹ The celestial signs in what has popularly come to be called the *Cielo de Salamanca* can be traced to Islamic and classical models that Gallego creatively combined from multiple sources.² Among his prototypes are the medieval ink drawings of the constellations based on Islamic iconography that were used to teach astronomy at Salamanca, as well as the traditional globes illustrating the Islamic signs of the zodiac, so popular in fifteenth-century Spain.³ Additional models have been traced to Italian and Northern European graphics, such as the woodcuts from Hygin’s *Poeticon astronomicon* of 1482 and various editions of the *Triumphs* of Petrarch.⁴ No single source, however, can adequately account for all of Gallego’s inventive, even inverted, variations. Gallego’s artistic independence, quite as freewheeling as the airborne constellations that spin across the picture plane, can be productively compared with the creativity displayed by the indigenous painters of the Florentine Codex.

What also might have caught Sahagún’s eye as he gazed upward to Gallego’s mural is the Latin inscription that frames the circumference of this star map. The inscription marks the limits, both physical and conceptual, of the

celestial scene. The biblical text quotes Psalm 8: “When I look up at the heavens, the work of thy fingers, the moon and the stars set in their place by thee.”⁵ The order imposed by the linear-reading pattern of the quotation, as much as its message, suggests to the viewer that the firmament, even the passage of time itself, is in the hands of a divine sovereign. An audience from Sahagún’s time would have appreciated the differences between the word-signs and the picture-signs, whether or not they were fully legible; at the very least, the lofty location of the mural evoked an appropriately heavenly scene and echoed the learned ambiance of the academic library, considered to be a “temple of knowledge.” To the educated, Latinate spectator, both systems of communication would have been recognizable.

Just as in this ceiling mural, in which Gallego deftly reconciles several epistemological systems within the scaffolding of Christian tenets, so the Florentine Codex’s scribes and artists negotiate between several semantic and representational systems. This feat was not unusual for individuals immersed in the social, religious, intellectual, and aesthetic crosscurrents of early modern Spain and New Spain. For both the Spanish painter and the Florentine Codex team, their projects were an exercise in transmission and translation on several levels, adapting and recombining old and contemporary, classical and Renaissance, pagan and Christian, alphabetic text and pictorial imagery. The dialectics of reading and viewing conflated word and image and mixed the profane with the sacred. In this and other ways developed in this chapter, the Gallego

fresco acts as an apt metaphor for the formidable task confronted by Sahagún and offers us an entry point into the issues of translatability that Sahagún and his indigenous team of collaborators undertook in producing the *Historia general de las cosas de Nueva España*, terminating in the Florentine Codex.

The conjecture that Sahagún passed a portion of his student days at the University of Salamanca is based on an offhand remark by Gerónimo de Mendieta and on the close academic ties between the Franciscan monastery in Salamanca, where Sahagún took his vows, and the famed university.⁶ His broad education in the liberal arts and theology illuminates his objectives and the manner in which he packaged his information in the *Historia general*. Like Gallego, Sahagún was nurtured in a cosmopolitan university city and a multicultural milieu that profoundly shaped his worldview.⁷ Moreover, the late fifteenth and early sixteenth centuries witnessed a flood of new publications. By 1500, Spain had multiple printing presses (Salamanca alone had eleven registered printers) that in two decades produced over 1,307 books.⁸ Sahagún had access to much of the world in print.

In this same time period, the advent of printing accelerated acts of translation, acts that could be heard and seen almost everywhere in Castile. The university encouraged philological studies in languages from Aramaic to Greek; the production of dictionaries and polyglot bibles was being actively pursued; and the visual landscape of Spain continued to be a heterodox combination of artistic traditions, from North African tiles and *mudéjar* wooden-inlay ceilings to the Italianate facades that increasingly graced palaces and civic buildings. As Salamanca was situated on one of the pilgrimage routes to Santiago de Compostela, the community participated in the string of art fairs in which imported books, prints, paintings, and decorative arts were sold duty-free.⁹ Sahagún could not have been immune to this intoxicating mix of the foreign and the familiar, a potent brew of intercultural expressions that must have rendered the friar more receptive to the alterity of the New World.

The diverse modes of translation, indeed the very translatability of the Florentine Codex, underpin this chapter. Both Sahagún and his Nahua collaborators encountered the challenges of translation while trying to bridge their discrete worldviews. As do other of the volume chapters, I attend to the interface of the Florentine texts and pictures and probe questions raised by the almost 2,500 images

in books that Sahagún called “muy historiados,” or lavishly illustrated.¹⁰ I argue that the Florentine is as much a pictorial as a textual compendium. This essay also explores the rationale for including the plethora of images as well as their sources and function, issues that require historiographic hindsight. With the surfeit of scholarship on the textual content of the Florentine Codex, when did the Florentine’s images begin to be analyzed seriously, why have they been sidelined as mere illustrations, and how do they function as carriers of meaning? Are the associated paintings complementary to the text, contradictory, or are they entirely new creations quite independent of their textual matrix?

THE DIALECTICS OF TRANSLATION

Translation always entails movement as texts and images are transposed through time, space, and the pen or brush of the human mediator, promoting, in every case, changes and innovations both overt and subtle. These shifts are foregrounded throughout the production of the *Historia general*, as the transmission of indigenous knowledge was passed from oral testimony to an alphabetic record; from Nahuatl speakers to bi- or trilingual scribes conversant in Spanish and Latin; from painted pre-Hispanic scroll or flat cloth (*lienzo*) to a Westernized book format; from machine-printed models to hand-crafted pictures. In transit across language, media, and cultural dimensions, expressive modalities were displaced, reconfigured, and re-contextualized, thus acquiring new signification.

Given these translational shifts, to what degree can scholars today fully appreciate the sixteenth-century meaning and intent of the Florentine’s texts and images? This question touches on the fundamental concern of cultural incommensurability, particularly when separated by some four and a half centuries. Said another way, can a modern-day historian overcome the challenges of decoding a colonial document and its claims to record memories of a preconquest past?¹¹ Alessandra Russo’s use of the term “untranslatable image” is applicable to this inquiry, not to imply that cultural and linguistic differences are irreconcilable, but rather to emphasize the ongoing and dynamic process of translation: the discovery of the “infinite possibilities at play during the passages from one artistic world to another.”¹² There is no presumption here that we can entirely untangle the indigenous and Hispanic worldviews embedded in the Florentine Codex, but we can situate the

FIGURE 1.2. Omens in Tenochtitlan presaging conquest. Florentine Codex, Bk. 8, fol. 3r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

manuscript and its makers more securely at the nexus of an intense Nahua and European interchange in New Spain.

To one degree or another, all the volume authors probe the intertextual relationships and ask how the images are related to the accompanying language texts, as well as how the imagery may signify differently. Although its bilingual words and pictures are sometimes referred to as three “texts,” one needs to recognize the multivalence of the image, or the “suggestive intricacies” of the pictorial component, as Nicholas Thomas puts it.¹³ Both texts and images can breed ambiguous readings, and both entail the acts of “reading” and seeing, but images are more evocative in their sensory capacity, and they possess wider interpretative latitude, somewhat analogous to Gallego’s painted

constellations in his Salamanca sky. The celestial signs in Gallego’s mural provoke wonder in their delicate hues and curvilinear posturing; they also incorporate multiple cultural and stylistic traditions in contrast with the enframing ribbon of Latin text that anchors the scene to a single biblical source. Similarly, in the Florentine Codex the images betray layered spatial and temporal dimensions, readily sliding across and combining formal and iconographic conventions.

A majority of the narrative or “primary” pictures (ca. 1,860) in the Florentine Codex occupy rectangular, black-framed enclosures that set them off spatially from the double columns of alphabetic lettering, a format that mimics the typography of a printed book (fig. 1.2). The formal

isolation of the pictures in the page layout, as well as the mimetic and illusionistic nature of many of the images, speaks to their resonance with European traditions. The indigenous painter-writers called *tlacuiloque* (singular *tlacuilo*) adapted the newly imported writing and artistic canons in inventive ways. Nonetheless, a noteworthy portion of the Florentine Codex imagery also displays a mixed graphic system, incorporating elements of the precontact Mexican pictorial script, whether of syntax, style, or linguistic signs.¹⁴ In spite of the radical changes that ensued in modes of visual communication after the conquest, certain Nahua iconic and glyphic elements endured. Indeed, it is the images that betray the most striking intermingling of the indigenous and the European ways of knowing and seeing.

With only one slight reference to the opulent illuminations (“muy historiados”), Sahagún is surprisingly mute on his rationale for leaving open the spaces they fill. Whereas in places Sahagún’s Spanish translation abbreviates or eliminates the Nahua text, thus leaving lacunae in the left-hand vertical column that the images could occupy, the layout alone does not explain the expense and training allocated to having a phalanx of painters on his collaborative team.¹⁵ Additionally perplexing, the Franciscan says virtually nothing about the painting skills of his indigenous assistants or their education, sources, and agency—in part, perhaps, because the scribal and painting arts were traditionally conjoined in the profession of *tlacuilo*; we cannot now know who in the Tlatelolco scriptorium brandished the paintbrush and who wielded the quill. However, Sahagún does explicitly name the seven multilingual grammarians and scribes who assisted with the text.¹⁶ This volume takes a significant step toward filling some of these gaps in our knowledge, providing logical source material for the Florentine’s images, both indigenous and imported, and helping to build a more compelling argument for the artists’ broad humanist and artistic education, as well as their relatively independent status.

A PROFUSION OF IMAGES: HISTORIOGRAPHY AND RATIONALE

Despite the expertise devoted to transcribing and translating the Nahuatl and Spanish-language texts,¹⁷ comparatively little attention has been paid to the Florentine Codex images and even less to their critical evaluation. Attending to three broad, interrelated factors, I first address

this historiographical lapse: why has the study of images lagged behind the veritable mountain of textual exegesis? Were there physical limitations or disciplinary barriers that interfered with a close analysis of the images? As important, when examining the history of Sahaguntine scholarship, at what point was the imagery assumed to be a meaningful “third text,” as mentioned before?

Second, why did the Franciscan expend so much time, energy, and coinage, funds that he and his order could ill afford, to ensure that his cherished *Historia general* would perform as an aesthetic object and not merely as a textual document of a native culture and its language? Were these editorial decisions exclusively Sahagún’s, considering the multiauthored, collaborative nature of the Florentine Codex’s production? To what degree was input from the indigenous artists working in the *tlacuilo* tradition also a major factor?

Third, to begin to answer the more challenging question of the Nahua painters’ role in determining the nature of the imagery, I explore the merits and limitations of tracking the potential artistic sources. In order to gain insight into the creative process as well as the problematic issue of authorial control, one fruitful avenue is to locate the painters’ models, both indigenous and European. While many of the studies in this volume ferret out new connections with an ever-widening source of pictorial models at the artists’ disposal, scholars are only beginning to grasp the implications of the artists’ selections. In delineating the processes of translation, with concomitant misunderstandings and inversions of meaning, scholars are in a better position to grasp the complexity of the Florentine Codex paintings.

HISTORIOGRAPHY OF IMAGE SCHOLARSHIP

To begin with the historiographical issue, the comparative paucity of scholarship on the Florentine Codex images can be attributed in part to the afterlife of the codex, that is, to its delayed publication record and the inferior quality of reproductions in these publications, as well as to disciplinary biases that relegated visual culture to a secondary, even second-class, role in academia. Soon after the arrival of the Florentine Codex in Italy (ca. 1587–1588), its first five books were translated into Italian, attesting to the immediate recognition of the manuscript’s significance. For some three centuries thereafter, however, the codex re-

sided essentially hidden in its Medici repository.¹⁸ The last two decades in the nineteenth century finally witnessed a concerted scholarly effort to compile and translate Sahaguntine material, including the Madrid Codices (Códices Matritenses) and the Florentine Codex. Two of the most prominent scholars who led this effort, Eduard Seler and Francisco del Paso y Troncoso, placed a value on preserving and studying the images as well as the Nahuatl texts. Eduard Seler, an ardent Americanist, applied his prodigious talents as a comparative linguist, archaeologist, and ethnographer to the task of translating and interpreting many Middle American pictorial manuscripts and, in 1888, was one of the first to publish facets of Sahagún's illustrated works.¹⁹ Seler's synthetic commentaries have remained fundamental to the study of Mesoamerican indigenous cultures, particularly in religious and calendrical observations, as well as in deity recognition and costume paraphernalia. Seler's erudition and keen eye prompted him to apply a comparative technique, making astute, sometimes overly determined analogies between the signs of indigenous writing systems and the images found in Sahagún. They provide evidence that Sahagún's painters remained conversant with traditional Nahua knowledge, even if imperfectly preserved and understood.

Seler would encounter his only obstruction to an otherwise prolific publishing record when confronted with the mandate of Francisco del Paso y Troncoso, an historian of equal talent and perseverance. As director of the national museum of Mexico and a representative of the Mexican government, Paso y Troncoso was able to impose an embargo on Seler's access to Sahaguntine material.²⁰ A second ironic twist in this intertwined history of competing agendas is that the Mexican scholar's grand plan—to systematically locate, edit, and publish all of Sahagún's writings—was stymied by Paso y Troncoso's own obsession with meticulous note-taking; only a fragment of the many archival documents he copied and annotated was ever published, and many only posthumously.²¹ Although his zeal and ambitious goals exceeded his funding and the constraints of one lifetime, Paso y Troncoso's publications (1905–1907, 1926) did eventually bring to light a large portion of the images.²² Like Seler, the Mexican scholar recognized the cultural significance of the illustrations in Sahagún's writings.

Paso y Troncoso's images created a template for reproductions that persists in most publications on Aztec or colonial Mexico. His efforts established the value of the

Sahaguntine images but also, paradoxically, have impeded our ability to assess accurately the original paintings and their context. Volume 5 of his envisioned fifteen volumes incorporates the loose folios of Sahaguntine plates, including the images from the *Primeros memoriales* and the Florentine Codex (fig. 1.3). Paso y Troncoso commissioned Alejandro Ruffoni to produce chromolithographs in Italy after drawings made from the original in Florence, from 1893 to 1895, by the Mexican artist Genaro López. As precise as were the manual copies by López, they introduced slight and unintended alterations. Ruffoni's lithographs were subsequently printed and replicated ad infinitum, undergoing an additional transformation when they were widely circulated as black-and-white photographic reproductions in Arthur Anderson and Charles Dibble's invaluable transcription and translation of the Florentine's Nahuatl texts.²³ Even after the 1979 facsimile of the Florentine Codex appeared, limited in its circulation, the interested public continued to rely primarily on the third-generation black-and-white photographs—of the lithographs—of the ink and wash drawings by a late nineteenth-century draftsman.

Just as Paso y Troncoso gathered the Florentine's images for publication under separate cover, so Anderson and Dibble grouped the pictures in discrete, central sections within each of the twelve books in their series of the Florentine Codex (fig. 1.4). The clustered images are thus physically prohibited from having any dialogue with the relevant texts, a separation that greatly reduces, and even forecloses, their signifying capability. Like taxonomic specimens, each image is bounded within a black frame, numbered and keyed to a caption below that also provides an approximate location in the narrative of the Florentine Codex, generally a chapter. The reader is not only left to guess where precisely the Nahua painter intended to locate his image but also required to undertake the cumbersome mechanics of flipping back and forth between the corresponding image section and relevant text. The discrepancy between the original hand-painted images and their reproduced monochromatic copies also introduces formal inaccuracies: scale is standardized, and a heavier, undifferentiated outline of each pictorial element does not adequately convey the fluid grace of the manuscript's ink lines, to say nothing of omitting altogether the translucent washes and vivid colors of the originals.

A portion of what is lost in the images' signifying capacity can be assessed through one comparative example

FIGURE 1.3. Rulers of Tenochtitlan and two omens in Book 8. *Historia general de las cosas de Nueva España* (1926 [1905]), ed. Francisco del Paso y Troncoso, vol. 5, pl. XLVI. Lithograph. Getty Research Institute, Los Angeles (91-B18105 [v.5]).

taken from Book 8, “The Kings.” Both the Paso y Troncoso and its duplicate plate in black and white from Anderson and Dibble condense the images of twelve folios (1r–6v) to a single plate (compare figs. 1.3 and 1.4). Twenty-five rulers from Tenochtitlan and Tlatelolco are shown on one composite folio, the rulers rendered in profile and seated on their woven-mat thrones with their name glyphs hovering behind them. These codified depictions remain faithful to the traditional indigenous conventions known to the Nahuatl *tlacuiloque*, as Elizabeth Boone argues (see chapter 6 of this volume). The royal figures are consigned to a cellular grid, bracketed off from each other as well as from the explanatory texts. Conversely, in the Florentine Codex, the rulers float unbounded but proximal to the relevant commentaries on their reigns (see fig. 6.4, p. 100).

FIGURE 1.4. Rulers of Tenochtitlan and two omens from Book 8. *Florentine Codex* (1950–1982), ed. Arthur J. O. Anderson and Charles E. Dibble. Lithograph. Courtesy of University of Utah Press.

The importance of studying the Florentine Codex images in concert with the written story line and their original color scheme is confirmed in a close examination of the center rectangular panel (no. 10 on the composite plate) of this folio on Aztec kings (see figs. 1.3 and 1.4). A large scene encapsulates three omens that presage the fall of Tenochtitlan during the reign of the ninth Aztec ruler, Motecuhzoma II.²⁴ Only when inserted back into the original text of the Florentine Codex can we fully comprehend the meaning of the omens depicted (see fig. 1.2). By resituating the image within the Nahuatl narrative we can interpret the three foreboding signs, visually read in a counterclockwise movement from the top (fig. 1.5). This circular pattern follows the order of the text that describes the omens as, first (top and center), a strange “singing”

FIGURE 1.5. Omens presaging conquest: House of Song sings and Cihuacoatl (Serpent Woman) appears. Florentine Codex, Bk. 8, fol. 3r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

building; second (middle left), the nocturnal appearance of the Serpent Woman (Cihuacoatl); and, third (lower right), a woman lying on her back. The prone figure likely represents the woman who is said to have died of a sickness but was then resuscitated, at which time she confronts Motecuhzoma II with predictions of the end of his reign. Four other indigenous participants (three male and one female) in this complex drama tearfully respond to these apocalyptic omens.

Using traditional song scrolls, the artist carefully delineates the relevant Nahuatl description of the strange intonations emanating from the dislodged wooden beam of the song house (*cuicacalli*) and the wailing of the hybrid Serpent Woman, who prophesizes abandonment and defeat. The sound scrolls are communicated through vivid orange, blue, and blue-green volutes that curl away from the architectural beam and the Serpent Woman, vocal in-

flections that in their brilliant coloration move beyond ordinary speech. Absent the varied color scheme, the monochromatic Anderson and Dibble plate (see fig. 1.4) cannot convey the rich implications of the original image. I will return to further explicate this image for its stylistic hybridity and the painter's inventive use of glyphic signs, an indigenous strategy that relied on the images to communicate certain concepts.

Given the limitations imposed by Paso y Troncoso's composite reproductions, and their recycled monochromatic appearance in the Anderson and Dibble editions, it is perhaps not surprising that there was a time lag before the images of the Florentine Codex were themselves the object of sustained research.²⁵ Not until 1959 did Donald Robertson, an art historian, pioneer one of the first studies on colonial manuscript painting with a chapter on the images in Sahagún's manuscripts.²⁶ Although

still dependent on the Paso y Troncoso lithographs in black and white, he analyzed them for the first time using the tools of formal analysis specific to the discipline of art history. To name only a few of the traits Robertson discusses, they include spatial relationships, scale, quality of line, and figural realism or abstraction; by necessity, his consideration of color in the images is largely missing. Robertson uses these stylistic criteria to construct “patterns of classification” in order to distinguish between pre- and postconquest schools, making the useful distinction between native painting styles that are conservative and more “conceptual” in nature, and the “perceptual” painting styles in pictorial manuscripts that demonstrate a greater degree of Europeanization and three-dimensional illusionism.²⁷ Robertson recognized that some of the Florentine’s images, in spite of their acculturation, still performed their indigenous roles as stand-alone bearers of information. Those images with a visible “dual legacy” of native and imported elements, on the other hand, such as many of the architectural representations in book 11, he found “confusing.”²⁸ At this preliminary stage of image analysis, Robertson grapples with how to characterize the intermingling of two artistic idioms, reluctant to render a positive assessment of the in-between-ness of most colonial visual culture. Robertson’s legacy has been profound and multigenerational.²⁹

With the publication of the 1979 facsimile of the Florentine Codex, a companion study of the codex by the Mexican historian José Luis Martínez underscores the “documentary value” of the images.³⁰ Curiously, rather than featuring the vibrant polychrome facsimile images, Martínez incorporates many of the lithographs from Paso y Troncoso’s edition, but in black-and-white copies. Martínez points out what he terms the “*mez-tizo*,” or mixed art, evident in the enduring presence of pre-Hispanic glyphic elements alongside Western artistic traits. The author concludes that the presence of these dual features exhibits the artists’ “confusion” when the *tlacuiloque* negotiate “between two worlds.”³¹ In his discussion of the image of the venerable Toltec capital of Tula, in Book 8, Martínez attributes the artist’s combination of classical colonnade with an indigenous frieze of concentric circles to a misunderstanding (fig. 1.6). By attributing “confusion” as a motivation to painters who combined and reworked the Florentine Codex images, both Martínez and Robertson (who uses the same term) suggest a certain haphazard, even arbitrary process of constructing the

images. Alternatively, and more positively, one can interpret the painter’s quotation, indeed an appropriation, of classical ruins as a complex reenvisioning of Tula, the near-mythological Toltec center of arts and civilization, as a fount of Aztec culture and their own Greco-Roman past. By intentionally juxtaposing the classical ruins with the frieze of disks that characterized high-status Aztec buildings, the Florentine’s painter is not “confused,” but rather conflates two discrete architectural vocabularies and their cultural referents. The *tlacuilo* here, as elsewhere in the Florentine Codex, selectively draws from traditional and European sources to glorify his artistic reputation as an heir to Toltec excellence (referred to broadly as possessing *toltecayotl*, or artanship) and to buttress his status in the colonial present.³²

From the decade of the late 1980s forward, the work in integrating, analyzing, and theorizing the meaning and function of the Florentine Codex images accelerated. This scholarship has coincided with two important developments, the recognition in academia of both pre- and postcontact cultures in the Americas as legitimate fields of study, as well as the acknowledgment of the place of visual culture across the humanities. Images or visual sign systems, from popular to fine arts, are no longer peripheral or merely illustrative to text-based exegesis but play an evidentiary role in their own right in illuminating history and cultural identity. Given this visual turn, two anthologies on the works of Bernardino de Sahagún include chapters that focus squarely on the Florentine Codex images. A section in a 1988 anthology is allocated to illustrations,

FIGURE 1.6. Tollan or Tula. Florentine Codex, Bk. 8, fol. 10v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

with two of the essays providing preliminary overviews of the nature and possible models of the imagery, and three dedicated to the iconography of deity representations.³³ From these foundational studies, scholars began to explore the hybridity of the imagery in greater depth. Four of the five chapters in a second, 2003 anthology, *Sahagún at 500*, track the stylistic and iconographic sources of the Florentine's images to dual legacies, labeling the mixtures as bivisual, the Nahua-Christian dialogue, and a mediation between "two worlds."³⁴ Additionally, Ellen T. Baird and Eloise Quiñones Keber have contributed valuable insights comparing the Florentine Codex and Sahagún's earlier illustrated manuscript, the *Primeros memoriales*, the latter published in facsimile format in 1993.³⁵ In Mexico and Spain, scholarship on the Florentine Codex has been primarily text-based and somewhat skeptical of the value of its paintings; exceptions include the work of Guilhem Olivier, Pablo Escalante Gonzalbo, and Diana Magaloni Kerpel, all of whom fully exploit imagery as primary sources of data.³⁶

In addition to the advances in stylistic and iconographic analysis, a very important recent breakthrough has been the scrupulous examination of the Florentine Codex as a material object, not just a cultural artifact. In particular, Magaloni Kerpel led a team of conservators to conduct a chemical analysis of the pigments utilized by the painters and scribes.³⁷ Their fascinating study concludes that both indigenous and European pigments were deployed, and were done so purposefully. In other words, the same conscious selection that is evident in the choice of subject matter is supported by the very materials used to represent them: in one case, pigments made of flowers render the translucent tones of the celestial spheres, and mineral-based pigments represent the darker and heavier terrestrial realm.³⁸

While science for Magaloni Kerpel's investigation helps elucidate the symbolic meaning of the images through a chemical probe into the pigments, in Molly Bassett's study (chapter 9 of this volume), Western notions of scientific classification need to be put aside in order to facilitate a better understanding of the organizing principles within Nahua epistemologies. Recognizing the value and limitations of our own scholarly apparatus allows us to come closer to the original impulses in the making of the Florentine Codex as a multiauthored project, with indigenous scribe-painters contributing in ways both conscious and self-reflexive. While this brief trajectory of the Floren-

tine Codex scholarship has revealed the increasing weight being given indigenous authorship, in exploring images with relevant texts, scholars are only beginning to see and hear the Nahua voices as they express their own cultural heritage and identity.

"WORTHY OF A KING"

Turning from the evolving scholarship and historical reception of the Florentine Codex's imagery, I now ask what might have motivated Sahagún to plan for such a profusion of illustrations, as well as whether the decision was the Franciscan's alone. By the 1560s printed books were the norm in New Spain, and graphic illustrations provided the most prolific and accessible artistic models. These models were available to Sahagún and his indigenous team in the well-stocked libraries both in the Colegio de Santa Cruz as well as the monastery of Santiago Tlatelolco and other Franciscan libraries.³⁹ Only a few of the illustrated volumes with lavish woodcuts or engravings were not sold off or stolen from the Tlatelolco collection before the late nineteenth century; however, among the 372 books that remain are some with engravings and a substantial number that feature handsome frontispieces and historiated initials.⁴⁰ The "fill-in" floral vignettes and grotesque embellishments visible in the Florentine Codex mimic graphic counterparts, as do the primary or narrative images set apart within single or double black frames.⁴¹ It is possible that the codex was intended to represent an initial step on its way to ultimate publication. Yet the Florentine Codex is also witness to the continuing value of the richly ornamented illuminated manuscript in an age of print. In its retrograde move from machine print to hand-crafted script and with such extravagant expenditures of space and talent lavished on its images, was not the aim to produce a work of art as alluring to the eye as to the reader's mind?

Sahagún's loftiest dream for the Florentine Codex was its imperial destination: to have it travel overseas to the Spanish court. In 1577, the final production year of the codex, Sahagún dedicated Book 6 to fray Rodrigo de Sequera, the Franciscan provincial who fiercely advocated for the completion of the Florentine Codex. In his Latin inscription to Sequera, Sahagún writes: "You have here, observant father, a work worthy of being contemplated by a king."⁴² The worthiness of the work lay not just in the accumulation, organization, and annotation of its data, but also in its aesthetic presentation. Just as the native author

Felipe Guaman Poma de Ayala enhanced his document of Andean culture with 399 lively pen and ink drawings, as his *Nueva corónica y buen gobierno* (1616) was intended for Philip III, so too Sahagún aspired to royal approbation, envisioning his manuscript as beautifully illustrated and thus “worthy of being contemplated by” the Spanish monarch, Philip II.

THE RHETORICAL POWER OF IMAGES

To explain the sheer quantity of the Florentine’s images one also needs to consider the crucial role of visual culture in the mendicant effort to instruct and convert the indigenous populations. In the sixteenth century, images overcame language and ideological barriers; they served pedagogical, devotional, and inspirational functions and, as such, were ubiquitous in the early colonial world, emblazoned on banners, walls, prints, and large painted cloths. Sahagún, like Pedro de Gante, Diego Valadés, Gerónimo de Mendieta, and other fellow Franciscans, was keenly aware of the rhetorical power of visual aids as mnemonic devices and persuasive, didactic tools. Valadés, who was working with large indigenous populations in the primary Franciscan monastery in Mexico City, summed up the need for images in one concise statement, “Since the Indians are lacking in letters, it was necessary to teach them by means of some illustrations,” a policy he famously asserted the Franciscans invented and thus patented.⁴³ Sahagún’s goals for the Florentine Codex were not just to amass linguistic data and record ethnographic information about Aztec life and culture, but also to “reap the Harvest of Souls,” an evangelistic mission furthered by images.⁴⁴

This is not to say that there were not inherent dangers to deploying images among a neophyte population still fragile in its transition from “pagan” to Christian beliefs and practices. During the Reformist movement, a period when images were increasingly suspect as potentially idolatrous, why was Sahagún not more skeptical, or at least cautious, in allowing so many images to inhabit the folios of his manuscript? The tension between the Tridentine edicts’ endorsement of decorous images in Catholic sanctuaries and the potential for idol worship in the Americas is palpable in one of Sahagún’s interpolations in Book 1, “Gods.” In these passages, Sahagún rails against idolatry, emphasizing the materiality of false gods that are only “carvings of stone, carvings of wood, representations [in *teixiptla*], images.”⁴⁵

This tension can be felt in Book 1, where the *tlacuilo* creates two sequential episodes (fig. 1.7). The upper image shows the cutting down of a tree from which a woodcarver on the right can fashion a male effigy using mallet and chisel; this sculpture is referred to as *teixiptla*, a deity representation or surrogate, in the companion Nahuatl text. However, the designation of *teixiptla* shifts to “his god” (*iteouh*, from *teotl*) when the wooden figure is attired in some of the emblems that define the deity Yiacatecuhtli (Lord of the Nose, or Lord of the Vanguard) of the *pochteca*, or long-distance merchants. In the lower image, the now more animated deity is being ritually honored, and three devotees on the right are shown bringing baskets of food, comparable in the postures to the Three Magi.⁴⁶ There are opposing interpretations at play here. From one perspective the artist’s insertion of the biblical kings verges on the sacrilegious, subverting the original Christian intent. From another, the artist has cleverly introduced a Christian motif that elevates the veneration of a pre-Christian god to a more acceptable level. It is interesting that the native painter took care to *visually* identify the deity as Yiacatecuhtli, most importantly with his characteristic “stout cane staff” or traveling stave, with black pyrite and white facial striations, and with his precious breechclout.⁴⁷ The adjacent texts, however, neither mention the deity’s name nor allude to any of these recognizable insignia. The degree of specificity in the image, then, speaks to indigenous, not European, knowledge, anchoring the deity representation within a Nahua pantheon.

While both Latin and Nahuatl texts in this passage in Book 1 castigate the “wretched idolater” who is petitioning and worshipping the completed “idol,” the imagery is both more ambiguous and viscerally expressive, opening up alternate interpretations that simultaneously condemn and condone the depicted behavior. It is in this sense that mimetic representations, figurative images in particular, were considered to be deceitful (*desengaño*). The dangers posed by the blurring of lines between nature and artifice, between the real and the fictive, was sounded by the ancients, including Pliny the Elder.⁴⁸ In his *Natural History*, Pliny critiques (although he privileges) naturalism for the way illusionistic tactics can play tricks on the eye.⁴⁹ Sahagún was well aware of the perils associated with producing image-idols, such as the human effigy of the Nahua deity in figure 1.7. To counter this perfidy, the Franciscan attaches the generic label of *teotl* (god or divinity) to homogenize indigenous deities and deploys anthropomor-

FIGURE 1.7. Top: woodcarver making teixiptla (deity representation); bottom: Yiacatecuhtli (a teotl, or deity) being venerated. Florentine Codex, Bk. 1, fol. 26r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

phism as a way to strip away claims of the gods' powers and emphasize their humanity.⁵⁰

THE TLACUILO TRADITION

My arguments for the plethora of images found in the Florentine Codex have thus far revolved around the assumption that authorial control was vested in Sahagún and that the Florentine Codex was created for a European viewership. As I have mentioned, the Latin interpolations and the Spanish translations can be primarily attributed to the Franciscan. However, it is clear that the well-educated collaborator-grammarians (*gramáticos*) who worked from both oral testimony and pictorial manuscripts helped to shape the Nahuatl narrative. Sahagún himself states that "[t]he Mexicans amended and added many things to the twelve books when they made a clear copy."⁵¹ Among the many voices audible in the codex, were not the indigenous *tlacuiloque* also relatively free agents, participants in the creative process, rather than mere copyists?

That the painters were readily able to appropriate the pictorial ingredients needed in order to convey their message adequately has already been demonstrated (see figs. 1.6 and 1.7). A striking example is also found in Book 8 (see figs. 1.2 and 1.5), discussed in part earlier. To return to this complex image, the *tlacuilo* depicts the three fearsome omens associated with the rule of Motecuhzoma II, whose reign coincided with the demise of the Aztec empire as foretold by the woman who returned from the dead. Stylistically, the image displays indigenous pictographic and, to a lesser degree, European illusionistic traditions. The extraordinary events are splayed across a flat plane and in a centrifugal syntax that rejects spatial illusionism and a linear reading order. Yet traditional motifs, including the song scrolls and the post-and-lintel house, are combined with three-dimensional traits, such as the figures' dynamic poses and the hatching that shadows the folds of their clothing.

Color, too, provides a hermeneutic assist; the brilliant orange and blue-green hues of the speech scrolls convert mere "speech" into wailing from the Serpent Woman's mouth and singing from the building's beam. Similarly, color helps interpret several other puzzling glyphic elements. Six stylized green and blue leaves tumble haphazardly in the interstices between the figures; the free-floating placement of the leaves as well as their prominent

ochre roots (or flames) suggest uprooted (and burning?) plants.

The companion Nahuatl text and its Spanish translation provide a crucial context as they tell us that these omens occurred after two or three years of drought, causing a great famine in central Mexico, perhaps the reason for the female seer's sickness and death.⁵² This information is keyed to our interpretation of the fire represented in the center of figure 1.5. The painter has rendered an image of four yellow-and-orange flames that curl upward and threaten to burn the two leaves positioned horizontally above them.⁵³ In the Nahuatl language and pictorial lexicon, the implications of dry or burnt fields went beyond the devastation of a drought, as the "act of burning the fields" (*tlachinoliztli*) is linked to the concept of warfare.⁵⁴ The idea of war or conquest in Aztec pictography was often represented by paired words, *atl tlachinolli* (water-fire) or *teoatl tlachinolli* (sacred or divine liquid-fire), referencing the sacrificial blood and destruction of warfare.⁵⁵ Among the several Nahuatl references to *atl tlachinolli* in the Florentine Codex, the metaphor "teuatl, tlachinolli" is defined as "[t]he Sea, the Conflagration: This saying was said when there befell a great war, or a great pestilence" (*uei cocoliztli*; emphasis mine).⁵⁶ Huey cocoliztli surely refers, in this context, to the deadly epidemic that was decimating the indigenous population at that moment.⁵⁷ In other words, the hazardous aftermath of conquest extended beyond defeat on the battlefield to the devastation of famine and disease. Ritualized warfare in the cosmological scheme of the Aztec empire was also associated with earth and fire goddesses, in which case the presence of Cihuacoatl, a martial deity, in this omen is conceptually linked and appropriate.⁵⁸ While the burning leaves in figure 1.5 do not resemble the stylized glyphs on Aztec monuments for *atl tlachinolli*, they retain an independent signifying capacity; they also reveal the breadth of the *tlacuilo*'s knowledge in inserting both metonymic and metaphoric signs of uprooted and burning vegetation and his inventiveness in simultaneously evoking drought and the scorched-earth policies of battle. The *tlacuilo* locates the three omens within a perilous time period, a preface to the violence and suffering of the imminent conquest predicted by the omens.

The Nahua pictographic tradition and its practitioners persisted in every aspect of colonial life, in spite of the overwhelming impact of European culture, the medium

of print, and alphabetized writing.⁵⁹ Indeed, the professionals working in the *tlacuilo* tradition continued to paint on many types of surfaces, from paper documents to monumental stuccoed walls.⁶⁰ Without denying that Sahagún appreciated and exploited the didactic power of images, the Franciscan was not the sole impetus for his manuscript's profuse illustrations. The drive to incorporate images must have also emanated from the native artists' priorities.

Evidence for the creative intervention of the indigenous painters can be found in the meaningful manner in which semantic information is incorporated into images that illumine the Nahuatl text. Lisa Sousa's reading of this interplay has uncovered the use of indigenous modes, such as speech and flowers, to express concepts of deviance in Book 10.⁶¹ Moreover, these uniquely Nahua symbols retain some phonetic value. In this sense, a select number of Florentine Codex images exhibit traits of Nahua pictography, a semasiographic system that was basically iconic (resembling what the pictures denote) and with embedded glyphs, some of which were sound based.⁶² Kevin Terraciano (in chapter 3 of this volume) has revealed how feathers served a similar role as cultural symbols, but also to designate the elegance and persuasiveness of certain speeches, an addition that only a Nahuatl-speaking audience would have understood.

In tailoring images for a bicultural audience, I suggest, the artists kept a native readership in mind. Max Harris notes that in the very act of laying hand to paper, of transcribing text or selectively hybridizing images, the ultimate product becomes an "inherently dialogical gamble," a document recording a plurality of voices.⁶³ The highly ritualized acts of writing and painting are foregrounded by Diana Magaloni Kerpel (chapter 10 of this volume), who traces the transmission of knowledge to a divine source, powers she asserts the Florentine's *tlacuiloque* continued to exert.

At the same time, it is also true that the meaning formerly intrinsic to a traditional imagistic sign system was slowly dissipating in the wake of the increasing dominance of the imported alphabetic writing. Elizabeth Boone has remarked on the evolving "dual graphic code" after the conquest, arguing that colonial texts, the Florentine Codex in particular, "completed the bifurcation; it has split and transformed itself into the dual graphic codes of alphabetic script and figural illustration."⁶⁴ While ac-

knowledging that the Florentine Codex is no longer a pristine record of precontact Nahua culture, nor that the pictographic script survived intact, a number of the chapters in this volume counter the notion that the acculturative process was so overwhelming as to erase all traces of the Nahua systems of communication. The highly visible Europeanizations cannot be assumed to be evidence of a capitulation to the Spanish presence.

Ellen Baird (chapter 13 of this volume) also notes how expertly the images can mediate between the two alphabetic texts. Baird deconstructs the fragmented body parts in chapter 27 of Book 10 that resonate with both the lexicon found in the Nahuatl passages and concurrently comment on the tragedy unfolding within the eroding body politic (*república*). This facility underscores the sensitivity of the indigenous *tlacuiloque* to the explicit and implicit meanings of the texts. Performing acts of self-representation, Nahua artists created these dynamic images as a way to preserve the past and to position themselves within a new world order. Moreover, as Barbara Mundy reminds us (chapter 8 of this volume), none of these decisions were made in a vacuum; local circumstances, natural, economic, and political, affected both the indigenous and the European elite who inhabited an often hostile, lacustrine environment. Mundy elucidates the striking images in the Florentine Codex that reveal how the Nahua leadership coped with the ecological challenges and retained an orderly cosmos through their manipulation of water-related rituals.

DOUBLE VISION: TRANSLATING THE SOURCES

In identifying the eclectic sources that inspired the Florentine *tlacuiloque* and how they reworked them, a range of responses can be detected, from direct visual quotes to partial, fragmented paraphrasing. The Florentine's images can be particularly quixotic in their appropriation of varied systems of representation. When their artistic models can be found to be thematically appropriate, we can assume the resemblances were intentional: their meaning can be reasonably linked to their form. Pablo Escalante Gonzalbo demonstrates how artists carefully chose and recast European images that were adapted to the subject matter in dynamic ways.⁶⁵ Although seldom selected at random, images in the Florentine Codex can also appear to be untethered from their sources, as fragments of larger icono-

graphic programs that when reassembled serve purposes that do not immediately reveal their logic.

In Book 6, on rhetoric, and Book 12, on the conquest, there is a seemingly uncomfortable disconnect between some of the earliest Nahua material collected and recorded and the highly Europeanized images that accompany the texts. One plausible explanation points to the chronology of the publication process and its condensed time frame. Books 6 and 12 were two of the last books to be illustrated (almost the entirety of the imagery in these books is only in black and white), and the artists who survived the epidemic of 1576 might have been younger, with greater training in the European canon and less familiarity with the traditional *tlacuilo* vocabulary. Moreover, because the epidemic, in its severity, felled a large percentage of the indigenous population and disrupted the social and economic life of the colony, painters had less recourse to the pigments they needed. Additionally, the subject matter of Books 6 and 12 had no indigenous precedents, and artists were forced to rely on imported sources. In illustrating the *huehuetlatolli* (speech of ancients) in Book 6, the *tlacuiloque* adopted, then refashioned, their images to combine familiar Christian iconography with representations of Tezcatlipoca (Smoking Mirror), the supreme Aztec deity. References to familiar biblical compositions, such as the worshipful crowd below the assumptions of either Jesus or Mary, allowed the artist to sacralize his own past while reimagining the colonial present.⁶⁶

The Florentine Codex forces its modern audience to engage with the coexistence of an indigenous and a European vision, even if the native point of view is notoriously difficult to reconstruct. The critical appraisal of its texts and images requires a “double vision” to appreciate the “combination of connection and separateness” between several perspectives.⁶⁷ The images bridge at least two representational systems, ultimately forging new pictorial statements that adhere to neither one nor the other.⁶⁸ Although the push-pull so evident in the Florentine Codex has been given a variety of names over time—bicultural or bivisual, the product of two cognitive systems; between two worlds; and Indo-Christian or Christian-indigenous—scholars may wish to rethink the utility of these binaries. Instead, it may be more useful to stress the coming together of seemingly discordant elements to convey what the original authors and painters perceived as a coherent perspective from their vantage point in the second half of the sixteenth century in Mexico.⁶⁹ The conceptual and repre-

sentational boundaries between systems of knowledge are so interlocked that it is often difficult to tease out where one begins and the other leaves off; rather, epistemologies overlap and collapse into one another. The authors in this volume have taken steps to further deconstruct the three “texts” of this masterful document without, of course, presuming any degree of completeness.

NOTES

I extend my heartfelt thanks to Kevin Terraciano, coeditor and colleague, whose historical insights and linguistic skills (including many assists to my nascent Nahuatl) immeasurably enhanced this anthology. His even-keeled perspective and good cheer leavened the lengthy process of bringing the volume to publication.

1. Fernando Gallego (ca. 1440–1507), one of Castile’s best-known Hispano-Flemish artists, was likely born in Salamanca. The mural, generally dated to ca. 1485, was described in travel accounts in 1493 and by the German humanist Hieronymus Münzer in 1494–1495. See Martínez Frías 2006, 8–9; B. Anderson 2008, 93, 105.

2. The remnants of Gallego’s fresco (about one third of the original murals) have since been relocated to the Escuelas Menores at the University of Salamanca.

3. On the relationship of the astrological elements in the mural with contemporary science, clocks, and the teaching of astronomy at the university, see Martínez Frías 2006, 12–20, 27–32; B. Anderson 2008, 106–107.

4. On the iconographic sources, see García Avilés 1994, 48–53. See the work of Julius Hyginus (or Higino; 64 BCE–17 CE) first published by Erhard Ratdolt in 1482 as *Poeticon astronomicon*, with engravings by the Florentine Maso Finiguerra (1426–1464).

5. “Videbo celos tuos, opera digitorum tuorum lunam et stellas que tu fundasti” (Psalm 8:3). Also translated as, “When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou hast ordained.”

6. Among the many lacunae in our knowledge of the young Sahagún is his original name prior to taking his Franciscan vows, possibly Bernardino de Rivera. For biographical data on Sahagún between the years 1500 and 1529, see León-Portilla 2002a, 26–70; Bustamante García, 1990, 14–24. The Franciscan historian Gerónimo de Mendieta (1945, 4:114) mentions that Sahagún was a student at the university (“siendo estudiante en Salamanca”). Unfortunately, the University of Salamanca does not have any archival records that predate 1530, and San Francisco de Salamanca was almost totally destroyed by the Napoleonic invasions in the first decade of the nineteenth century. See Bustamante García 1990, 16–17, 20.

7. On Sahagún’s early education, see León-Portilla 2002b, 37–43; Ríos Castaño 2014, 37–62.

8. On the output of printing presses in over twenty-five Spanish towns, or what Kagan calls the “coming of the book,” see Kagan 1974, 35; Dotseth 2008, 119–121.

9. Medina del Campo, geographically near to Salamanca, was one of the busiest of these duty-free art fairs. See Dotseth 2008, 119–120.

10. This comment of Sahagún’s is in his 1585 revised Book 12, in A. Anderson 1982, 37. The count of the Florentine Codex images varies, ranging from a total of 2,463 (1,862 primary and 601 ornamental or border figures; see Peterson 1988, 274) to 2,686 total images (with 1,855

primary or narrative images; in Magaloni Kerpel 2011b, 47). There are three calendrical graphs that may account for some of the discrepancy.

11. Lezra (2015) explores the contingency of translation, both as a practice and as a self-aware form of historiography. On the trustworthiness of recollections of the pre-Hispanic past in a colonial pictorial manuscript, see Leibsohn 2009, 3–4, 93–104.

12. Russo 2014, 7, 32, 223.

13. Thomas 1999, 1. On the fluid, not oppositional, relationship between “text” and “image,” see Elkins 1999, 82–85.

14. Boone 2011b, 197–225.

15. I have suggested that between four and nine artists worked on any one book in the Florentine Codex (Peterson 1988, 274). Magaloni Kerpel (2011b, 52) cites as many as twenty-two artists total. It may be that among a core of seven experienced linguists and scribes/artists, three or four acted as the masters and oversaw the work of other “hands” in what was clearly a very diverse team in both ability and training.

16. On Sahagún’s four named trilingual scholars (*gramáticos*) and three scribes, see Sahagún 1950–1982, introductory vol., prologue to Bk. 2, 54–55. See also Terraciano, introduction to this volume. On the debate surrounding the alleged artist of the Florentine Codex identified as Agustín de la Fuente, see Peterson 2003, 231n21.

17. Including Wigberto Jiménez-Moreno, Miguel León-Portilla, Alfredo López Austin, Charles Dibble and Arthur J. O. Anderson, and James Lockhart, among others.

18. From 1587 until mentioned briefly by bibliographers in 1783, 1793, and again in 1879. The history of the *Historia general* is summarized in Rao 2011, 27–45; Terraciano, introduction to this volume, table I.1. For a comprehensive historical treatment, see Dibble 1982a, 9–23; Bustamante García 1990. See also Rao, chapter 2 of this volume.

19. Eduard Georg Seler (1849–1922) was director of the Ethnographic Museum in Berlin (Museum für Völkerkunde) from 1904 to 1922. For Seler’s biography and bibliography, see Nicholson 1973a, 348–368.

20. This “embargo” lasted for the duration of Paso y Troncoso’s European stay, from 1893 to 1916. Nicholson 1973a, 354.

21. On Paso y Troncoso (1842–1916), see Cline 1973, 391–403, 410.

22. Sahagún 1905–1907.

23. Sahagún 1950–1982.

24. There is partial overlap of these three omens with the eight omens (*tetzauiitl*) described in more detail in Book 8 (fols. 11–13) and Book 12 (fols. 1–3). For a reading of this sixth prophecy as both the end of the Mexica era (the fifth sun) and an apocalyptic event in Christian teleology, see Magaloni Kerpel 2016, 221–228.

25. See also Quiñones Keber 1988b, 200–202, 209–210.

29. Ellen Taylor Baird wrote her dissertation under Robertson on Sahagún’s *Primeros memoriales* (Baird 1993). Elizabeth Hill Boone has extended Robertson’s interest in Mesoamerican pictorial manuscripts and mentored a new generation of scholars.

30. Martínez 1982, section 2, 31–89, is dedicated to the illustrations.

31. Martínez 1982, 55–57, 62, 89.

32. On this image of Tula and its classical models, see Peterson 2003, 246–248. On *toltecayotl*, or artisanship, see León-Portilla 1980; Peterson, forthcoming.

33. See essays by Quiñones Keber, Peterson, and Nicholson, in Klor de Alva, Nicholson, and Quiñones Keber 1988.

34. The relevant chapters in Schwaller 2003 include those by Baird, Boone, Escalante Gonzalbo, Magaloni Kerpel, and Peterson.

35. See, among others, Baird 1988, 1993; Quiñones Keber 1988b, 199–210.

36. For example, in the anthology edited by León-Portilla (2002b), no studies are dedicated to the images. However, see Olivier 2007a; Escalante Gonzalbo 1999, 2003, 2014.

37. Magaloni Kerpel 2011b, 47–76.

38. Magaloni Kerpel 2011b, 73–75.

39. The extant Tlatelolco collection of books originally in the Colegio de Santa Cruz, Santiago Tlatelolco, are now housed in the Sutro Library (so named for the bibliophile Adolph Sutro, who purchased the collection in 1889) at San Francisco State University. See Mathes 1985.

40. For a discussion of similarities between the illustrated volumes in the Sutro collection and the Florentine Codex images, see Peterson 2017.

41. On the relationship of the Florentine Codex to the layout of printed books, see Garone Gravier 2011, 156–197.

42. Sahagún 1979, Bk. 6, preface, facing fol. 1: “Habes hic admodum obseruande pater, opus regio conspectu dignum.”

43. Valadés 1989, 477.

44. “[H]arian grandissimo fruto en las animas”; in Sahagún 1950–1982, introductory vol., prologue to Bk. 10, 76.

45. Sahagún 1950–1982, Bk. 1, 57, fol. 26. These texts, in an appendix in Book 1, include the Latin from the Book of Wisdom (rather than the Spanish) and a parallel Nahuatl text in the right column.

46. See also Escalante Gonzalbo 2003, 178, fig. 8. In some instances the motif of the Three Magi is used appropriately to visualize the bringing of gifts to a mother and child (for example, in Sahagún 1979, Bk. 4, fol. 62v).

47. This image of Yiacatecuhtli is, however, missing several key identifying insignia, such as his columnar hairdo tied with quetzal feathers, bells on his legs, a knotted turquoise cape, and a shield with the stepped fret design, the latter replaced by a fan in figure 1.7. For complete descriptions of Yiacatecuhtli, see Sahagún 1993b, fol. 262r; Sahagún 1979, Bk. 1, fols. unpaginated, 17, 39v; Sahagún 1950–1982, Bk. 1, 41–44, 74.

48. Carey 2003, 106–113.

49. Pliny’s *Natural History* is listed in the 1572 inventory in the Tlatelolco library. Mathes 1985, 30.

50. See Olivier, chapter 7 of this volume.

51. This statement refers to the 1569 “clean” copy of all twelve books of the *Historia general* known as the “Manuscrito de 1569,” whose whereabouts is unknown. Between 1565 and 1568, Sahagún claimed that he alone “examined and reexamined” all his writings. In Sahagún 1950–1982, introductory vol., 14, and the prologue to Bk. 2, 55.

52. There were years during which it did not rain and there was “great suffering,” including *maianaliztli* (*hambre general*, or famine). Sahagún 1979, Bk. 8, fols. 2v–3, 11–13; and 1950–1982, Bk. 8, 17–19.

53. Identical treatment of the tongues of fire are depicted by the same artist in other omens of Book 8 (Sahagún 1979, Bk. 8, fols. 3v, 11v, and 12). Magaloni Kerpel (2016, 227) posits an alternative explanation, interpreting the “tongues of fire” as a celebration of Pentecost, a biblical event that presaged the apocalyptic end.

54. From the root *tlachinolli*, or burnt thing (Molina 1970, pt. 2, 117v).

55. For an analysis of this paired linguistic and visual metaphor, or *difrasismo*, see Quiñones Keber 1989.

56. Sahagún 1950–1982, Bk. 6, 244.

57. For a discussion of the sixteenth-century epidemics in Mexico, variously identified with smallpox, typhus, hemorrhagic fever, and, most recently, salmonella, see Marr and Kiracofe 2000, table 1; Baird, chapter 13 of this volume.

58. On the use of *atl tlachinolli* embedded in the eight Aztec prophecies

as alternating cycles of solar and earthly forces, see Magaloni Kerpel 2016, 82–82, 113–115.

59. On *tlacuiloque*, see Lockhart 1992, 326–331; Boone 2000, 24–27.

60. On *tlacuiloque* as colonial muralists, see Peterson 1993, 46–50.

Eloise Quiñones Keber (1988b, 209) posits that Sahagún recognized the major “role images played in communicating and preserving Aztec culture”; see also chapter 5 of this volume.

61. Lisa Sousa, chapter 12 of this volume.

62. Boone 2011a, 384–386. On semasiographic systems as the triadic interlocking of writing, pictures, and notation, see Elkins 1999, 85–87, 90, 120–142, 143–163. Elkins consigns Aztec sign systems to the status of “pseudowriting,” both limited and defective in recording ideas.

63. Harris 1993, 13–14; Peterson 2003, 224.

64. Boone 2008, 273–274; see also Boone 2011b, 202–206.

65. See Escalante Gonzalbo, chapter 4 of this volume.

66. See fig. 12.7 in this volume, p. 195.

67. Thomas 1999, 5–6.

68. Russo (2014, 244–245, 247) rightly points to the “panoply of referents” in what she labels “mestizo art.”

69. See Leibsohn (2009, 97) on recording the past as an endeavor that is never a “single, crystalline narrative.” I do not suggest that the Florentine’s account of the past is a seamless one, but suturing disparate cultural elements was a way of life for an indigenous individual negotiating a colonial present.

On the Reception of the Florentine Codex

The First Italian Translation

IDA GIOVANNA RAO

FROM “NUEVA ESPAÑA” TO FLORENCE

This chapter presents the first analysis of a little-known and unedited sixteenth-century translation, from Spanish to Italian, of the first volume (Books 1–5) of Bernardino de Sahagún’s *Historia general de las cosas de Nueva España*.¹ The translation dates to the 1580s (ca. 1580–1587) and was likely copied somewhere in or near the city of Rome. From the beginning of the twentieth century it has been preserved at the Hispanic Society of America in New York, as MS B1479.²

Here I offer only a few excerpts from the text, attempting to show the method used by the unknown scribe who wrote this manuscript, MS B1479. Based on my examination, it seems that the translator unquestionably relied on the *varietas* method, creating a translation that tends to be literal. However, the translator also altered the text when necessary to make it more comprehensible in Italian, or adapted it to the more specific objectives of Sahagún’s work. Thus, we are looking at a “fourth text,” considering that the Florentine Codex consists of three original texts: the Nahuatl and Spanish-language texts, and the approximately 2,500 illustrations that embellish its folios, with all their unique cultural implications. The overall meaning of the translation, however, only occasionally changes the substance of the one expressed in the original Mediceo Palatino 218, which is specifically religious in nature. Cardinal Ferdinando I de’ Medici (1549–1609) commissioned a translation of the manuscript after he obtained it, when he was in Rome, and before he became grand duke on October 19, 1587, at the age of thirty-eight.

Cardinal Ferdinando de’ Medici’s objective in commissioning this first Italian translation was to learn about the manuscript and to circulate its content, translated into Italian. The cardinal clearly endorsed the mission of Sahagún’s innovative scholarship. He commissioned its translation while in office, before his dynastic marriage in 1589 to Maria Christina of Lorraine (1565–1637). In fact, Ferdinando, protector of Spanish affairs from 1583, was known to favor the religious orders.³ He was protector of the Friars Minor Observant from 1580.⁴ He was also a patron of the Stamperia Orientale Medicea, established in Rome in 1584 under the auspices of Pope Gregory XIII (1502–1585) to evangelize Muslims and reunite the Eastern Christian churches with the Church of Rome.⁵ For these reasons, I believe that the Italian text of MS B1479 can be considered part of the cardinal’s sweeping political agenda for global evangelization. Indubitably, the Council of Trent (1545–1563) and the spirit of the Counter-Reformation influenced the cardinal’s objectives, but personal motives and a deep intellectual curiosity also encouraged Ferdinando to learn about the customs and religious rituals of an unknown population from the New World.

In this period, the Catholic Church sought to restore and promote a more intense, sincere, and disciplined religious life, made urgent by the spread of the Protestant Reformation. Church leaders sought not only to reform doctrine but also to influence political and military affairs in the global struggle against heresy. Ferdinando became a cardinal in 1563 at the age of thirteen and then went to live in Rome in January of 1569, when the city was steeped in

the cultural climate of the Counter-Reformation. By necessity, the cardinal absorbed the movement's main tenets and went on to distinguish himself for his strict observance of devotional practices. Ferdinando did not enjoy a brilliant career in the papal court; however, he turned out to be a shrewd and sharp observer of international events and of papal politics, an arena in which he acted with remarkable ability but always in the interests of the Medici dynasty. Clear examples of this acumen include his acquisition in Rome of the imposing Villa Medici in 1567, his sponsorship of an expedition to the Amazon, his early curiosity about agricultural development, his superb collection of statues from antiquity (now in the Uffizi Palace), and his collection of books about history and universal and political geography.⁶ He did all this while keeping an eye on innovations of the time, which was why he acquired Sahagún's *Historia general* (General history) on Mexico and the volume *Della descrizione de Paesi Bassi*, or Description of the Netherlands (Antwerp: G. Silvio, 1567), by Lodovico Guicciardini (1521–1589), an excellent primary source for the political history of Belgium and Holland that he acquired in 1583.⁷

The Florentine Codex probably reached Spain through the commissary general of the Franciscan order for Mexico, fray Rodrigo de Sequera (fl. 1575–1585), who left New Spain at the end of January 1580,⁸ taking the work that had been dedicated to him by Sahagún.⁹ Sequera reached Rome by the end of 1587 and from there traveled to Florence as part of the retinue of Ferdinando I de' Medici. The best evidence for this scenario comes from a work titled "Index eorum librorum qui privatim regalibus in aedibus Ferdinandi Medicei S. R. E. Cardinalis et Magni Ducis Etruriæ tertii asservantur," compiled by the librarian Domenico Mellini (fl. 1565–1606) in 1588.¹⁰ I recently found an entry in this work that refers to a codex, which is defined as "De costumi de' Mexicani libri 5," and includes the crucial addition "È traduzione" (it is a translation).¹¹ It is listed among the "Libri volgari scritti in penna" (handwritten books in the vernacular) as no. 1138. At almost the same time, Lia Markey,¹² unaware of Mellini's index, discovered a manuscript at the Hispanic Society of America Library in New York, catalogued as MS B1479, entirely bound in red Moroccan leather with the Medici coat of arms and the cardinal's insignia on the front plate. It contained the very text referred to in the index of 1588, a vernacular (Italian) translation of the Spanish

text of the first five books of Sahagún's work. This translation could have been commissioned only by Ferdinando I de' Medici, who might also have envisaged a translation of the entire Florentine Codex, which was either never completed or is now lost. It is telling that Ferdinando considered the Florentine Codex significant enough to authorize its translation immediately into Italian. The first volume of the work treats religious and cosmological beliefs. Cardinal Ferdinando would have been especially interested in these topics, and no doubt other Church leaders in Rome shared his interest. An earlier translation project resulting in the Codex Vaticanus A (3738), which had been brought to Rome by the mid-1560s, also describes ancient Mexican sacred beliefs and practices in the Italian language.¹³

From these two independent archival discoveries in Mellini's index and the Hispanic Society of America Library, it is reasonable to deduce that the Franciscan Rodrigo de Sequera, or someone in his stead, donated Sahagún's work to the Medici ruler who, as already mentioned, had close ties to the conventual orders. Nevertheless, we cannot rule out the possibility that Sequera wanted to prevent the codex from being confiscated by the Spanish king, Philip II.¹⁴ In 1577, Philip II ordered the confiscation of all writings related to the Indies and Indians, demanding that they be sent to Madrid. Writings describing sacred practices and beliefs, and containing images of the same, ran the risk of being accused of preserving information on "idolatries." The decree reinforced the dictates of the Spanish Inquisition (1478–1834) and the *Index librorum prohibitorum* (1559–1966) of the Supreme Sacred Congregation of the Roman and Universal Inquisition, one of the most important emanations of the Council of Trent. Sequera must have been aware that he was offering the manuscript, instead, to someone who would certainly preserve it and appreciate its highly innovative cultural content. In fact, Ferdinando was so enthusiastic and interested in the manuscript that he immediately ordered the translation of at least the first five books, probably in Rome.¹⁵ Listed in the inventory of his library, this Italian translation somehow ended up in the United States by mysterious means. As a precaution, however, he decided to preserve the three-volume original Florentine Codex elsewhere.¹⁶ The latter is listed neither in Mellini's index nor in the subsequent "Inventario della biblioteca granducale," dated to around 1610.¹⁷

The *Historia general* was inventoried briefly for the first

time in the “Catalogo ragionato e istorico de’ manoscritti della biblioteca imperiale Medicea Lotaringia Palatina”, by the underlibrarian Gaspero Menabuoni, dated 1763–1765, as no. 711.¹⁸ The codex was transferred to the Reale Biblioteca Medicea Laurenziana on June 21, 1783, by the sovereign order of Peter Leopold of Lorraine (1765–1790). It was not until 1793, in the *Catalogus* of Angelo Maria Bandini,¹⁹ prefect since 1757 of the Biblioteca Laurenziana, that we find a printed description of the manuscript, de-

fined as “Historia mexicana libri XII lingua hispanica et mexicana exaratis, tribus voluminibus comprehensa, et innumeris figuris, rudi penicillo, in singulis ferme paginis delineatis exornata, quae ad mores, vivendi rationem, religionem, artes, naturae foetus illarum regionum attinet.”²⁰ Although the Florentine Codex was essentially hidden from public view for yet another century, this earliest of translations into Italian testifies to the high value of its contents for the early guardians of its safekeeping.

A COMPARISON OF THE TWO TEXTS

I present here five excerpts that compare the original Spanish text of the Med. Palat. 218 in the left-hand column with the Italian translation of MS B1479 in the

right-hand column.²¹ Each text is followed by an English translation in the corresponding column.

Excerpt 1

Folio 1r
Prologo

El medico no puede acertadamente aplicar las medeçinas al enfermo que primero conozca: de que humor, o de que causa proçede la enfermedad, de manera que el buen medico conviene sea docto en el conoçimiento de las medeçinas y en el de las enfermedades para aplicar conueniblemente a cada enfermedad la medeçina contraria.

Prologue

A physician cannot properly administer medicines to the patient without first knowing of which humor or from which cause the illness derives. Thus the good physician should be expert in the knowledge of medicines and illnesses to administer appropriately the different medicine for each illness.

Folio 1r
Proemio

Il medico non può sicuramente applicar le medicine all’infermo senza conoscer prima da che humore o da che causa procede l’infermità, di maniera che conviene che sia dotto nel conoscimento delle medicine e del male per applicar convenientemente a ciascuno il suo remedio.

Prologue

A physician cannot prescribe with certainty medicine to the patient without first knowing what humor or what cause produces the illness, and so he should be educated in the knowledge of medicines and illnesses to administer appropriately to each its own remedy.

This passage reveals that the translation follows the text word for word, but with the addition of a few changes intended mainly to improve or modify form or style without affecting content or substance. In fact, the translator uses *proemio* rather than *prologo* in reference to the prologue, because *prologo* in Italian was used normally to introduce more theatrical texts, whereas *proemio* most often precedes a variety of works, such as orations and treatises.²²

The translator eliminates *buen medico* to avoid repetition because the subject is clear. The translator also replaces *enfermedades* with the more generic Italian term *male*, again to avoid repetition. Lastly, he reformulates the Spanish phrase “a cada enfermedad la medicina contraria,” which in Italian becomes less colorful but more incisive with “a ciascuno il suo remedio”—to each its own remedy—underscoring the metonymy *ciascuno* for *enfermedad*.

Excerpt 2

Folio 13r
Libro I. De los dioses

Capitulo primero, que habla, del principal dios: que adoravan y a quien sacrificavan los Mexicanos llamado *Vitzilubuchtli*.

Este dios, llamado *Vitzilubuchtli*, fue otro hercules: el qual fue robustissimo, de grandes fuerças, y muy belicoso: gran destruydor de pueblos, y matador de gentes: en las guerras, era como fuego bivo, muy temeroso a sus contrarios: y assi la devisa que traya, era una cabeça de dragon, muy espantable: que echava fuego, por la boca.

Book 1. Of the gods

First chapter, which speaks of the principal god that the Mexicans worshipped and to whom they sacrificed, called *Huitzilopochtli*.

This god, called *Huitzilopochtli*, was another Hercules, he was very strong, of great strength, and very bellicose. [He was] a great destroyer of villages and killer of peoples. In war he was like a flaming fire, very terrifying to his enemies. And thus the device that he wore was the very frightening head of a dragon, which cast fire from the mouth.

Folio 19r
Libro primo. Delli dei

Capitolo primo, che parla del principal Dio che adoravano et al quale sacrificavano i Mexicani chiamato *Vitzilubuchtli*.

Questo dio, chiamato *Vitzilubuchtli*, fue un altro Hercole, robustissimo, di gran forze, e molto bellicoso, gran destruttore de' popoli et homicida delle genti. Nelle guerre era come fuoco vivo, tremendo à suoi nemici, però l'impresa che portava era una testa di drago di gran spavento, che buttava fuoco per bocca.

First Book. About gods

First chapter, which discusses the principal god that the Mexicans worshipped and to whom they made sacrifices, called *Huitzilopochtli*.

This god, called *Huitzilopochtli*, was another Hercules, very robust, of great strength and very bellicose, a great destroyer of peoples and a killer of persons. In war he was like a hot fire, terrifying to his enemies, and thus the costume he wore was a frightening dragon's head, which cast fire from the mouth.

In this passage the text is translated almost literally; only the repetitive *el qual fue* is eliminated, and *matador*, or killer, is rendered with the pregnant term *homicida*, or murderer, referring specifically to a killer of human beings, although human beings are the objects of both verbs. Whereas the

Spanish *pueblos* (literally “peoples”) most likely refers to villages in the Mexican context, a term adopted in the Americas to refer to communities (especially indigenous *pueblos*), it has no such connotation in the Italian and comes across simply as *popoli*, the plural of people.

Excerpt 3

Folio 66r
Libro segundo, de las fiestas fixas [sic]

Capi. 19
De las fiestas movibles
La primera fiesta movable se celebrava a honrra del sol en el signo que se llama *ce ocelutl*, en la quarta casa que se llama *naolin*:

Folio 72r
Libro secondo, delle feste mobili

Capitolo decimonono
Delle feste mobili
La prima festa mobile si celebrava a honor del sole nel segno chiamato *Ce Ocelutl*, nella quarta casa detta *Naolin*.

En esta fiesta ofrecían a la ymagen del sol codornjzes y incensavan: y en el medio matavan captivos delante della a honrra del sol.
En este mesmo dia se sangravan todos de las orejas, chicos y grandes, a honrra del sol y le ofrecian aquella sangre.

Second book, of fixed feasts [sic]

Chapter 19
Of movable feasts

The first movable feast was celebrated in honor of the sun, in the sign called *ce ocelutl*, in the fourth house which is called Naolin.
In this feast they offered quails to the image of the sun and they burned incense. And in the middle [of the ceremony] they killed captives before it [the image] in honor of the sun.
On this same day everyone, young and old, bled themselves from the ears in honor of the sun, and they offered it [the image] that blood.

Offerivano in questa solennità coturnici all'immagine del sole e la incensavano ammazzando nel mezzo della festa schiavi dinanzi a essa a honor del sole.
In questo medesimo dì ogn'uno, vecchi et giovani, si cavavano sangue dell'orecchie offerendolo al sole.

Second book, of movable feasts

Nineteenth chapter
Of movable feasts

The first movable feast was celebrated in honor of the sun in the sign called *ce ocelutl*, in the fourth house, called Naolin.
In these solemn ceremonies they offered quails to the image of the sun and they burned incense; in the middle of the feast they killed slaves in front of it in honor of the sun.
On this same day, all of them, old and young, bled themselves from the ears in honor of the sun, offering it to the sun.

Here, as well, we can observe only two changes to the original, first by placing *offerivano* (they offered) at the be-

ginning of the sentence and then the postposition of “*si cavavano sangue*,” or “they bled themselves.”

Excerpt 4

Folios 71v–72r
Libro 2

Capitulo 21, de las cerimonias, y sacrificios, que hazian en el segundo mes que se llamava *Tlacaxipeoalitzli*

En esta fiesta, matavan todos los captivos, hombres y mugeres, y niños: antes que los matasen, hazían muchas cerimonias: son las siguientes.

La vigilia de la fiesta, despues de medio dia, començavan, muy solemne areyto: y velavan por toda la noche, los que avían de morir, en la casa que llamavan *calpulco*: aquí los arrancavan los cabellos del medio de la corona de la cabeza: junto al fuego hazían esta cerimonia, esto hazían, a la media noche, quando solían sacar sangre de las orejas, para ofrecer a los dioses: lo qual siempre hazían, a la media noche.

Folio 81r
Libro secondo

Il capitolo 21 tratta delle cerimonie et sacrificiit del secondo mese *Tlacaxipeoalitzli*

In questa festa ammazzavano tutti i captivi, huomini e donne et fanciulli, et prima che li sacrificassero facevano le seguenti cerimonie.

La vigilia della festa, doppo mezzo dì, cominciavano un solenne ballo, vegliando tutta la notte con quelli che dovevano morire nella casa chiamata *Calpulco*, dove li sbarbavano i capelli di mezzo il capo, facendo ciò vicino al fuoco, alla mezza notte, quando solevano cavar sangue dell'orecchie per offerirlo alli dei.

Al alba de la mañana, llevaban los, adonde avían de morir, que era al templo de *Vitzilobuchtli*: allí los matavan, los ministros del templo, de la manera que arriba queda dicho,²³ y a todos los desollavan, y por esto llamavan la fiesta *Tlacaxipealitzli*, que quiere dezir, desollamiento de hombres.

Book 2

Chapter 21, of the ceremonies and sacrifices that they performed in the second month that was called *Tlacaxipealitzli*

On this feast day they killed all the captives, men and women and children. Before they would kill them, they performed many ceremonies. They are the following:

The day before the feast, after midday, they began a very solemn dance. And all night they kept vigil over those who were going to die, in the house that they called *calpulco*. Here they tore out the hair from the middle of the crown of the head. They performed this ceremony next to the fire; this they did at midnight, when they would draw blood from their ears to offer to the gods, which they always did at midnight.

At dawn in the morning they brought them to where they were to die, which was the temple of *Huitzilopochtli*. There the priests of the temple killed them, as mentioned above, and they skinned all of them. And thus they called the feast *Tlacaxipealitzli*, which means “skinning of men.”

La mattina all'alba li conducevano dove havevano da morire, che era il tempio di *Vitzilobuchtli*. Quivi li ministri del tempio gl'ammazzavano nel modo detto di sopra et li scorticavano, et però la festa si chiamava *Tlacaxipealitzli*, che vuol dire scorticamento d'huomini.

Second book

Chapter 21, treats the ceremonies and sacrifices of the second month, *Tlacaxipealitzli*

On this feast day they killed all the captives, men and women and children, and before they would sacrifice them they made the following ceremonies.

The day before the feast, after midday, they began a solemn dance, staying awake all night with the ones who were to die, in a house called *calpulco*, where they removed the hair from the middle of the head, doing that nearby the fire, at midnight, when they would draw blood from their ears which they offered to the gods. In the morning at dawn they brought them to the place where they were to die, which was the temple of *Huitzilopochtli*. There the ministers of the temple killed them as described above, and they skinned them, and thus they called the feast *Tlacaxipealitzli* which means “skinning of men.”

Here, too, the translator intervenes only to delete what he felt was not needed to comprehend the passage, which was clear without the added details of the Spanish text. For example, “las ceremonias y sacrificios que hazían en el segundo mes que se llamava *Tlacaxipealitzli*” (the ceremonies and sacrifices that they performed in the second month that was called *Tlacaxipealitzli*) becomes “cerimonie et sacrificii del secondo mese *Tlacaxipealitzli*” (ceremonies and sacrifices of the second month, *Tlacaxipealitzli*). The passage “hazían muchas ceremonias: son las siguientes” (they performed many ceremonies, they are the following) is simplified to “facevano le seguenti ceri-

monie” (they performed the following ceremonies), and “junto al fuego; hazían esta cerimonia, esto hazían a la media noche” (they performed this ceremony next to the fire; this they did at midnight) is translated as “facendo ciò vicino al fuoco, alla mezza notte” (doing that nearby the fire, at midnight), thereby eliminating the repetition “lo qual siempre hazían a la media noche.” The Italian translator knew Spanish well enough to recognize the word *areyto* (translated as *ballo*), a Taino term borrowed in the Caribbean and used in reference to indigenous dances throughout the Americas in general.

Folio 202r

Libro 3. Del principio de los dioses

Capitulo primero, del principio que tuvieron los dioses

Del principio de los dioses, no ay clara, ni verdadera relacion: ni aun se sabe nada, mas lo que dizen es: que ay un lugar, que se dize *Teutioacan*, y assí, de tiempo inmemorial: todos los dioses, se juntaron y se hablaron diziendo. Quien ha de gobernar y regir el mundo? Quien a de ser sol (y esto ya es platicado, en otra parte).²⁴ y al tiempo que nascio, y salió el sol: todos los dioses murieron, y ninguno quedo dellos; como adelante se dira, en el libro septimo, en el capitulo segundo.

Book 3. Of the beginning of the gods

First chapter, of the beginning that the gods had

As to the beginning of the gods, there is not a clear or true account, nor is anything known beyond what they say: that there is a place called *Teutioacan*, and that in time immemorial all the gods gathered and spoke, saying, "Who is to govern and rule the world? Who is to be the sun?" (and this is already discussed in another part). And at the time when the sun was born and rose, all the gods died, and none of them remained, as it is told ahead in the seventh book, in the second chapter.

Folio 149r

Libro terzo. Dell'origine delli dei

Capitolo primo, del principio ch'ebbero li Dei

Dell'origine degl'idoli non c'è vera relatione, né si sa altro se non quello che per tra(dizion)e degl'antichi si dice qui, cioè ch'in un luogo chiamato *Teutioacan* si adunarono tutti gli dei et la fine di questo loro concilio fu chi di loro havesse a governare il mondo et, come si racconta in altra parte, quando uscì fuori 'l sole ad alluminare 'l mondo, moriron tutti questi dei, come si dice più inanzi nel 7° libro al 2° capitolo.

Third book. On the origin of the gods

First chapter, on the beginning that the gods had

Of the origin of the idols there is no real account, nor is anything known but what is told by ancient tradition, which is: there is a place called *Teutioacan* all of the gods assembled and the purpose of this council of theirs was to determine who was to govern the world and, as it is told elsewhere. When the sun came out to light the world, all these gods died, as it is told further ahead in the 7th book at the 2nd chapter.

Here we see another example of revision, albeit a modest one: the Spanish phrase "ni aun se sabe nada, mas lo que dizen es que ay un lugar" (nor is anything known beyond what they say: that there is a place) is changed to "né si sa altro se non quello che per tra[dizion]e degl'antichi si dice qui, cioè ch'in un luogo" (nor is anything known but what is told by ancient tradition, which is: there is a place). Immediately after this phrase, however, the translator returns to his usual concise and conservative approach; this method is evident in the shift from direct discourse—in which the gods wonder, "Quien ha de gobernar y regir el mundo? Quien a de ser sol?" (Who is to govern and rule the world? Who will be the sun?)—to paraphrasing, whereby he simply reports their words but somewhat ar-

bitrarily reduces two questions to one: "chi di loro havesse a governare il mondo" (who was to govern the world?). Although it is tempting to think that the use of *idoli* (idols) to translate the Spanish *dioses* (gods) suggests a conscious censoring of the manuscript, denying the application of the term *dei* to pagan gods, it is most likely that the choice of words was to avoid repetition, as the term *dei* was used above in the chapter title and elsewhere in the manuscript. Furthermore, the terms *dei* and *idoli* were more or less synonymous for Italian-speaking Catholics in this period.

In conclusion, I think it is quite clear that even these few examples, as noted in my opening lines, reveal that the translator, who was fluent in Spanish and Italian, was always very faithful to the text, simply seeking to improve

its style without altering its content. This was the principal characteristic of a successful Italian translation in this period. And we can also surmise that the translator, commissioned by Cardinal Ferdinando I de' Medici, was a highly educated writer. The translation is distinguished by the prevalence of hypotaxis (the subordination of one clause to another), over the parataxis (the placing of clauses or phrases one after another, without words to indicate coordination or subordination) of the Spanish text, often accompanied by a synthesis that takes some of the color from the immediacy and genuine tone of Sahagún's more popular prose, but that gives the slightly more elaborate Italian translation a stylistic level that verges on artistic prose. Could the sixteenth-century Italian translator and his patron have foreseen that their work would be only the first in a lengthy and ongoing process of scholarly efforts to unravel the multiple texts within the Florentine Codex?

NOTES

1. The Florentine Codex, Mediceo Palatino 218, 219, and 220 in the Biblioteca Medicea Laurenziana. Books 1–5 are in Med. Palat. 218: Mexico, 16th cent. (1576–1577), paper, folios IV, 353, III', 309 × 215 mm. Selected references: Bandini 1791–1793, coll. 454–456; Paso y Troncoso 1896; Sahagún 1950–1982; Sahagún 1979; Sahagún 1989b; Cacho 2001, 2:403–405; Wolf and Connors 2011; Magaloni Kerpel 2011b, 2014; Markey 2011; Rao 2011 (also for analytic description, codex history, and bibliography).

2. New York, Hispanic Society of America, MS B1479: central Italy (Rome?), 16th cent. (1580–1588), paper, 230 fols., 309 × 215 mm. According to direct information from the HSA, the codex was purchased by an art patron and enthusiast of Hispanic studies, Archer Milton

Huntington (1870–1955), who founded the HSA in New York in 1904. Huntington bought it in the 1920s from a London bookshop, G. Michelmores & Co. The work was listed as no. 96 in the bookseller's catalogue, *Choice and Rare Old Books*, now unavailable on the market and also at the HSA, as I have been told. The manuscript contains the *Historia general de las cosas de la Nueva España* without author and title identifiers:

21. The presence of individual witnesses does not pose any problems regarding the choices to be made about the form of the text, which is essentially unchanged. Therefore, my work has been limited to resolving nearly all of the evident abbreviations without using parentheses; placing ambiguous or uncertain abbreviations or letters in parentheses; adding the drafter's interventions in brackets; transcribing the *j* with an *i*, except where it is used for the semivowel sound; distinguishing between *u* and *v*, using the vowel and semivowel sound for the former and the consonant sound for the latter; maintaining the *y* with the value of the simple *i*; and using capitals, small letters, and punctuation according to modern criteria.

Reading between the Lines of Book 12

KEVIN TERRACIANO

The twelfth and final book of the Florentine Codex claims that an unprovoked Spanish massacre of unarmed men and women in the ceremonial plaza of Mexico-Tenochtitlan started a war that destroyed the city. A Nahua artist sketched an image of the violence at the very beginning of the first chapter (fig. 3.1), even though the event does not occur in the narrative until chapter 20, in the middle of Book 12.¹ The Nahuatl text reports that Spaniards ordered Mexica leaders to celebrate the feast day of Toxcatl, and then slaughtered the participants during a ritual dance ceremony, beginning with the drummers. Nahua writers and artists remembered the act as a premeditated mass murder that belied any pretext of a “just war.”

In this chapter, I examine how the most extensive indigenous account of the Spanish-led war on Mexico, and the most extended narrative of any event in the Florentine Codex, reveals very different Spanish and Nahua perspectives of the war, by elaborating on the idea that the manuscript consists of three separate texts: the two alphabetic texts and the images. The three texts—Nahuatl, Spanish, and pictorial—were produced by several men at various stages of the project, begun in the 1550s and completed in the late 1570s. Nahua scholars generated the original Nahuatl text, divided into forty-one chapters, and fray Bernardino de Sahagún was responsible for its translation into Spanish. The expression in this chapter’s title, “reading between the lines,” refers to the act of looking for or discovering meaning that is hidden or implied rather than

explicitly stated. Here I read between the lines of Book 12 to consider how and why the Nahuatl and Spanish texts differ, and especially how content in the Nahuatl has been altered or omitted in the Spanish. In comparing the parallel columns of prose, reading one against the other, I examine the multivalent nature of this rare manuscript and the colonial context in which it was produced.²

In the second part of the chapter, I show how certain images add meaningful content to the narrative that is not articulated in the Nahuatl or Spanish—that is, how the images function as a third text.³ The images are not simply illustrations; they offer evidence that can complement, amplify, contradict, or transcend the alphabetic text, as Diana Magaloni Kerpel has demonstrated.⁴ Although the manuscript betrays the influence of European art style and models, Mesoamerican writing conventions abound.⁵ For example, the *tlacuiloque* (plural of *tlacuilo*, writer/painter) employed “speech scrolls” and hand gestures to indicate conversation, sketched footprints to depict movement from one place to another, and drew toponymic glyphs to refer to places.

The chapter concludes by considering how the Nahuatl narrative contradicts many Spanish accounts of the so-called conquest and how, in retrospect, the authors and artists of Book 12 clearly understood the treacherous nature of the war and its momentous consequences.

DIFFERENCES BETWEEN THE SPANISH AND NAHUATL TEXTS

First, it is important to consider the probable order of the manuscript's composition and the interrelation of its parallel columns of Nahuatl and Spanish texts and images.⁶ The Nahuatl is primary in that it was produced first, although it appears in the right-hand column. Many Church-sponsored texts, such as *doctrinas* and *vocabularios*, are organized in this manner, designed primarily for a Spanish-speaking audience, so that the Spanish appears first as one reads the page from left to right. The Nahuatl seems to be based squarely on oral tradition, as some narratives are prefaced with expressions like "they say that" and "according to what is said."⁷ Considering that Book 12 was first written down in 1555, thirty-four years after the war ended, the men who participated would have remembered much of what they saw and relied on the local oral tradition to fill in what they had not seen. In his prologue to Book 12, Sahagún called it an "account of the very Indians who took part in the conquest."⁸ The Nahua authors

do not refer to having used any previous writings, including pictorial manuscripts, although it is possible that they did so.

The Nahuatl text never refers to the corresponding Spanish, whereas the Spanish sometimes alludes to the Nahuatl. For example, at the end of chapter 19, when the narrative describes the amaranth-dough image of Huitzilopochtli that was made for the feast of Toxcatl, the translation breaks off and concludes, "which are explained in the [Nahuatl] text, as well as other ceremonies that are included throughout this whole chapter."⁹ Finally, neither text refers to the images, which were added last by Nahua artists.

James Lockhart concluded in *We People Here* that Sahagún was responsible for the translation but that Nahuas copied the final version. Sahagún said as much in the prologue to Book 2, where he describes how the Franciscan commissary general fray Rodrigo de Sequera "was very pleased with them [the books of the manuscript] and ordered said author [Sahagún] to translate them [from Nahuatl to Spanish]."¹⁰ Sahagún mentioned three Nahua scribes in particular who copied the entire manuscript: Diego de Grado and Bonifacio Maximiliano of Tlatelolco, and Mateo Severino of Xochimilco.¹¹ Lockhart did not think that the Nahuas who participated in the project "did much direct translation of the Nahuatl" and concluded: "I have little reason to doubt that the Spanish text faithfully represents Sahagún's intentions and views, and even for the most part his phrasing."¹² Since there are so many differences between the Spanish and Nahuatl texts, it is important to analyze the choices that Sahagún made when translating—namely, his "intentions and views." In this first part of the chapter I examine several significant differences between the original Nahuatl and its translation before considering some likely reasons for those differences.

Most apparent is the fact that the translation is much shorter in length than the Nahuatl text. There are 1,330 more lines in the Nahuatl column than in the Spanish. The Nahuatl comprises 4,646 lines of text, whereas the Spanish translation has 3,316 lines—approximately 30 percent less.¹³ All but three of the 160 images in Book 12 are located in the Spanish column, where the translation shares space with or is displaced by images and thus fails to translate all the Nahuatl.

The translation presents information that clearly came from Spanish sources, independent of the Nahuatl origi-

nal. In chapter 2, for example, the translation twice mentions Juan de Grijalva's ship, referring to a previous Spanish expedition to the mainland, but the Nahuatl does not mention Grijalva. In chapter 27, when the Spaniards retreat to Tlaxcala, the translation begins to describe what happened with the phrase, "According to reports of the Spaniards who were there."¹⁴ The Nahuatl text, instead, makes detailed references to the *veintenas*, or twenty-day periods of the Mesoamerican solar calendar. The Spanish concludes: "Captain don Hernando Cortés and those who were with him, having escaped from the war, took courage to outfit themselves again and conquer Mexico back." In contrast, the Nahuatl states that the Mexica hoped that the Spaniards were gone for good and would never return.¹⁵ Here the two texts diverge entirely; the translation provides information that comes from Spanish sources.¹⁶

Similarly, the translation relates many events from a decidedly Spanish perspective. The very title of the book highlights this difference: whereas the Nahuatl refers to "how war was waged here in the *altepetl* [local Nahua community or state] of Mexico," the Spanish refers to "the conquest of New Spain, which is the city of Mexico," striking a victorious tone.¹⁷ In chapter 10, the Spanish relates that "Moteuczoma, considering what he had heard about the Spaniards, as well as the prophesies that had been made in ancient and modern times, that the Spaniards were to rule in this land, left the royal palace and went to his house [where he had lived] before he was king or emperor." The corresponding Nahuatl passage does not refer to prophecy or to Spanish rule; it merely says, "Then Moteuczoma abandoned his patrimonial home, the great palace, and came back to his personal home."¹⁸ Another example of divergent perspectives appears in the following chapter, when the Nahuatl states that the Tlaxcalan lords "gave them [the Spaniards] their daughters," presumably in the hope of making marriage alliances; the Spanish reads, "[T]hey gave them their maiden daughters and they [the Spaniards] received them and *used* them as their women" (my emphasis).¹⁹ The difference in word choice suggests that the Spaniards used them (*usaron dellas*) for labor or sex or both, which is neither stated nor implied in the Nahuatl.

The translation omits information that Sahagún apparently did not consider important.²⁰ In chapter 8, when the Nahuatl text enumerates twenty-five different types of fruits and vegetables that were offered to the Spaniards, the translation refers only to *frutas*. In chapter 15, which

treats the appearance of the Spaniards and their auxiliaries as they march toward Mexico, the translation does not attempt to keep up with the Nahuatl and concludes: "In all the rest of this chapter, nothing is said except the order of the Spaniards and the Indian friends kept when they entered Mexico."²¹ Likewise, in chapter 19, the translation concludes abruptly: "In all this subsequent text, nothing else is said except the way they made the statue of Huitzilopochtli from the dough of various vegetables, how they painted it, how they arranged it, and how afterward they offered many things before it."²² This one sentence refers to nearly five columns (pages) of Nahuatl text. The reference to "nothing else is said" indicates that it was deemed irrelevant, or at least not worthy of translation.

Conversely, the translation is occasionally longer than the corresponding Nahuatl, when it adds detailed information that does not exist in the Nahuatl, as if Sahagún used material that was collected elsewhere. Apparently, he felt a need to add information, although the reason for the need is not always clear. One place where the translation presents information not included in the Nahuatl is the description in chapter 4 of the appurtenances of Quetzalcoatl, Tezcatlipoca, and Tlaloc that the Mexica emissaries gave to Cortés. This information is very detailed; the Spanish, for example, refers to "a gold medallion that they call a[n] *ecacozcatl*" as one of the ornaments associated with Quetzalcoatl's appurtenances.²³ This particular Nahuatl term does not appear even in the Nahuatl text. The Spanish descriptions of the appurtenances of Quetzalcoatl and Tezcatlipoca are approximately twice as long as the original Nahuatl descriptions. Whereas Sahagún decided not to describe the Nahuas' first impressions of the Spaniards on their march to Tenochtitlan, discussed earlier, because a Spanish reader would have known how the Spaniards appeared, perhaps he chose to describe the gods' attire in detail because Spanish readers would not have known this information, and because this type of information fulfilled Sahagún's expressed intent to document idolatrous practices and paraphernalia so that they could be identified and destroyed.²⁴ In reference to the legend of Quetzalcoatl, Sahagún alludes to material in other parts of the manuscript; the translation mentions the belief that Quetzalcoatl would return from the east, where he departed, "as appears in the history of this god," likely referring to the appendix to Book 1 and various chapters in Book 3.²⁵

The Spanish text refers to a transformed urban landscape after the war. Many Nahua place-names are not

translated; instead spaces are identified by new churches or structures, such as a place that is “close to the church called Santa Lucía,” or “next to the church of Concepción,” or “where the houses of Alvarado are today.”²⁶ When Moteuczoma and Cortés meet for the first time, the Nahuatl says that the meeting took place in Huitzillan, which is translated as “the place they call Huitzillan, near the Hospital of La Concepción.” Later Huitzillan is referred to as near the church of San Pablo.²⁷ Thus the Spanish frequently qualifies or substitutes references to sites with the names of new churches or houses that were built on those sites.

Near the end of the book, at the end of chapter 39, when Quauhtemoc went in a boat to surrender to the Spaniards, Sahagún inserted a paragraph in the Spanish column that is not based on the Nahuatl. Calling out this section with the heading “Author,” Sahagún commented that Captain don Hernando Cortés could have destroyed the Mexica many times over, but always showed mercy and gave them as many chances to make peace as possible, so that they would not be completely destroyed. Likewise, the translation before this intervention makes repeated references to Cortés’s efforts to convince Quauhtemoc to surrender, whereas the Nahuatl speaks of how various Mexica rulers gathered to decide how to surrender and how much tribute should be given to the Spaniards. Unlike the Nahua authors, Sahagún sought to protect Cortés from appearing too cruel, despite the violent tenor of the narrative. Sahagún made many interpolations throughout the Florentine Codex, but this one stands out as an obvious attempt to protect Cortés from accusations of brutality.

Finally, a fundamental difference between the Spanish and the Nahuatl is that the translation often tones down Nahuatl passages that present the Spaniards as treacherous, evil, or greedy and tends to omit entire sections of the narrative that might have offended a Spanish audience. For example, when the Nahuatl describes the Spaniards as greedy for gold, they are likened to pigs and monkeys. The passage reads: “And when they had given the things to them, they seemed to smile, to rejoice and be very happy. Like monkeys they grabbed the gold. It was as though their hearts were put to rest, brightened, freshened. For gold was what they greatly thirsted for; they were gluttonous for it, starved for it, piggishly wanting it.” In contrast, the translation reduces this part as follows: “and according to the external signs that the Indians saw in the Span-

iards, it seemed to them that they were pleased and greatly rejoiced over the gold, for they held it in great esteem.”²⁸ Similarly, Nahuatl and Spanish versions of how Moteuczoma’s treasury was sacked reflect very different points of view. In chapter 18, when the Spaniards go to Moteuczoma’s personal home, the Nahuatl calls them “covetous and greedy,” whereas the translation calls them “joyful.”²⁹

The Nahuatl frequently employs a form of the word *payotl*, “treachery” or “something evil,” to modify the verb “kill.”³⁰ The Nahua writers use this term in reference to the unprovoked massacre in Cholula, where the Tlaxcalans have a hand in the treachery but the Spaniards clearly lead the slaughter.³¹ The translation of this episode is actually longer than the Nahuatl text; it acknowledges the attack on unarmed Cholulans but attributes the violence in part to the insulting treatment of the Spaniards, who were not greeted in peace and thus suspected the Cholulans of “treason.” The Spanish concludes: “The Cholulans bore neither offensive or defensive weapons, but went unarmed, thinking that what was done would not be done, so that they died a bad death.” Nothing in this cited passage appears in the Nahuatl.

The Nahua writers employ the word *payotl*, or evil, again in reference to a massacre on the feast day of Toxcatl, when Spaniards attacked unarmed men and women in the ceremonial precinct of Tenochtitlan, when the blood of warriors “ran like water,” when the ground became “slippery with blood.”³² This episode receives very little attention in the Spanish column. Dozens of lines of graphic Nahuatl text detailing the ceremony and subsequent violence go untranslated. Instead, there are numerous (large) images in this section that dominate the Spanish column. Chapters 19 and 20, which document preparations for the Toxcatl feast and the subsequent massacre, contain only a few lines of Spanish. The omission is glaring.

There are many reasons why the Spanish translation might diverge from the original Nahuatl. Sahagún clearly thought that certain passages in the Nahuatl were irrelevant to Spanish readers. He seemed more interested in recording the original Nahuatl language, eliciting as many different words and expressions as possible, than in translating every word and phrase. In the prologue to Book 1, Sahagún explains that his main intention was to lay the foundation for a dictionary of usage, like Ambrosio Calepino had done for Latin; he sought to provide Nahuatl texts akin to those of Virgil and Cicero.³³ He clearly intended to leave space in the Spanish column for images.

Perhaps most important, Sahagún and his team were under pressure to complete the manuscript and probably had to paraphrase and summarize many chapters. Many blank columns on the left-hand side of the page, toward the end of Book 12, where translations or images were to be added, suggest that Sahagún and his colleagues ran out of time to complete this part of the work. Finally, the epidemic of 1576 interrupted the project. Sahagún comments on the devastating effects of disease in Book 11. Writing in Tlatelolco on November 8, 1576, he complained of the plague that continued to rage since August of that year. He lamented the decline of the indigenous population and even feared its extinction.³⁴ Since the images were added last, when Sahagún was translating the Nahuatl text, it is possible that the artists simply ran out of time. We can see that the artists ran out of colors midway through Book 11; only a few images in Book 12 are painted.³⁵

Despite many possible reasons for a divergent or deficient Spanish translation, a close comparison of the two texts suggests that Sahagún made conscious, careful choices about what to include and what to omit in the translation, considering the tone and the content of the Nahuatl and anticipating who might read the Spanish version. He appears to have been concerned with how a Spanish audience would respond to the original text. In the prologue to Book 12, Sahagún attempts to disarm skeptical or suspicious Spanish readers who might object to a Nahua version of the war by claiming that he decided to record a narrative “in the Mexican language, not so much to derive certain truths from the account of the very Indians who took part in the Conquest, as to record the language of warfare and the weapons which the natives used in it, in order that the terms and proper modes of expression for speaking on this subject in the Mexican language can be derived from it.”³⁶ His principal interest in language seems to have tempered any inclination to intervene or change the original Nahuatl text. However, judging by his prologues, his notes to the reader, and his subsequent revision of Book 12 in 1585, Sahagún seems to have realized the controversial potential of the account that he had compiled and preserved.

I will return to the question of Sahagún’s selective translation in this chapter’s conclusion. Now let us examine how the images present a visual, episodic narrative of events, and how they correspond to the alphabetic texts.

IMAGES AS A THIRD TEXT

Most of the images appear to correspond to the Nahuatl text. However, the fact that the Nahuatl of Book 12 was written down first, around 1555, and that the illustrations were drawn about two decades later, most likely by different men, suggests the potential for differences between the alphabetic text and the images.³⁷ At times the *tlacuiloque* added content and meaning to the narrative that are not articulated or emphasized in the Nahuatl or Spanish. For example, one or more of the artists remembered or imagined the Spaniards wearing large feathers on their heads.³⁸ The Nahuatl text refers once to the fact that they wore feathers; a detailed description of Spaniards on the march to Mexico recalls that “plumes stood up, parting and spreading” on the Spaniards’ heads.³⁹ These lush plumes are not the long, straight, tapering quetzal feathers and other types of feathers that the Nahuas wear; they are ostrich feathers from Europe. The artists might have seen ostrich feathers being worn in Mexico, illustrated in books of the Colegio de Santa Cruz library, or depicted in the crests of Spanish coats of arms. In the medieval and early modern European tradition, as in Mesoamerica, wearing feathers on the head signified elite status and military rank. In Book 12, the artists tended to exaggerate the size of the feathers and seem to have attributed special meaning to them. For example, four frames in chapter 20 depict strangely attired, armed Spaniards who wear prominent feathers (figs. 3.2 and 3.3).

I have argued that feathers symbolized power and prestige in Nahua and Mixtec iconographies.⁴⁰ Nahuas associated precious feathers with rulers and warriors.⁴¹ Chapters on the rulers’ dress in Book 8 of the Florentine Codex refer to numerous types of feathers. The most detailed references appear in chapter 12, describing the feathers from the red spoonbill, the quetzal, the blue cotinga, the parrot, the troupial, and the heron that the rulers wore when they went to war. This brief chapter mentions feathers more than sixty times in reference to different articles of clothing and accoutrements associated with the rulers’ warrior outfits. In his *Historia de las Indias de Nueva España*, the Dominican chronicler Diego Durán reported that feathers distinguished “men of [elite] lineage” (*hombres de linaje*) from “low [ranking] men” (*hombres bajos*) in battle. Accomplished warriors of the hereditary nobility wore feathers “from head to foot,” whereas commoners who had distinguished themselves in battle wore animal skins. He concluded that feathers were

FIGURE 3.2. Feathered Spaniards attack Mexica drummers. Florentine Codex, Bk. 12, fol. 33r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

reserved mainly for rulers, nobles, and warriors.⁴² Durán also observes how sending feathers to an enemy signified a declaration of war. He reports how a Tenochca delegation brought feathers to the ruler of Tepeaca so that he might “feather his head” in preparation for war. Likewise, Tla-caelē brought feathers to Azcapotzalco, announcing an impending attack.⁴³ Barbara Mundy examined the significance of feathers for rulers in Mexico-Tenochtitlan, who wore exotic colors from distant conquered provinces and who adorned themselves with the feathers and clothing of specific deities.⁴⁴

Jill Furst links feathers and precious stones to the Nahuatl concept of *tonalli*, the life-giving solar essence, the vitality attributed to humans at birth. All living things receive their *tonalli* from the heat and light of *tonatiuh*, the sun. Nahuas associated feathers with the auspicious destinies, or *tonalli*, of rulers and nobles. Furst found that feathers, gems, and military outfits “carried or outwardly manifested” a warrior’s *tonalli*, which was transferred from captive to captor before the act of sacrifice, and Alessandra Russo elaborates on the connection between feathers, *tonalli*, and Mexica rituals of sacrifice.⁴⁵ Patrick Hajojsky extends the analysis to consider images and objects and ritual acts endowed with *tonalli*, from speech and name glyphs to feathers and divine rulership.⁴⁶

Mexica warriors in Book 12 wear feathers, usually quetzal feathers, on the head or attached to the back, and they bear feathered shields (fig. 3.4). One of the outfits worn by a courageous Mexica warrior, Tzilacatzin, featured a “feather hairpiece or wig, with eagle feathers tied at the back of the neck.”⁴⁷ When Quauhtemotzin exacts revenge on the Xochimilca for attacking Tenochtitlan, he wears a conspicuous feather headdress.⁴⁸ Another brave young warrior wears a *quetzaltecotl* (quetzal-owl) costume that belonged to Quauhtemotzin’s father, Ahuitzotl. He “looked very frightening and splendid,” and when the Spaniards saw him “it was as though a mountain had fallen.”⁴⁹ The feathered warrior penetrated enemy territory in his shimmering outfit, snatched precious feathers and gold from the Spaniards, took prisoners, and eluded capture. The second half of Book 12 is filled with the exploits of Nahuatl heroes who fought bravely against the enemy.

Feathers mark ethnicity in Book 12 in that only Spaniards wear ostrich feathers and only Nahuas wear quetzal feathers. The Spaniards receive quetzal feathers as gifts, but they do not wear them. In chapter 26 the people of Teocallhueyacan offer bundles of precious quetzal feathers as a form of tribute to Cortés, who is seated, holding a lance, wearing plumes of ostrich feathers on his head. In contrast, those who make the offerings are featherless, representing their subordinate status.

In fact, it is likely that Cortés *did* wear feathers when he arrived in Mexico. Bernal Díaz del Castillo remarked that Cortés began to wear a *penacho de plumas* (headdress of feathers) and other signs of distinction after he was chosen by the governor of Cuba to lead an expedition to the mainland, and that he looked like a “gallant and coura-

FIGURE 3.3. Feathered Spaniards in the sacred courtyard of Tenochtitlan, the Teoithualco. Florentine Codex, Bk. 12, fol. 33v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

geous captain.”⁵⁰ Other sixteenth-century sources depict Cortés wearing feathers.⁵¹ The appearance of Cortés and other Spaniards wearing strange feathers on their caps and helmets would have made a distinct impression on the Mexica, considering that they “interpreted everything about the newcomers as some familiar aspect of their own culture,” as Lockhart observed.⁵²

Unlike Europeans, however, the Nahuas also associated precious feathers with a *teotl*—a being or force that possessed awesome power, extreme *tonalli*. Nearly all of the *teteo* (plural of *teotl*) in Book 1 of the Florentine Codex, titled “The Gods,” wear prominent feather head-

dresses and possess feather regalia. The Mexica gave Cortés elaborate outfits with feathers because they thought of him as a *teotl*. Book 12 clearly states that the Mexica greeted Cortés as a *teotl* and attempted to dress him accordingly. In chapter 4, Moteuczoma sent a leader with the title of *teohua* (*teotl* custodian) to greet Cortés and to give him the regalia of four deities, each consisting of many feathers, presenting alternatives for the specific *teotl* that he would embody.⁵³ The *teohua*, a specialist learned in the ritual calendar and sacred offerings, brought the *teutlatquitl* (*teotl* properties), or dress and accoutrements of Quetzalcoatl, Tezcatlipoca, and Tlaloc.⁵⁴ Two of the four

outfits belonged to two different manifestations of Quetzalcoatl. Twice, in chapters 2 and 3, the Nahuatl text associates the Spaniards' appearance with the return of the legendary *teotl* Topiltzin Quetzalcoatl. In the next chapter the messengers attempt to dress up Cortés in the first outfit, and they lay the other three before him (fig. 3.5).⁵⁵ Cortés appears to wear some of the items in the corresponding image, but he continues to sport a European-style cap and ostrich feathers—not the quetzal-feather headdress associated with Quetzalcoatl, despite the fact that the Nahuatl text states the following: “They put on him the turquoise serpent mask attached to the quetzal-feather head fan, to which were fixed, from which hung the green-stone serpent earplugs.”⁵⁶ Nahua sacred practices included deity “impersonators” called *teixiptla*, who would assume the attributes and *tonalli* of a *teotl* when they wore the regalia and accoutrements associated with that *teotl*, embodying and personifying—not simply impersonating—the specific deity. Often the *teixiptla* was offered ritually to the *teotl* as a sacrifice. Bassett considers the act of dressing Cortés in the garb of a *teotl* as a Mexica attempt to prepare him as a *teixiptla* for sacrifice.⁵⁷

The Nahuatl text of Book 12 makes repeated, unambiguous references to Cortés as a *teotl*. Cortés is called “the *teotl*, the captain” (*in teutl in capitan*) and “our lord, the *teotl*” (*in totecui in teutl*), and Spaniards in general are “the *teteo*, the Spaniards” (*in teteu in españoles*).⁵⁸ The Nahuatl text refers to individual Spaniards or the Spaniards as a group *seventeen* times with the word *teotl* or its plural form.⁵⁹ The term occurs throughout the book, including the last chapters. The Spanish column translates each reference as “god” or “gods” but only refers to “god” when *teotl* appears in the original Nahuatl. When Spaniards speak in the dialogue of the Nahuatl narrative, they never refer to themselves as *teotl* or gods or associate themselves with Quetzalcoatl’s return.

As I have argued elsewhere, it is difficult to believe that Nahua men who remembered the war invented or imagined such specific references.⁶⁰ Some of the “elders” who contributed to Book 12 in 1555, who remembered the war, would have been old enough in 1520–1521 to have fought the Spaniards. Sahagún averred in the prologue to Book 12 that this history “was written at a time when those who took part in the very conquest were alive.”⁶¹ Sahagún refers twice in his brief prologue to the fact that the account is informed by witnesses to the war. Thus the claim that indigenous accounts of the war in Tenochtitlan were

FIGURE 3.5. Mexica emissaries offer gifts to Cortés on his ship. Florentine Codex, Bk. 12, fol. 8v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

recorded several generations after the events, described by men who did not witness the events, does not apply to Book 12.⁶²

The Nahua authors of the Nahuatl text of Book 12 used the same term, *teotl*, for deities to whom sacrificial victims were offered during the war: *in teouan catca*, “their former deities,” suggesting that the authors no longer believed in those gods or that it was no longer acceptable

to speak of them in the present tense.⁶³ But the text does not refer to any Nahua person, even the highest-ranking lord, as *teotl*. The term used in reference to the Spaniards is attested in other contemporary Nahuatl sources, such as the Annals of Tlatelolco and the List of Rulers of Tlatelolco. The latter narrative refers to Cortés and the king of Spain as *teotl* and Spaniards as *teteo* thirteen times.⁶⁴ The Annals of Tlatelolco, which dates to the 1540s, employs the term twice in reference to Cortés as “teutl capitan” (*teotl* captain).⁶⁵ The same text also refers to native deities, such as Huitzilopochtli, and images of deities, as *teotl*. In the Codex Aubin, another mid-sixteenth-century Nahuatl source, Moteuczoma refers to Cortés in dialogue as *teotl* and uses the same word in the passage to refer to Huitzilopochtli.⁶⁶

In his study of Book 12 and other Nahua accounts of the conquest, Lockhart concluded that “we are still far from an understanding of the semantic range of the Nahuatl word *teotl*.”⁶⁷ The seminal works of Arild Hvidtfeldt and Richard Townsend, recent books by Molly Bassett and James Maffie, and Guilhem Olivier’s chapter in this volume, to name only a few studies, bring us closer to comprehending the expansive semantic field of the concept, ranging from a sense of the fearsome and transformative to the venerable and divine.⁶⁸ Bassett argues convincingly why and how the concepts of *teotl* and *teixiptla* (“local embodiment”) might have been applied to Cortés and the Spaniards.⁶⁹ A recognition of how frequently Nahua writers applied the word *teotl* to Spaniards in sixteenth-century texts and a systematic analysis of the concept have altered the terms of a debate as to whether Nahuas thought of Spaniards as “gods” in the initial contact period.⁷⁰

In many ways Cortés lives up to Nahua expectations of a fearsome and powerful *teotl* in the narrative of Book 12. In the beginning, in his first encounter with the Mexica, he appears angry and volatile. He is disappointed with the symbolic gifts that the Mexica emissaries offer him. “Is this everything you have by way of greeting?” he asks.⁷¹ Then he frightens the Mexica messengers by tying them up and firing the ship’s cannon, forcing them to lose consciousness—to lose their *tonalli*. He then challenges the messengers to hand-to-hand combat. When they seek to avoid confrontation, Cortés insists that they must fight. He orders his men to feed the messengers so that they will be ready for combat. Cortés appears as a capricious and terrifying *teotl*. But then the fickle *teotl* changes his

mind and sets them free, apparently, as there is no report of a fight, and the messengers hurry back to Tenochtitlan. Throughout the Nahuatl narrative, Cortés seems unrelenting in his thirst for power and wealth. In the very end, when Cortés and his forces have destroyed the city, he is not at all satisfied with the spoils of victory.

This vicious, fearsome side of Cortés and his men sheds light on a passage in another sixteenth-century Nahuatl source, the Annals of Quauhtitlan, which says that people regarded the Spaniards as *teteo* when they saw them because they thought that they were *tlatlacatecollo*, literally “owl-people,” employing a term adopted by the friars for the devil, based on a Nahuatl term for a malevolent creature of the night.⁷² In other words, they called the Spaniards *teteo* because they thought they were devils. The writer then referred to Quetzalcoatl as an example of a devil, making a clear connection between the Spaniards as *teteo* and Nahua deities such as Quetzalcoatl. Finally, the writer recounted, “[L]ater they called them Christians.”

Book 12 contains another detailed description of feathers, also in reference to a *teotl*. In chapter 19, the Mexica create an image of Huitzilopochtli made of corn-amaranth dough for the Toxcatl feast. After shaping the dough into a *teixiptla*, or image of the deity in the form of a person, they place feather down and a hummingbird totem on the head, a feather arrangement called *anecuiutl*, a ball of parrot feathers at the back of his neck, a cloak feathered with eagle down, and a shield feathered with eagle down.⁷³ Huitzilopochtli was associated with the sun, *tonatiuh*, the source of *tonalli*.⁷⁴ Men and women who danced during the feast of Toxcatl wore brightly colored feathers on their arms and legs.⁷⁵

In Book 12, Spaniards wear ostentatious ostrich feathers on their heads, especially when they begin to take control of Mexico, when they seize Moteuczoma and massacre people in the Teoithualco, “the sacred courtyard” in the ceremonial center of the *altepetl*, during the Toxcatl festival (see figs. 3.2 and 3.3). It is highly symbolic that the *teotl*-strangers dominate the Teoithualco. The Spaniard who claps leg irons on Moteuczoma after the outbreak of total war wears a billowing plume of feathers on his head that appears almost as long as his body.⁷⁶ As *tonalli* is associated with the head and hair, giant feathers worn on the head symbolize the heightened expression of one’s *tonalli*.⁷⁷ This conspicuous display of feathers is not described in the alphabetic text (fig. 3.6).

The Florentine Codex artists employed images to con-

FIGURE 3.6. Moteuczoma is bound in leg-irons by a feathered Spaniard. Florentine Codex, Bk. 12, fol. 36r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

vey some ideas that are not articulated in the alphabetic texts. One *tlacuilo* created an armored man wearing a helmet and an iron grid mask who is not described in either the Nahuatl or Spanish. He holds a lance and wears conspicuous feathers. Often, the feathers on his head crowd the top of the bounded frame in which he is drawn. I will call him “Ironman.” Ironman appears for the first time in the visual narrative at a key moment: escorting Moteuczoma to his house arrest (fig. 3.7).⁷⁸ Ironman oversees the stripping of gold from shields and other feathered devices belonging to Moteuczoma’s patrimony, which were taken from the sacred temple part of the palace named Teocalco (“place of the god house”), and then destroys those devices (fig. 3.8). After desecrating the Teocalco, he directs the melting of all the gold, called *teocuitlatl* in Nahuatl, literally “sacred/god excrement.”⁷⁹ Ironman appears front and center when the Mexica lords are ordered to celebrate the Toxcatl festival, and then plays a leading role in the massacre (see fig. 3.3, middle frame).⁸⁰ At one point Ironman falls in battle and appears to have lost his lance and his feathers, if not his *tonalli*.⁸¹ Furst observes that staggering and falling are signs of *tonalli* loss.⁸² As Ironman falls, a Mexica warrior attacks the enemy with a spear or lance, perhaps Ironman’s lance (fig. 3.9). This is one of the few

FIGURE 3.7. First appearance of “Ironman” in the visual narrative, seizing Moteuczoma. Florentine Codex, Bk. 12, fol. 26v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

colored images in the book, and, appropriately, the warrior wears large feathers that are painted a fiery yellow orange. But Ironman soon reappears on a horse, girding himself for war.⁸³ Next, Ironman and a feathered Spaniard throw the corpses of Moteuczoma and Itzquauhtzin, the ruler of Tlatelolco, into the waters of the lake (fig. 3.10).⁸⁴ Thus, Ironman presides over the seizure and death of Moteuczoma and the Toxcatl massacre. And he appears in subsequent images, lancing and killing people during the Spaniards’ retreat from Tenochtitlan.⁸⁵

The Nahuatl text alludes earlier in the narrative to the fact that the Spaniards wore iron, how some of them “came wearing iron all over, turned into iron beings, gleaming, so that they aroused great fear and were seen with fear and dread.”⁸⁶ The Spaniards’ shining armor must have astonished the Nahuas. The depiction of Ironman might refer to a particular Spaniard, or he might represent one artist’s invention of a prototype that personifies the cold, steely side of the invaders. The Nahuatl text introduces a striking phrase soon after Ironman’s first appearance, in reference to the fear and chaos that prevailed among the Mexica when they found out that the Spaniards had looted the palace complex and had seized Moteuczoma: “It was as though a beast were loose, as though it were the deep of night” (*ça iuhquin tequani unca, ça iuhquin tlalli mictoc*).⁸⁷ The “beast” in this Nahuatl phrase is *tequani*, literally “people-eater,” but more accurately a wild beast or

FIGURE 3.8. Ironman oversees the melting of gold from Moteuczoma's Teocalco. Florentine Codex, Bk. 12, fol. 28. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

a cruel, malicious person.⁸⁸ It is the term used in Book 10 to describe the thief who beats and murders people treacherously.⁸⁹ Ironman personifies that deathly beast. He is the only person whose face is covered by a twisted iron mask. He is a scary, faceless, feathered, armored beast who is implicated in the Toxcatl massacre and the assassination of Mexica rulers.

One feathered image in Book 12 stands out as especially symbolic. Chapter 19 relates how Pedro de Alvarado ordered the Mexica to hold the Toxcatl ceremony.⁹⁰ The Spaniard who gives the order, presumably Alvarado, wears large feathers in his hat and bears a lance in a bellicose stance, his forefinger pointed to those whom he commands (fig. 3.11). His speech scroll is attached to a feather. What does the feathered speech scroll signify? The armed Spaniard appears to order three Mexica men to do some-

thing, and they respond by moving in the opposite direction. The subject of the order is revealed in the following frame, when Moteuczoma instructs people to organize the Toxcatl feast, flanked by Ironman and another lance-bearing Spaniard (fig. 3.12).⁹¹ It seems likely that the artist constructed a homonym or logogram based on a Nahuatl word for feather, *ihuitl*, and feast, *ilhuitl*.⁹² The artist drew a subtle sign that perhaps only Nahua eyes would have detected: that the Spaniards instructed the Mexica to celebrate the Toxcatl festival and then ambushed and massacred them. It was an unprovoked act of aggression, the cause of the war. Perhaps the feathered speech scroll also signifies a declaration of war, recalling the symbolic Mexica gesture of sending feathers to enemies whom they intended to attack, recorded by Durán. In any case, the text and images indicate that Spaniards ordered the

FIGURE 3.9. Ironman falls, loses his feathers, and is overtaken by a Mexica warrior. Florentine Codex, Bk. 12, fol. 34. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Mexica to celebrate the feast day, and that the Mexica did not request Alvarado's permission to stage the ceremony as a pretext for rebellion, as many Spanish writers claimed.

UNMISTAKABLE DIFFERENCES

The Nahuatl text and the images in Book 12 diverge in many significant ways from most Spanish accounts of the war. Francisco López de Gómara's history, for example, published in the same decade that the Nahuatl of Book 12 was first recorded, presents a very different view of the Toxcatl massacre and of many other events.⁹³ One significant difference involves the claim that Mexica rebels killed Moteuczoma. When the Spaniards were besieged in Tenochtitlan after the Toxcatl massacre, Cortés com-

manded Moteuczoma to pacify his people; the Mexica *tla-toani* and the ruler of Tlatelolco, Itzquauhtzin, addressed a mob from the roof of the palace. The Nahuatl text of Book 12 states that the rulers were protected and not injured when warriors threw stones and arrows at them. The translation repeats this claim, contradicting many Spanish histories that the rebels mortally wounded Moteuczoma. In the very next chapter, Spaniards throw the corpses of Moteuczoma and Itzquauhtzin into the lake (see fig. 3.10). The translation of this episode is terse. If the Nahua authors did not or could not explicitly say that Spaniards killed their leaders, they claimed instead that the rulers were unharmed and then died suddenly in their captors' custody. Whereas most Spanish writers attributed the war to rebels who committed treason by killing Moteuczoma and thereby rejecting the king of Spain, whose sovereignty the Mexica ruler had accepted, the Nahua authors insist that the Toxcatl massacre was the cause of the war and imply that Spaniards assassinated their leaders soon after the fighting began.

Diana Magaloni Kerpel noted a shift in the chapters dedicated to the war, in which the images are transformed from "clean line drawings" to "shadowy representations."⁹⁴ Toward the end of the manuscript, at least one different artist took over to depict the final battle scenes. The perspective is often aerial and distant; most of the characters are small and nondescript. The last five chapters (fols. 70–87) contain no images.

Almost all the images appear in the Spanish-language column. Lockhart's observation that the images "make up for the difference in length between the Spanish and Nahuatl versions" is especially true for the second half of the book.⁹⁵ Several pages in chapter 20, on the Toxcatl massacre, feature illustrations that are so large that they seem designed to plug gaping holes in the translation, filling up the entire Spanish column (see fig. 3.3, for example, one of many pages in Book 12 with no Spanish translation). Most of the images in Book 12 are in the second half of the work, after the pivotal encounter between Cortés and Moteuczoma in chapter 16. Of the 160 images in chapters 1–36, 116 appear in chapters 16–36. Images seem to substitute for translation when the narrative turns violent in chapter 16, when the Spaniards seize Moteuczoma. The last five chapters (37–41) contain many blank spaces in the Spanish column, including entire pages left blank on the left-hand side, indicating that more images were to be added. Sahagún and his team might have run out of time,

under pressure to complete the manuscript. King Philip II issued a decree in 1577 prohibiting further writings on native history and religion and demanding that all manuscripts on the subject be sent immediately to Madrid.⁹⁶ However, I contend that the content of the narrative is another reason why the Spanish column contains so many blank spaces, lacking translation or image. In the end the Nahuatl prose paints a bleak picture. The desperate Mexica leaders surrender, dressed in ragged, dirty clothes. The Christians brand slaves on the face, carry women off, and sack the city as they search everywhere for gold. The smell of death and destruction fills the air.

The last chapter documents Cortés's insatiable thirst for gold, the Nahua leaders' exasperated reply, and a veiled Mexica plea for the Spaniards to leave Mexico now that they have conquered the city. When Cortés demands more gold, the Mexica lords suggest that the Spaniards

FIGURE 3.10. Ironman and another feathered Spaniard dump Mexica leaders into the lake. Florentine Codex, Bk. 12, fol. 40v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

already took everything. After some confusion, the *cihua-coatl* Tlacotzin responds in paradoxical terms, suggesting that maybe a commoner took it, or maybe a woman hid it under her skirt, and makes half-hearted promises that it will be found someday.⁹⁷ Finally, a leader named Ahueli-toctzin closes the chapter by describing how subject towns used to pay tribute to the Mexica. The last Nahuatl passage of Book 12 reads as follows:

May the lord our lord, the Captain, pay heed. When Moteuczoma was still alive, when there was a conquest

FIGURE 3.11. Spaniard orders Mexica to celebrate the Toxcatl festival, with a feathered speech scroll. Florentine Codex, Bk. 12, fol. 29v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

somewhere, the Mexica, the Tlatelolca, the Tepaneca, and the Acolhuaque all went together. All of us . . . moved together when we went to conquer, but when the [conquered] *altepetl* fell, then everyone came back, each one heading for his own *altepetl*. And afterward came the people of that *altepetl*, the ones conquered, bringing their tribute; they brought green-stone, gold, precious feathers, and other precious stones, turquoise, cotinga and spoonbill feathers, and they came and gave it to Moteuczoma. It arrived all together, all the tribute and gold arrived together in Tenochtitlan.⁹⁸

Ahuelitochtzin seeks to explain how Mexica customs of war and tribute allowed each state time to deliver tribute and to maintain relative autonomy after surrender. His

FIGURE 3.12. Ironman guards Moteuczoma, who commands people to comply with the Spaniards' order to celebrate the Toxcatl festival, before the massacre. Florentine Codex, Bk. 12, fol. 30r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

speech implies that the Spaniards violate these customs by demanding large quantities of gold on the spot, and by occupying the conquered city and using it as their new base of operations instead of returning to their own land. The Spanish translation of this passage conveys the thrust of Ahuelitochtzin's statement, but only the most astute Spanish reader would have comprehended its implications. Conversely, any Nahua who could remember the way things were before the war would have understood Ahuelitochtzin's statement. There was no mistaking the new for the old in this matter. Although the Mexica must have expected to pay tribute to the Spaniards after their defeat, according to their own custom, they could not have anticipated the new terms of payment, or that the Spaniards would occupy their *altepetl* and make it their capital. Ahuelitochtzin's speech suggests that Cortés and his men should leave, and that the Mexica will deliver the tribute to them, as was done in times past. But of course the Spaniards did not leave Mexico, and Book 12 ends abruptly and awkwardly, as if there were little more to say. By the time this account was written down in the mid-sixteenth cen-

tury, the consequences of the war were all too clear. Many things were not like they had been “when Moteuczoma was still alive.”

Although the Spanish translation does not always follow or faithfully reproduce the Nahuatl text of Book 12, especially in the second part of the book, it cannot conceal the violence of the war. Most of the narrative of the Toxcatl massacre is not translated, but its vicious nature is apparent to the Spanish reader nonetheless. Unlike many Spanish histories that interpret the massacre as a preemptive strike to thwart a surreptitious rebellion, the translation of Book 12 simply repeats the Nahuatl assertion that the Spaniards “killed the leaders and warriors treacherously.”⁹⁹ Sahagún himself acknowledges this fact. In the prologue to Book 9, the first book of the third and final volume of the manuscript, he wrote: “In Book 12 the wars when this land was conquered are dealt with as a thing horrible and contrary to human nature.”¹⁰⁰ And in the prologue to Book 1, he compared the war to “the curse that Jeremiah, in the name of God, thundered upon Judea and Jerusalem.”¹⁰¹

If Sahagún did little to alter the Nahuatl text of Book 12, however, he attempted to create another, entirely different version in 1585. He claimed that this later account was designed to correct “certain errors that were made” in the first version.¹⁰² He cast the war in a Christian light and praised Cortés as an instrument of God’s will. This version ends not with Cortés demanding gold, but with the good news of the coming of Jesus Christ. Whereas the Nahuatl text of Book 12 makes no mention of priests, saints, the Christian God, or Christianity in general, Sahagún’s 1585 version abounds with Christian references. Apparently, Sahagún came to realize the problematic nature of the account that he had compiled, or he succumbed to pressure from peers and superiors who might have had access to versions of the manuscript. Sarah Cline concludes that Sahagún’s second version responded to criticisms and debates within his own Franciscan order.¹⁰³

The predictable nature of the 1585 version, written to defend Cortés and Christians from accusations of vice and violence, reinforces the unique value of Book 12. A select group of Nahua men used two graphic systems to record collective memories of the encounter and the war that did not seek favor from the king with claims of service and obedience, as did many other Spanish, mestizo, and indigenous accounts that were crafted to gain some advantage or relief in the colonial system.¹⁰⁴ Reading between

the lines of Book 12 reveals how Nahua writers and artists succeeded in telling their side of the story in their own words and images.

NOTES

1. Sahagún 1979, 3: Bk. 12, fol. 1.
2. Miguel León-Portilla and Ángel María Garibay were the first to recognize the value of the original text, in *Visión de los vencidos* (León-Portilla 1959). This famous work has been reprinted dozens of times in multiple languages. The first English edition, titled *Broken Spears*, was published in 1962.
3. On the idea of the three texts, see Terraciano 2010. On the relation between image and text see Mitchell 1986, 1994. See Boone and Cummins 2012 for a discussion of “text” as a multivalent term applied to Mesoamerican and Andean alphabetic writings, visual images, and objects (esp. 158–159, 449–459). See Peterson 2017 for the application of the term to sixteenth-century Mexican murals.
4. For the most comprehensive study of the images in Book 12, see Magaloni Kerpel 2016.
5. See Magaloni Kerpel 2016, 32; and Peterson 1988, 279–280.
6. Arthur Anderson, Charles Dibble, and James Lockhart have made this study possible by transcribing and translating the Nahuatl text of Book 12 into English. Anderson and Dibble published their translation in 1975, as one of thirteen volumes (Sahagún 1950–1982), and again in 1978. In 1993, Lockhart published transcriptions and translations of both the Nahuatl and the Spanish texts in a volume on Nahuatl accounts of the conquest (Lockhart 1993). Lockhart’s translation of both the Spanish and the Nahuatl texts brought my attention to the many differences between the two. When citing passages from Book 12 in this chapter, I refer to Lockhart’s translation of the alphabetic texts, but I cite a facsimile of the original manuscript (Sahagún 1979) when referring to images and details related to the original manuscript.
7. Lockhart 1993, 82, 128.
8. Sahagún 1950–1982, introductory vol., prologue to Bk. 12, 101.
9. Lockhart 1993, 133.
10. Sahagún 1950–1982, 1:56.
11. Sahagún 1950–1982, 1:55.
12. Lockhart 1993, 37.
13. I counted any new line in the Spanish and Nahuatl columns as a line, even if it contains only one word (or a partial word). I think that the Spanish is comparable to the Nahuatl text in terms of the length required to translate the original. When the translation follows the Nahuatl closely, the length of the two columns is more or less equivalent.
14. Lockhart 1993, 175.
15. Lockhart 1993, 175–176.
16. This is not the only place in the Florentine where the two texts differ entirely in content. Another prominent example of interpolation can be found in Book 11, chapter 13, where the first two sections on maize are replaced with a Spanish discourse on how the animals and foods of New Spain are different from those in Spain and a consideration of whether the Gospel had ever been preached in these regions. These columns neglect to translate two lengthy passages of Nahuatl text. See Sahagún 1950–1982, 1:96–99.
17. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 50–51.
18. Lockhart 1993, 90–91.
19. Lockhart 1993, 92–93.
20. Again, this is true for other books of the Florentine as well. In

Book 9, for example, large sections of the Spanish translation are omitted and were considered unnecessary, as many of the crafts described could still be observed in New Spain, according to Sahagún.

21. Lockhart 1993, 109.
22. Lockhart 1993, 127.
23. Lockhart 1993, 69.
24. At the same time, the detailed description of Huitzilopochtli's amaranth image in chapter 19 is left untranslated.
25. Lockhart 1993, 59; Sahagún 1950–1982, 2:69, and chapters 3, 4, and 12–14 of Book 3.
26. Lockhart 1993, 213, 187.
27. Lockhart 1993, 191.
28. Lockhart 1993, 96–99.
29. Lockhart 1993, 122–123.
30. Karttunen 1992, 204. Often written as *popoyotl*.
31. Lockhart 1993, 94. The term appears in the verb *tlaixpopoiomictli*, “they were treacherously killed,” employing a reduplicative form of the verb *poyo* or *poio*.
32. Lockhart 1993, 134. On p. 140, in the verb *quinpoiomictique*, “they killed them treacherously.”
33. Sahagún 1950–1982, 1:50.
34. Sahagún 1950–1982, 1:94–95, 98–99.
35. See Magaloni Kerpel 2014 for a discussion of the elaborate process and skilled labor required to produce paints that were used in the manuscript, and how the epidemic that began in 1576 must have disrupted that labor-intensive process.
36. Sahagún 1950–1982, introductory vol., prologue to Bk. 12, 101.
37. Magaloni Kerpel concluded that the images in Book 12 “have a visual structure that works independently from the text” (2004, 22).
38. For examples of Spaniards wearing large feathers, see Sahagún 1979, 3: Bk. 12, fols. 23v, 26v, 28, 30, 33, 33v, 36, 39, 40v, 47v.

62. Some historians consider indigenous accounts of the war, written decades after the event, to be influenced by legend formation or myths, especially regarding how the Mexica initially viewed the Spaniards. Many scholars have not understood the timing of the writing of Book 12, however. Matthew Restall (2003, 96), for example, claims that Book 12 was “written down several generations after the events described.”

89. Sahagún 1950–1982, 11:38–39.
90. Sahagún 1979, 3: Bk. 12, fol. 29v. Actually, the Spanish text says Alvarado ordered the Mexica to perform the ceremony, whereas the Nahuatl text does not specify which Spaniard gave the order.
91. Sahagún 1979, 3: Bk. 12, fol. 30.
92. Molina's *Vocabulario* defines “pluma de ave” as *yhuítl* (Molina 1977, 96v, 1st num.) and “fiesta de guardar” as *ylhuítl* (fol. 62v, 1st num.). A single consonant (*l*) distinguishes the two words. On the Nahuatl side (2nd num.) *ilhuitl* is defined as “fiesta de guardar o qualquier día dela semana” (fol. 37v) and *iuítl* is “pluma menuda” (fol. 44). The term for “feast” was also the general term for “day,” as it is today in Huastecan Nahuatl. I thank Bas van Doesburg for suggesting this association between the two words.

The Art of War, the Working Class, and Snowfall

Reflections on the Assimilation of Western Aesthetics

PABLO ESCALANTE GONZALBO

European books and prints were in circulation and used as models throughout the sixteenth century in New Spain.¹ For the writers and artists who produced the Florentine Codex, the use of European printed sources was methodical, comprehensive, and exhaustive. The scholars working with Bernardino de Sahagún were highly educated; they had access to many books in the monastic libraries and also conducted library research in order to structure and enrich the contents of what became the Florentine Codex.² This practice was not the result of mere academic interest, but rather it was an essential part of the education and intercultural dialogue initiated by the friars in the Colegio de Tlatelolco, in the art and crafts schools, and, in general, in the monastic milieu, where Europeans and Indians mutually familiarized each other with their respective cultures.

Previously, I have pointed out the presence of several textual passages, in Spanish and Nahuatl, and among the images in the Florentine Codex, that were inspired by specific printed sources. Sometimes entire books were used as models, and their contents were influential in the construction of complete chapters in the codex; they offered solutions for dozens of illustrations and helped to structure the text.³

Such was the case of the book *Hortus sanitatis*, by Johann von Cube, which was used for the section on the animals in Book 11.⁴ The reliance on such an encyclopedic European work also provided the Nahua contributors to the Florentine project with explanations and points of view from other authors whose work was quoted by Johann von

Cube, such as Aisopos (Aesop), Aristoteles (Aristotle), Plinius (Pliny), San Epifanio, San Isidoro, Avicena, and Albertus Magnus. For example, when the Nahua writers of the Florentine Codex claim that the pelage taken from the forehead, nose, chest, and tail of the *ocelotl* strengthened the men who wore it,⁵ they are most likely following the text in the *Hortus sanitatis*: “leonum virtus est in pectore, firmitas in capite et audaci in caudam” (the power of the lion is on his chest, his strength on the head, and boldness in his tail).⁶ However, it should be kept in mind that even if native informants were following a passage in a European text, the notion that a jaguar (*ocelotl*) had special powers, and that it was possible to acquire those powers by wearing its skin, was also clearly present in Mesoamerican thought. Kings and priests used to wear such garments, and jaguar skins were used to cover royal thrones.⁷ The confluence of meanings of both native and European concepts usually favored the acceptance of European symbols and narratives, seen as familiar and compatible. In fact, compatibility was the first condition in order to develop the syncretic project, which friars set up to link both cultures in contact. Such compatibility has been observed in the analysis of postconquest religion, as well as in art.⁸ The association of themes and images of both traditions is produced on the basis of structural, functional, or symbolic resemblances that might not always be evident.⁹

Likewise, the information in the Florentine Codex about the *ocelotl* who dies with its eyes open¹⁰ must come from Cube, who, speaking of the lion, says, “[D]ormiens apertos habet oculos” (when asleep his eyes are open).¹¹

FIGURE 4.1A. Decoration of altars with plants for the Aztec feast of Teotleco (Arrival of the Gods). Florentine Codex, Bk. 2, fol. 73r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

This analogy between the lion and the *ocelotl* resembles those applied to the case of the rooster, the hen, and the turkey, when illustrated in the codex, following the *Hortus sanitatis*.¹² It makes sense that the turkey and the rooster, as poultry, were seen as equivalent. Two engravings of the *Hortus* represent something like everyday “life scenes” of the chicken family.¹³ One of them is a scene of courtship, in which hen and rooster stand face to face; the other depicts a hen surrounded by her chicks. The artist of the Florentine Codex who illustrated this section made an exact reproduction of the European composition, replacing the chickens with turkeys.¹⁴ As for the text, it is in the Spanish section where the expression “gallinas de esta tierra” (chickens of this land) was written, while the Nahuatl text uses the original name for turkey hen, *totollin*.¹⁵

Another European work that likely also influenced the contents of the Florentine manuscript was Andrea Alciato’s *Emblemata*.¹⁶ We see traces of this book of em-

FIGURE 4.1B. Hermes teaching Odysseus the secret of the moly plant. After an engraving from Andrea Alciato, *Emblems* (Guillermo Rovillio, 1549). Line drawing by Aban Flores.

blems in the chapter dedicated to proverbs, in Book 6 of the Florentine Codex, as well as in several images with an allegorical and moral content. For example, in the chapter dedicated to the feast of Teotleco (Arrival of the Gods) in Book 2, in the preparation for the ritual, the altars were decorated with *acxóyatl*, clusters of bound branches (in clusters of three, either fir or reed, according to the Nahuatl), in order to receive the gods (fig. 4.1a).¹⁷ The artist who illustrated this ceremonial episode must have been instructed by one of the Nahua scholars to use an illustration from Alciato’s book, the one in which the god Hermes comes to Earth into the presence of Odysseus and teaches him the secret of the moly plant (fig. 4.1b).¹⁸ In this comparison, the visual parallels include the waving cape, the joyful movement of bodies, and the figures’ light feet that scarcely touch the ground. The encounter seems like a dance. The Nahua artist adopted the gestural language of the original image.¹⁹

Both episodes, the beginning of the Teotleco feast and the arrival of Hermes in the presence of Odysseus, treat the same basic theme: the descent of gods into the human world. The moly plant seems less relevant, since there is no direct connection between the meaning of the plant

boughs in both narratives: moly is a magic plant, provided with flowers, that was supposed to protect Odysseus from Circe, while *acxóyatl* was a display of branches to be placed as an offering. The breadth of intercultural communication that involves the transfer of classical culture, its rhetoric, and its mental images, has never been sufficiently insisted upon. The Florentine Codex demonstrates, better than any sixteenth-century artwork, how the Christianization of New Spain became a complex process of occidentalization that included the traditions of antiquity and those of the rich medieval and early Renaissance Spanish cultures. Gruzinski also addresses the traumatic nature of this process, the delicate problem of psychic breakdown in indigenous society.²⁰

ORDINARY PEOPLE, WORKERS

The representation of ordinary things, everyday life and labor, became a new subject for native artists in sixteenth-century New Spain. For several Renaissance painters, such as Albrecht Dürer or Pieter Brueghel the Elder, the depiction of working processes, peasants, and ordinary events had been a matter of much interest. But it was probably the publications on various technologies that favored the presence of labor and working people as models for artists in the New World.²¹

Northern European artists of the sixteenth century, such as Hans Holbein the Younger (1497–1543) and Hans Sebald Beham (1500–1550), developed almost a genre of representing peasants (fig. 4.2a). Even biblical scenes by Holbein emphasize aspects of technology and labor, including some compositions that seem to have influenced the Florentine Codex. For example, from the book of Ruth, the image of the young widow who gleaned what barley harvesters had left behind and Boaz (the landowner and future husband of Ruth) was certainly within the grasp of Sahagún's team of painters when they represented harvest scenes. The character kneeling in the scene designed by Hans Holbein is reminiscent of a farmer in Book 4 of the Florentine Codex.²² But it is the figure of Ruth carrying freshly cut barley that shows a greater resemblance to a peasant of the same Book 4. The Nahua peasant in the Florentine embraces a bundle of amaranth.²³

The majority of scenes of labor in Northern European prints evoke collectivities and cooperation. The joyful scenes of monthly feasts in engravings by Beham portray a humble community starving for distraction and

FIGURE 4.2A. Peasant couple. After an engraving by Hans Sebald Beham. Line drawing by Aban Flores.

FIGURE 4.2B. "The Year's End." After an engraving by Hans Sebald Beham. Line drawing by Aban Flores.

catharsis. With steps that appear to be part of a dance, Beham represents peasants in his allegorical treatments of the months of the year (fig. 4.2b).²⁴ Some illustrations in Books 1 through 4 of the Florentine Codex suggest familiarity with Beham's festive compositions. One of them in Book 1 portrays a group of fishermen arriving in the presence of their "patron" god, Opochtli.²⁵ The way in which all the men walk, almost prance, in a compact festive group rather than in a solemn procession strongly evokes the peasants by Beham, especially those in the fifth plate of the series.²⁶

This similarity between festive village scenes by Beham and images in the Florentine Codex is further reinforced in an analysis of representations of a frightened man and a drunkard in the Florentine Codex. The image of a terrified man is part of the explanation of the fortune of the third day sign, *ce mázatl*, or One Deer, in the third chapter of Book 4 (fig. 4.3).²⁷ According to both the Spanish and the Nahuatl texts, *ce mázatl* was a good, propitious sign. However, people born under this sign could be easily frightened, and their constant fears could bring them other calamities; they were vulnerable to thunder and could drown easily when they bathed in water, when their eyes and fingernails could be torn out.²⁸ The Floren-

tine Codex painting in figure 4.3 represents both the state of fear and the risk of drowning in water. The male figure is half submerged in water, and his upper body's pose and gestural language strongly resemble Beham's representation of some peasants, with the man's mouth wide open and his hand emphatically raised (see fig. 4.2a).²⁹

In the fifth chapter of Book 4, the same painter depicted a drunkard when representing the destiny of those born on the day sign *ome tochtli*, Two Rabbit (fig. 4.4).³⁰ In Nahuatl thought, the rabbit was associated with the moon and with the alcoholic beverage called pulque (*octli* in Nahuatl, fermented maguey juice). The day sign *ome tochtli* was disastrous, for they thought that on this date many drunkards were born. Spanish and Nahuatl texts in chapters 4 and 5 of Book 4 describe in detail the behavior of drunkards, who were considered transgressors and were subject to serious punishments, at least among Tezcocan, Mexico, and other Nahua peoples. In the illustration, the artist managed an interesting conflation of sources. Although the Nahua artist borrows the outfit of Dionysus,³¹ a garland draped around his body and a lovely flowered crown on his head, for the gestural language he seems to have followed a composition very close to the representation of peasant festivals by Beham.³² Notice the similarities between the drunkard in the Florentine Codex and the extroverted man in Beham's representation of December festivities (see figs. 4.2b and 4.4).

Some additional elements in the illustration in Book 4 correspond to the written description and some Nahua conceptions and ways of graphically depicting drunkards, like the falling flower, probably referring to the fact that drunkards are prone to shout and sing lustily or are associated with lewd or deviant behavior.³³ Also in figure 4.4, on either side of the drunkard, the open bowl and the jar with the overflowing beverage painted blue, the artist uses glyphic signs for water or liquid that are additional pictorial elements related to the ingestion of pulque in sixteenth-century paintings and codices.³⁴ Whether the patterns of gestural and social interaction that emerge from hundreds of European illustrations are in any way influential on the actual processes of transformation of labor and sociability is a question worthy of further examination.

I will discuss another possible influence of a Beham composition in the Florentine Codex, one that arrived indirectly and rather surprisingly as an illustration in a book on the ethnography of Scandinavia. But before addressing that case, I would like to examine the affinities in Book

FIGURE 4.3. *The fate of someone born on the day ce mázatl, or One Deer. Florentine Codex, Bk. 4, fol. 8v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.*

12 from the Florentine Codex and some European works that might have served as formal and iconographic models.

THE CONQUEST

Book 12 is cosmopolitan and rich in many ways, including its diverse sources. Traces of other books, travel narratives, and histories of warfare can be seen in many of its pages. Some pictorial compositions, such as the lyrical image that adorns the frontispiece (fig. 4.5), seem to integrate elements from different sources. The fleet that passes through the rainbow to arrive at the shore was most probably derived from the popular atlas of the cities of the world known as *Civitates orbis terrarum* (fig. 4.6a).³⁵ Scenes of disembarkation were common in early modern paintings and prints. I have found striking similarities between Book 12's frontispiece and an illustration of a history of the war of Troy, circa 1440, attributed to Konrad von Würzburg (fig. 4.6b).³⁶ In the latter composition, notice the following analogous items: a man wearing a hat who organizes the disembarkation from the ship's deck, the unloading of bundles from the boat, a trunk and a chest (one with a rounded lid and the other flat and angled) already on the shore, and the image of a pig in the lower left corner. However, when one notices similarities with a manuscript whose presence in America is not likely,

one has to assume that there were some copies and engravings that ultimately allowed for the diffusion of a specific composition. It is possible that some images of merchants who are trading goods while sitting next to bundles and piles of grain were also the source for aspects of Book 12's frontispiece. These would include the conversation of an indigenous messenger with doña Marina, the group of sitting Spaniards (one of whom is writing—a letter or inventory?), and especially the small hillock behind them.³⁷

In trying to understand the multiple steps in the artistic process, scholars are still grappling with how and why native artists combined various elements to create the Florentine Codex compositions. Certain war scenes and allegories represented in Book 12 demonstrate the complexity of this creative process.

Several potential models include artworks and prints that were made in the middle of the sixteenth century to celebrate the victories of Emperor Charles against the alliance of Lutheran princes known as the Schmalkaldic League, and more specifically to record the Battle of Mühlberg (1547). An outstanding example is the print by the Italian artist Enea Vico celebrating the crossing of the river Elbe, first printed in Mantua in 1551.³⁸ The group of fusiliers in the Florentine Codex, drawn to represent the display of force made by Cortés before his entry into Tenochtitlan, is notably similar to that of Vico's print.³⁹

Many other passages of that war were drawn and printed in subsequent years. The official chronicle of the war is the *Comentario de la guerra de Alemania hecha por Carlos V, máximo Emperador Romano, Rey de España, en el año de 1546–1547*, written by Luis de Ávila y Zúñiga and printed with many illustrations that seem to be related to the Florentine's Book 12 in several ways.⁴⁰ It is worth noting that scholars and painters of the Florentine Codex were familiar with a wide variety of allegorical and emblematic compositions, and they were also well aware of the exaltation of the Spanish monarch Charles as Holy Roman emperor, king of Jerusalem, and victor of the war against the Protestant league.⁴¹

We do not know which printed version of a copy of the famous 1548 painting by Titian, of Charles V after the Battle of Mühlberg, could have been seen by Mexican painters who developed the composition depicting the entrance of Hernando Cortés into Tenochtitlan (figs. 4.7 and 4.8). But it is difficult to believe that they did not have that royal image in mind when they portrayed Cortés as conqueror in a manner distinct from other representa-

FIGURE 4.5. Frontispiece for Book 12, "The Conquest." Florentine Codex, Bk. 12, unpaginated. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

tions in the codex; notable parallels are his prancing horse and the brilliant helmet as well as Cortés's elegant beard. Beyond the similarities with Titian's composition, it is also striking to notice the allegorical implications of this image. In the Florentine Codex, Charles/Cortés enters Jerusalem/Tenochtitlan, with the crossed, juxtaposed spears creating the powerful Chi-Rho symbol, the labarum of Constantine (☩).⁴² One of the many implications of this association is that Hernando Cortés was an alter ego of the king of Spain and an emulator of Constantine. The identification of Tenochtitlan with Jerusalem helped to reconcile pre-Columbian history with the biblical past, an intellectual maneuver frequently used by native Christians of New Spain who were actively involved in the culture of evangelization. The identification of Tenochtitlan with Jerusalem also established a parallel between the triumph of the Christian empire over the pagan Amerindians, and the desired triumph over the Turks in order to establish a Christian domain in the holy city of Palestine.

Battle scenes in Book 12 are influenced by different sources, such as the 1550 *Comentario* by Ávila y Zúñiga, on the Catholic war against the Schmalkaldic League, mentioned before. Prints and treatises on military strategy, which were abundant in early modern Europe and might have traveled to New Spain, might also have inspired some of the Florentine Codex images. Indeed, part of the *Comentario* is a graphic and written examination of warfare strategies. Such literature on the art of war appears both in books dedicated to that specific matter and in chapters of books of a more general nature.

I turn next to an unusual source that served as an inspiration for the Florentine Codex authors and artists—the *Historia de gentibus septentrionalibus*, written by Olaus Magnus, bishop of Uppsala, Sweden. Two editions were available to Franciscans in Mexico City, one in Latin, printed in 1555 in Rome, and a second edition in Italian, printed in 1565.⁴³ This history of the Scandinavian peoples by Olaus Magnus contains one of the composi-

tions by Hans Sebald Beham mentioned previously, that of Ruth in the harvest at the land of Boaz. The image was copied in Europe, taken out of its biblical context, and used to illustrate the subject of the variety of harvests in Scandinavia within an extensive ethnographical survey of the Northern European peoples. It is likely that the friars brought this treatise, on a culture that was seen as primitive and marginal, as a tool or a model (among many other books), with the express purpose of using it to study and write about the customs of Amerindian peoples. In Europe the work of Olaus Magnus had become an important source for writers and artists trying to represent the “other,” whether human or beast. Certain images taken from the section on war strategy from the *Historia de gentibus septentrionalibus* seem to have inspired compositions in Book 12 of the Florentine Codex.⁴⁴ These influences include the representation of cannons, the illustration of a city under siege by encircling it with scenes of warfare, or images of attacks carried out on water, with cannons supported by large rafts.⁴⁵

In the first pages of Book 12 on the conquest, there is a somewhat bizarre representation of a group of Spaniards seated at a table, allegedly recounting their arrival in Veracruz in 1519 before they traveled to the central highlands (fig. 4.9).⁴⁶ They are receiving food and drink sent to them by the Aztec ruler, Moctezuma II. The composition of the scene, with interior and exterior sections, the table and the architectural setting, the curious hats of the Spaniards, provoke the question of not only what inspired the scholars and painters but also what could have been their ultimate intent when they decided to present this scene.

The Nahuatl narratives that accompany this illustration relate it as follows:⁴⁷ Moctezuma sent Cortés and his entourage a complex embassy of captains, all kinds of priests and sorcerers, slaves and servants. These messengers of the Mexica emperor presented some food to the Spaniards: turkey meat, eggs, and white tortillas. In front of the conquerors, the native priests sacrificed the slaves, dropping their blood over the food until everything was well soaked in blood. They did all this in order to determine whether the Spaniards were gods. According to the Nahuatl text, Moctezuma thought they were gods, took them for gods, and wanted to worship them as such. Accordingly, they were called *teteu ilhujcac vitze*, or “gods who arrived from heaven.” The narrative ends by stating that after the shocking sacrificial episode, the Spaniards dined

on white tortillas and other food, but without blood. Before going back to Mexico, the sorcerers tried to bewitch the conquerors, with no success.

There is a comparable image in the *Historia de gentibus septentrionalibus* in which four men eat and drink at a table inside a room (fig. 4.10). The interior setting and their European dress and hats are similar to the Florentine’s image of Cortés and his companions at the table in Veracruz. The fact that the Florentine Codex painters decided to retain the hats instead of switching them for helmets or other headdresses is probably related to the use of the hat as a mark of rank, which was an attribute of Spanish authorities frequently registered in native-style pictorial manuscripts of the sixteenth century.

It is important to note that the event discussed and depicted in the *Historia de gentibus* passage was directed at the quality of wine in Scandinavia, considered so inferior that they needed to import it from other countries.⁴⁸ In my experience, a print that is chosen as the model for a colonial composition is never used arbitrarily, ignoring its context and original meaning. Quite the opposite, the interest in analogizing Nahua and European cultures was

FIGURE 4.9. Spaniards receive food sent by Moctezuma, consisting of tortillas covered with human blood. Florentine Codex, Bk. 12, fol. 12v (detail). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

FIGURE 4.10. “On the poor quality of wine in Scandinavia and the need to import it.” After a woodcut in *Historia de gentibus septentrionalibus*, by Olaf Magnus (Venice, 1565). Line drawing by Aban Flores.

part of the syncretic process in which indigenous artists and authors carefully considered the contexts and meanings of images that they used as models.

This is how I would explain the use of the print about Scandinavian wine from the *Historia de gentibus* by the Nahua artists of Book 12. The engraving offers an appropriate composition for the theme in a broad sense: a group of European people seated at a table. On the left-hand side of the image, beyond the doorway, a boat is moored at a dock, with a ramp for the unloading of merchandise. It seems that the European engraver tried to divide the composition into two different scenes: the importation of foreign wine, on the left, and its consumption, on the right; but these thematic and chronological divisions might be confused as spatial divisions, as the inside and outside of the same place, which seems to be the way in which Florentine Codex artists interpreted it. In point of fact, the whole episode of the Nahua-Spanish interchange took place by the seashore, in Veracruz. The emphasis in Olaus Magnus’s narrative on the fact that Scandinavian wine was distasteful could have served as a point of comparison with the reaction of the conquistadores to the disgusting meal that was offered to them, bathed in sacrificial blood. Furthermore, it is possible that the neophytes who worked on the Florentine Codex might have associated blood with wine, as in the Eucharist. The Eucharist refers to the Christian ceremony commemorating the Last Supper of Christ, in which bread and wine are consecrated and consumed. The bread and wine are referred to as the

body and the blood of Christ. The native scholars working with Sahagún spent many years figuring out the best ways to translate into Nahuatl and communicate to their fellow indigenous Christians concepts such as transubstantiation. For example, one liturgical verse reads, “[I]n *tlascalli teunacatl omuchiuh: auh in vino, teueztli omuchiuh*” (tortillas became divine flesh and wine became sacred blood), as recorded in Sahagún’s *Psalmody christiana* in the Nahuatl language.⁴⁹

I have proposed several images from the work of Olaus Magnus that might have served as models for the development of the Florentine Codex. One was the scene alluding to Scandinavian crops (itself based on a biblical engraving by Beham), which seems to have informed Sahagún’s artists in their making of the image of the harvest of amaranth, and perhaps other images in Book 4. Another example, from Book 12, is the representation of rafts and cannons, from a chapter on Scandinavian war strategy with instructions to lay siege to a city surrounded by water, which influenced some drawings of the siege of the Mexica capital of Tenochtitlan. It also seems likely that the scene of the sacrificial feast offered to the Spaniards in Veracruz and also found in Book 12 was influenced by an engraving of the *Historia de gentibus septentrionalibus*.

I conclude by referring to another example of the reliance on and adaptation of European printed illustrations by the Florentine Codex painters. This example is especially compelling in that the peculiar composition makes it difficult to think of an alternative source: it is an illustration related to the representation of snow.

SNOWFALL

In the year of *chicome acatl* (Seven Reed), or 1447, there was so much snow that men in the Mexican central highlands died. This disaster is hard to imagine, considering the generally temperate weather in the area, but blizzard conditions are not impossible. Actually, the date perfectly matches one of the first dramatic decreases of temperature in the beginning of the “Little Ice Age.” To represent snow and snowfall, conventions did exist in the pictographic language of Mixteca-Puebla codices, and in conservative or indigenous-style pictorial manuscripts of the 1540s, such as the Codex Telleriano-Remensis, where snow is represented by tiny dots that fill the pictorial field.⁵⁰ And there are even some representations of snow-covered

FIGURE 4.11A. Representation of a cloud and snowflakes. Florentine Codex, Bk. 7, fol. 13r (detail). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

mountains in pre-Columbian manuscripts, such as the Codex Nuttall.⁵¹

In Book 7 of the Florentine Codex, dedicated to “astrology and natural philosophy,” there is a section on ice, snow, and hail. A picture represents the clouds with the color purple, snowdrops underneath, and a group of irregular, almost geometrical shapes that are intended to represent configurations assumed to be snowflakes (fig. 4.11a).⁵² The clouds, the snowfall, and the capricious, geometric shapes of snowflakes in the Florentine manuscript closely resemble those in the illustration used by the editor of Olaus Magnus to represent snowfall, within a long chapter on the harsh weather of Scandinavia (fig. 4.11b).⁵³ Illustrations in Book 7 are characterized by their departure from native visual traditions, since they follow European conventions for representing the sun, the moon, winds, clouds, and stars. Consistent with this pattern, the representation of snowfall moves away from native pictographic formulas as seen in the Codex Telleriano-Remensis and instead follows the European printed model. In doing so,

FIGURE 4.11B. “A cloud and various forms of snowflakes.” After a woodcut from *Historia de gentibus septentrionalibus*, by Olaf Magnus (Venice, 1565). Line drawing by Aban Flores.

the Florentine’s illustration offers a detailed depiction of snowflakes that has no equivalent in the written text. A few Nahuatl sentences describe the snow as a servant of Cetl, the god of frost, and establish that snowfall was a prelude to good harvests. The Spanish text does not elaborate further on the issue.

CONCLUSIONS

The Florentine Codex is a bound book, written in two columns, with numbered pages. It is a type of research book, descriptive and analytical. Hence it belongs to the great bibliographical tradition of the West; it is related to the medieval encyclopedias and to the Renaissance treatises. In addition, the Florentine Codex exhibits detailed knowledge of various European texts. As other scholars have demonstrated, its illustrations show the use of several books printed in Europe between the late fifteenth and the mid-sixteenth centuries. *Emblemata*, by Andrea Alciato, and Johan von Cube’s *Hortus sanitatis* are two works whose influence I uncovered some years ago, both on the texts and

on the images of the Florentine Codex. One can also detect the influence of the *Historia de gentibus septentrionalibus* by Olaus Magnus, based on the evidence in this chapter.

But the Florentine Codex is also a Mexican “códice,” a manuscript produced within the indigenous tradition in which traces of countless compositions, formulas, and symbols of the ancient pictographic repertoire can still be noted. Additionally, the Nahuatl authors’ descriptions and written accounts often come from the indigenous oral tradition, and they are frequently mixed with European sources. For example, Mesoamerican narratives about animals, with all their mythological connotations, coexist with Aesop’s fables in the sixteenth century.

The construction of the visual language of the manuscript is marked by this double identity. Columns, frames, and friezes correspond to the design of medieval illuminated manuscripts and some printed books of the modern era. At the same time, most of the images still show traces of indigenous pictographic conventions and color and design preferences. The presence of the ancient Mesoamerican tradition in the Florentine Codex manuscript and its images is due not only to their makers’ memory but also to the use of various codices that were models and reference sources.⁵⁴ These sources would have included calendrical codices for divination, known as *tonalpohualli* (count of days), screenfolds and long strips of paper recording historical data, tribute records, and genres of which we have only indirect references, such as pictographs for the interpretation of dreams and storage inventories.

The Florentine Codex is a book that contains within itself many other books. In this masterpiece, we can see the interaction of two ancestral traditions. In particular, the images of the Florentine Codex provide a unique field to explore the oscillations of native artists between Western canons of representation and pre-Columbian ways.⁵⁵ We can appreciate the juxtapositions, analogies, and experimental syntheses that constituted the very core of dialogic culture in the first six decades of the colonial era.⁵⁶

39. Sahagún 1979, Bk. 12, fol. 23r.
40. Ávila y Zúñiga 1550.

41. Indigenous people knew about the prestige of Charles V as Christian emperor and his participation in battles. The earliest information we have refers to the theatrical representation or “auto” of the conquest of Jerusalem, held in Tlaxcala in 1538; during the re-creation of the battle, the banner of Charles V was placed on top of a building that represented Jerusalem. This *auto-de-fé* was staged many times throughout the sixteenth century. Escalante Gonzalbo 2001, 82–83. The victorious image of Charles V was also exalted in the obsequies (1554), a project and performance in which native artists and authorities of central Mexico were involved, especially those of the workshop of San José de los Naturales. Native authorities of at least Mexico, Tlaxcala, and Tetzaco were present. Escalante Gonzalbo 2008, 16–17.

42. The emblem of Constantine is composed of an X-shaped character (chi) and a superimposed P-shaped character (rho). Its appearance came at night, before the last battle of Constantine against the army of Maxentius. Lactantius says that “Constantine was warned in a dream to engrave the celestial sign of God on the shield. He put into practice what he had been ordered and, by rotating the letter X with its upper end bent in a circle, he recorded the name of Christ in the shields.” Lactantius 1982, 189–190. See also Cesarea 1994, 28–29. From that time, the emblem of Constantine became the banner of the triumph of the Catholic religion over paganism. Soler Frost 2013, 93.

43. Editors’ note: The Latin 1555 edition was in the Tlatelolco library (currently in the Sutro Library), and the Italian copy published in Venice

made its way to the primary Franciscan monastery in Mexico City (San Francisco de México). Both editions have copious images, with some discrepancies between the woodcuts.

56. An interesting issue that I will address in the future is the fact that many of the “naturalistic” representations in the Florentine Codex, such as those of battles and the court, are ultimately representations of the inexistent, as expressed by Theodor Adorno (2004, 22, 30) in reference to Mannerist art. Thus, the forces of oscillation occur within that “interior territory” where reality expresses itself sublimated.

PART II

LORDS ROYAL AND SACRED

THIS PAGE INTENTIONALLY LEFT BLANK

Surviving Conquest

Depicting Aztec Deities in Sahagún's Historia

ELOISE QUIÑONES KEBER

The developmental stages of the encyclopedic compilation of contact-period Nahua culture, early if variously cited as the *Historia general* [universal] de las cosas de Nueva España,¹ remarkably survive in voluminous drafts and revisions. Among these are two illustrated manuscripts that can be regarded as final clean copies produced about twenty years apart, titled in more recent times the *Primeros memoriales* and the Florentine Codex. In Bernardino de Sahagún's narrative of the origin and trajectory of the overall *Historia* project,² written in Spanish in the prologues that precede each book of the Florentine Codex, modifications and informational gaps are apparent.³ These observations have drawn attention to the project's evolving contents, successive reorganizations, and excision of previously planned sections. Also pertinent to this study is Sahagún's failure to mention any painters involved in the production of the *Historia*'s final manuscripts or the planning of any images for them.

My subject focuses on a particular facet of these changes: the shifting delineation of Aztec deities in the *Primeros memoriales* and the Florentine Codex.⁴ I begin by examining the prologues to bring to the fore the reworking of the *Historia* material in relation to indigenous images. Next, I analyze the differing representations of the deities as they appear in the images and texts of the two manuscripts to assess the alterations that occurred from one to the other.⁵ I also speculate on why the Florentine Codex contained such a profusion of images, who might

have painted them, and why. I conclude with a proposal about the impact of Tlatelolco and Tenochtitlan–Mexico City on the final iteration of the *Historia* project and its images and artists.

Indigenous religion, with its numerous deities and their associated rituals, understandably drew the attention of missionaries because of their evangelical mission to eradicate idolatry in New Spain. Pursuing information about such subjects at the very time that deity images were being destroyed as idolatrous was a risky undertaking that calls for an explanation today as it did in the sixteenth century. This contentious subject continues to attract the attention of present-day scholars who probe the various aspects of indigenous religion and its manifold connections with the salient aspects of Nahua culture.⁶

A brief comparison of those sections devoted to indigenous religion reveals the expansion of material from the *Primeros memoriales* to the Florentine Codex.⁷ "Rituals and Gods" is the title of the first of the four chapters of the *Primeros memoriales*, which contrasts with Books 1 ("The Gods"), 2 ("The Ceremonies"), 3 ("The Origin of the Gods"), and 4 and 5 ("The Soothsayers and the Omens") that comprise the first five of the twelve books of the Florentine Codex.⁸ Moreover, as Guilhem Olivier points out,⁹ the gods also appear throughout the other books, a ubiquity that no doubt corresponded to their pivotal roles in the everyday life of the inhabitants of Aztec Mexico.

WHAT DO THE PROLOGUES REVEAL ABOUT THE HISTORIA PROJECT AND NATIVE PICTORIAL SOURCES?

The prologues to the first two books of the Florentine Codex emerge as the foremost sources for learning about the *Historia* project. It is here that Sahagún articulates his rationale for undertaking the venture, based on his dismay that idolatry persisted in Mexico after decades of evangelization. He believed that it could not be effectively eradicated and durably replaced by Christianity unless his fellow missionaries could recognize the extent of its religious expressions.¹⁰ At the same time, as a missionary dedicated to the extirpation of idolatrous practices, Sahagún was obliged to deal with these matters judiciously, for such a perilous project demanded forceful oversight. At times it drew censure in royal, pontifical, and ecclesiastical pronouncements from the Vatican, Spain, and New Spain, and closer to home from fellow Franciscans.

As has long been recognized, the prologues provide critical details about the innovative research procedures Sahagún inaugurated in the town of Tepepulco with the indispensable assistance of his team of indigenous collaborators.¹¹ First among them were named Acolhua elders and leaders, who undoubtedly had received an intensive education in the local pre-Hispanic *calmecac*, the school that had educated elite males. These survivors of the conquest preserved an unparalleled knowledge about their culture, a deep familiarity with the pictorial and oral traditions that encoded it, and a unique store of personal experiences and memories that straddled critical years from the ancient preconquest order through the turmoil of the conquest to a negotiated postconquest existence under foreign domination.

Their partners in processing the data collected were highly educated and multilingual former students, again identified, of the *colegio* that adjoined the Franciscan *convento* of Santiago Tlatelolco.¹² As scholars and denizens of two worlds, these collegians served as bicultural intermediaries by recording the information the elders supplied in pictures and in added verbal explanations, thus preserving their knowledge in the transliterated form of written Nahuatl. Scribes, also named, wrote the final texts for the clean copy of this research, now called the *Primeros memoriales*.¹³ It is thus surprising that neither painters nor the included images are mentioned,¹⁴ yet this manuscript contains an already sizable 545 images, while the later Florentine Codex would boast an extraordinary 1,855.¹⁵

Thus, while the prologues offer a starting point for probing the question of what use was made of native pictorial materials, nothing is said about how the elicited pictorial sources were preserved in the final form of either manuscript. This omission challenges us to search out a rationale for the overwhelming number of images that ultimately appeared in the two clean copies and the possible identities of the anonymous artists who painted them.

Prologue to Book 1, "The Gods"

In the prologue to Book 1, Sahagún relates that in 1569 a "clean copy" of twelve books included only a completed Nahuatl column and a completed grammar and vocabulary that were part of an appendix that was later discarded in the subsequent Florentine Codex.¹⁶ Two planned columns, a Spanish translation of the Nahuatl text and a scholia (glossary) were also omitted and would never be produced.¹⁷ The contents of this now lost "clean copy" were thus still in flux, with no indication of an intent to include images. About a decade later, a bilingual version called the Enríquez manuscript, sent to Spain in 1578 and now lost, also lacked any reference to images.¹⁸ A brief mention of images appears only retrospectively in 1585 in Sahagún's reference to a well-illustrated manuscript sent to Spain in 1580, generally considered to be the Florentine Codex.¹⁹

A rare passage in this prologue does, however, report the survival of "ancient paintings" that told of the fabled city of Tula.²⁰ This pre-Hispanic manuscript might have been a local relic, for Tula and Tepepulco are located in the same vicinity. What Sahagún's statement indicates is that not only were preconquest manuscript paintings still in existence about 1560, but the friar recognized their value as historical sources.

One of Sahagún's interpolations, this one negatively referring to native pictography, appears in an appendix to Book 1. Directly addressing native peoples, he deploras the confusion and idolatry found in their ancient picture writings and in images of the gods made of stone, wood, and gold. Even as he praises the indigenous painters' "marvelous" representations, he expresses regret that they, too, led to the worship of idols.²¹

Prologue to Book 2, "The Ceremonies"

A well-known passage in the prologue to Book 2 supplies additional information about the way the Tepepulco elders conveyed their knowledge, for here Sahagún specifies that

all topics were obtained from “pictures” because that was “the writing” used in ancient times.²² The *colegio*-trained assistants then placed the elders’ additional verbal explanations below the paintings.²³ His words indicate that the “pictures” were likely native manuscripts, parts of them, or copies thereof. It is also possible that the assistants themselves drew images based on verbal descriptions supplied by the elders. This valuable passage indicates that a combination of ancient paintings, oral tradition, and the recall of trained memories produced the information obtained in Tepepulco, but it does not specify how it was pictorially incorporated into the final manuscript.

Prologue to Book 3, “The Origin of the Gods”

In the short prologues to Books 3 through 5, Sahagún changes his focus to their contents. Ambitiously titled “The Origin of the Gods,” Book 3 treats only three male gods, Huitzilopochtli, Tezcatlipoca, and Quetzalcoatl, and the birth of only the first, with information likely deriving from the narratives of mythic or legendary tales that had been preserved in oral tradition.²⁴ Because passages in Book 3 shed some light on the use of pictorial sources, they are also briefly considered here.

Chapter 1 tells the story of Huitzilopochtli, accompanied by four narrative scenes. Three vignettes depict him in his full traditional attire and one in abbreviated array; two relate to his mythical birth, while two others show what appears to be an *ixiptla* (a deity’s human embodiment or “impersonator”) or a priest of his cult. Here Huitzilopochtli’s figure is based on his image in Book 1 of the Florentine Codex with slight modifications, which itself was copied from the *Primeros memoriales* with modifications. A short chapter 2 relates episodes from the story of Tezcatlipoca (called here Titlacaun, among other names), with only one vignette showing an *ixiptla* of the god being honored, which bears no resemblance to his image in Book 1. The remaining chapters of Book 3 provide a lengthy narrative about Quetzalcoatl that likely stemmed from the same “ancient paintings” about the Toltecs of Tula mentioned in the first prologue. They feature eleven scenes, three showing Quetzalcoatl in the attire of the god in Book 1, a modified copy of his *Primeros memoriales* image.

The pictorial vignettes that first appear in chapter 2 of the *Primeros memoriales* (as discussed later in this chapter) represent postconquest inventions of the Florentine Codex artists, since this type of depiction does not occur in preconquest Aztec pictography. Stylistically, they also

reflect compositional adaptations derived from European sources, such as readily available paintings and prints in New Spain, or, as noted, they might also have been based on verbal descriptions.

The saga of Quetzalcoatl appears again in the prologue to Book 8, “Kings and Lords,” and Book 10, “The People.”²⁵ The Quetzalcoatl-related Tula paintings thus present a rare and remarkable example of how a single pictorial source was likely used for both images and texts in several books of the Florentine Codex. They provide evidence that a type of manuscript dealing with episodes in the myth or legend of a personage, here Quetzalcoatl, existed in pre-Hispanic times and would have been utilized as mnemonic springboards for recitations or dramatizations of his exploits, or practices related to his cult. López Austin additionally proposes that other sources for the three gods might have been based on song, stories, or other literary forms that the elders would have learned in the *calmecac*.²⁶

Prologue to Book 4, “The Soothsayers”

In the prologue to Book 4, Sahagún condemns the astrology of ancient Mexico as “a necromantic craft or a pact and invention of the devil.”²⁷ He avoids using the term *tonalamatl* (book of days), although Book 4’s contents clearly derived from a native *tonalamatl*, a pictorial arrangement of the 260 days of the *tonalpohualli* (count of days) that in central Mexico took the form of twenty thirteen-day periods (*trecenas* in Spanish).²⁸ Considered a diviner’s almanac or handbook, its purpose was to align an individual’s activities with the will of the gods by determining the most favorable day on which to undertake a particular action (e.g., birth, marriage, travel, war, agriculture). Each *trecena* panel contained numerous images that embodied potent divinatory forces for that period. These included thirteen numbered day signs, whose combination reflected their dual mantic energy; one or two deity “patrons,” whose large size in each panel reflected the immense divinatory power they exerted over that period; thirteen rotating “day lords”; nine rotating “night lords”; and a rotating series of flying creatures with their own influence. Since the twenty day signs changed with each *trecena*, so did the pictorial components of each of the following days.

The diviner’s challenging task of calculating a final prognostication for a particular day therefore consisted of weighing the changing mantic charges of that day’s multiple images. Since depicting ancient deities and other

supernaturals as part of a divinatory practice would have placed the *tonalamatl* in the realm of idolatry, Sahagún chose to treat this perilous subject in Books 4 and 5 very cautiously. By obliterating the *tonalamatl*'s many visual divinatory components, Sahagún avoided dealing with the thorny subject of soothsaying. Instead, he drastically shrank the myriad individual images to only one type, a calendrical day sign, using it to foretell a newborn's attributes, with its destiny based on the day and hour of its birth, and its name. These were bestowed as part of a cleansing and naming ritual painted in newly composed vignettes.²⁹ He thus reconceived the native ceremony as one that resembled Christian baptism and could be utilized for evangelical purposes. In the appendix of Book 4 this radically reductive view appears in two charts that display only the 260 days of the *tonalpohualli*.³⁰ As the *tonalamatl* was the only type of pre-Hispanic manuscript to feature a systematic array of fully attired deities, avoidance of its images also eliminated the only available pre-Hispanic pictorial source for depicting a sizable group of Aztec deities in the postconquest period.³¹

COMPARING DEPICTIONS OF AZTEC DEITIES IN THE PRIMEROS MEMORIALES AND THE FLORENTINE CODEX

Primeros Memoriales, Chapter 1, "Rituals and Gods"

Chapter 1 of the *Primeros memoriales*, "Rituals and Gods," contains the manuscript's most concentrated treatment of these subjects in two well-illustrated paragraphs. Paragraph 2A, on festivities of the gods, correlates with the Florentine Codex's Book 2, "The Ceremonies"; and paragraph 5A, detailing how the gods were arrayed, correlates with the Florentine's Book 1, "The Gods." The *Primeros memoriales* thus prioritizes ritual, which occupies most of the fourteen paragraphs of the first chapter. This arrangement indicates that the gathering of information commenced by first considering the overall structure of the intricately organized Aztec ceremonial system within which the deities played a prescribed part. Their ceremonial roles appear in paragraph 2A (paragraph 1 is missing), in the annual cycle of eighteen lavish public ceremonies of twenty days each (*veintenas* in Spanish) that involved a broad spectrum of activities throughout the year, with each one dedicated to specific deities. Because treating all

the deities involved would encompass a volume of its own, for comparative purposes I focus on only one, the preeminent maize goddess Chicomecoatl (Seven Serpent).

Primeros Memoriales, the Feast of Hueytozotli, and the Maize Gods

The standardized format used for the eighteen festivities of the gods economically shows two quasi columns that pair a Nahuatl description with a selection of the many activities that took place during each period. Figure 5.1 shows one of the three folios that display the *veintenas*, with the uppermost framed scene on the right pictorializing and the text on the left describing the major events of Hueytozotli (the Great Vigil) that honored the maize gods. At the top left of the framed image, a quadrangular enclosure represents a maize field, within which a seated figure holding a maize stalk and a rubber-spattered banner typical of rain gods faces three *tlaloque* (minor rain god figures), here abbreviated to only heads. Below are two small temples, one containing food offerings. At the top right, four females join hands in a celebratory dance, while below them, two other females walk toward a large temple festooned at the top with a maize stalk and several cobs. One female bears a maize stalk on her back, while the other, an *ixiptla* of a female maize goddess, with face, arms, and legs painted red, holds double maize cobs. To their right, two priests, their bodies painted black and one holding a sacrificial knife, also approach the temple, where the repeated image of the *ixiptla* of the maize deity meets her sacrificial fate, as indicated by a blood-smeared costume.

The short Nahuatl text describes Hueytozotli as a celebration of the maize plant that was also called the "Taking of the God of Maize."³² It relates that in maize fields everywhere people took stalks of maize home to make offerings. On the following day, maidens carried the maize cobs on their backs and deposited them in the temple of Chicomecoatl, also called the place of Centeotl (Maize Cob Lord), a male maize deity.

From the viewpoint of the elders of Tepepulco who described this feast, this *veintena* celebrated the maize cycle of this basic staple as critical to the sustenance of the community, with three maize gods associated with different developmental stages of the plant. The corner field recalls the beneficent effect of the rain god Tlaloc and his assistants on the ripening maize. The populace then participated by detaching tender green stalks and honoring them in their homes. Maize cobs deposited in the temple

of Chicomecoatl were placed under the efficacious care of the male maize god Centeotl, who oversaw the drying out of the kernels that would in turn become seeds to be resown in the maize field. The two female *ixiptla* figures likely represent the young maize goddess Xilonen (from *xilotl*, or tender ear of green maize), who is the first sacrificed, while Chicomecoatl, the goddess of the mature maize plant, awaits her own sacrifice at the appropriate time. Jiménez Moreno viewed the event primarily as a celebration of the green stalk of the tender maize, which culminated in the sacrifice of Xilonen.³³

If, as some scholars hold, depictions of the *veintena* cycle were not painted in native manuscripts but were a postconquest invention, the gathering of information from the memories of the Tepepulco elders would have played a significant role in the novel depictions created for the *Primeros memoriales*. In their youth the elders would likely have observed or even participated in the many events, and would have retained vivid memories from which they drew their verbal descriptions. The *Primeros memoriales* artists would thus have devised a new type of ritual depiction to match the narrated events, the aforementioned vignettes, and the collegians for their part would have recalled European sources that featured complex multifigural compositions arranged within a framed pictorial stage.

Primeros Memoriales, Paragraph 2B, The Feast of Atamalqualiztli

This following paragraph represents another type of ceremony, the exuberant feast of Atamalqualiztli (Eating of Water Tamales) (fig. 5.2), which also informs us about the depiction of deities. It commemorates the completion of an eight-year Venus cycle and shows a rare example of an assembly of deity impersonators costumed in the attire of several gods, among them Chicomecoatl. It occupies one of only two full-page paintings in the manuscript, accompanied by a long, detailed description. The pictorial and textual attention to the feast no doubt reflects its importance to the Tepepulco community and the abundant information provided verbally by the elders. Atamalqualiztli included dancing, processions, and food offerings, highlighted by the consumption of maize in a variety of differently seasoned tamales. The religious context of the lively celebration is emphasized by items shown along the central axis of the scene: a temple pyramid at the top; below it, a stepped platform in a temple courtyard; and beneath that, a large flowering maize plant. The costumes of the

gods scattered across the picture plane later reappear in the individual deity depictions of paragraph 5A. Chicomecoatl, at the lower right, can be recognized by the two red maize cobs she carries and the red facial coloration typical of fertility deities. In contrast, the populace appears in inventive costumes of birds, flying insects, and other picturesque disguises. This festive scene is also significant for informing us that individuals who ritually impersonated the gods wore accurate replicas of their attire on ceremonial occasions, as further indicated in the next section.

Primeros Memoriales, Paragraph 4, Those Who Served in the Temples

This paragraph is important for the light it sheds on the multiple duties carried out by priests of various gods, such as the teaching and performing of songs. It is especially informative about the costume items, ritual objects, component events, and materials (paint, food, drink, offerings, birds, flowers) that the priests had to obtain and prepare. The detailed itemization of ceremonial props indicates the exhaustive arrangements that preceded any ritual performance. While Chicomecoatl's priest is not mentioned, that of Centeotl/Xilonen is, with responsibilities "to see to, to order that there be gathered together the papers, copal, rubber, and powdered sweet-scented marigold that were required at the time of the festival to Xilonen."³⁴ Like the itemization of deity outfits in the Atamalqualiztli feast discussed in paragraph 2B, this paragraph demonstrates how lists of ritual items committed to memory could be readily recalled. It is likely that the Tepepulco elders relied on such memorized lists in answering queries about deities, their attire, and their rituals, and it was this type of verbal information that aided the *Primeros memoriales* artists in fashioning their depictions.

Primeros Memoriales, Paragraph 5A, How Each of the Gods Was Arrayed

Like paragraph 2B, paragraph 5A presents a similarly well-organized and consistently maintained format for the appearance of individual gods, with a focus on their characteristic attire and accoutrements (fig. 5.3). The layout of images on the right with corresponding texts on the left again reflects the way the information was obtained from the elders. Here, the deity figures, twenty-four male and twelve female, in addition to small molded-dough figures of the five *tepicoton* mountain gods associated with the rain god Tlaloc, are carefully delineated in a some-

FIGURE 5.2. Feast of Atamalqualiztli. Lower right, Chicomecoatl. *Primeros memoriales*, fol. 254r. Códice Matritense del Palacio Real de Madrid. © Patrimonio Nacional, España.

what rustic indigenous style with unwavering attention to their visual appearance.³⁵ Painted deity figures did not appear as isolated figures in preconquest native manuscripts. Their detached forms in the *Primeros memoriales* thus give little hint of the active roles they played in indigenous religion and ritual and appear to be another innovation of the manuscript's artists. It may also reflect the influence of Christian depictions of individual sacred figures, such as saints who could be identified by their attire and traditional symbols, as seen in imported printed books and the sculptures and paintings displayed in churches.³⁶

Primeros Memoriales, Chicomecoatl in the Images and Texts of Paragraph 5A

In figure 5.3 (top), Chicomecoatl's placement as the first of the female deities signifies her importance in Tepepulco as the major deity of the Mesoamerican staple of maize. She is doubly identified by the alphabetic gloss of her written name inserted above her as well as by the maize cobs she holds aloft that already serve as markers of her identity and role in maintaining human sustenance and survival, as already noted in the Atamalqualiztli painting (see fig. 5.2). The color red predominates in her face painting, attire, and insignia, as it does for Xilonen. Often associated with fertility deities, red alludes to the ritual sacrifice undergone by female maize deities who symbolically made it

FIGURE 5.3. *How the gods were attired.* Top right, Chicomecoatl. *Primeros memoriales*, fol. 262r. Códice Matritense del Palacio Real de Madrid. © Patrimonio Nacional, España.

possible for the maize plant and other cultigens to be agriculturally reborn.

The text to Chicomecoatl's left is precisely rendered in Nahuatl script, and her name appears again in the title of the text, which reads in English translation:

THE ARRAY OF CHICOMECOATL

Her face is painted ochre red.
 Her paper crown is on her head.
 Her green stone necklace.
 She is wearing her shift with the evening primrose design, [and] her skirt with the evening primrose design.
 On her legs are small bells, pear-shaped bells.

Her lordly sandals.

Her shield is the shield with the sun symbol design.

Her double maize ears are in her other hand.³⁷

Essentially, the text is a formulaic listing of the individual components of Chicomecoatl's accoutrements, from top to bottom, with one line allotted to each item, although the greenstone necklace and small bells are missing in the painting. This pairing demonstrates the closely maintained relationship between image and text here and in the manuscript as a whole. But while the mention of maize ears alludes to the goddess's sphere of influence, the limited text gives little indication of her significance in religious ideology, mythic narrative, or the sacrificial ritual in

which her *ixiptla* played a major role in guaranteeing the reappearance of a new maize crop.

The fact that the Tepepulco elders provided local pictorial sources or copies of them, or that the drawings might have been based on verbal descriptions, may account for the somewhat rustic and static delineations of the deity. López Austin also suggests that the rigidity of the language in the Nahuatl itemization may indicate that the Tlatelolco informants were repeating phrases learned by rote in the *calmecac*.³⁸

Primeros Memoriales, Paragraph 10, Things Attributed to the Gods

This paragraph also details characteristics of twenty-three of the thirty-six gods depicted in paragraph 5A. For Chicomecoatl, it relates that she is the one who makes things sprout, makes things green, and preserves them, and thus extends her godly domain in the human sphere to providing sustenance in general, beyond that of maize.³⁹

Primeros Memoriales, Paragraph 14, Songs of the Gods

The twenty sacred hymns to the gods further contribute to their characterizations as expressed in oral tradition and ritual practice. The “Song of Chicomecoatl” invokes her as Chicomollotzin, or “Seven Ears of Maize,” personifies her as “our mother,” and, by addressing her as “you who are the maize,” associates her with the maize plant. Even more, it exhorts her to “arise, wake up,” and “sprout up” on the earth,⁴⁰ identifying Chicomecoatl not only as a goddess of maize but as maize itself. The song is notable for its plaintive personal plea to her to awaken from her seasonal slumber and sprout anew, so as to prevent leaving her children on earth bereft.

Florentine Codex, Book 1, “The Gods”

The expansion of material on the gods in Book 1 of the Florentine Codex is immediately apparent by contrasting its thirty-five folios with the seven of paragraph 5A in the *Primeros memoriales*. This increase was no doubt based on the vast amount of material gathered in Tlatelolco during the second research round of the *Historia* project. Despite this expansion, only twenty-one deities and five *tepictoton* appear in Book 1, with a first section of five gods identified as “major” deities, a second section of seven “major” goddesses, a third section of nine additional “minor” gods, followed by the five *tepictoton*. The designations of “major”

and “minor” had not been previously used to categorize indigenous deities. This compares to the thirty-six deities and five *tepictoton* that appear in paragraph 5A of the *Primeros memoriales*. Even the titles of the corresponding sections reveal the Florentine’s expansion. “How Each of the Gods Was Arrayed” in the *Primeros memoriales* signals a narrow focus on the visual appearance of the deities, whereas “The Gods” of the Florentine Codex announces an open-ended consideration. These changes also highlight the Florentine’s shift in the relationship between image and text, as well as a greater Europeanization of the deity depictions, features that exemplify the later manuscript’s varying omissions, modifications, and innovations.

Florentine Codex, Book 1, Format 1: Chicomecoatl

The Florentine’s deities are further presented in two formats, each differing from the consistent columnar pairing of image and text in the *Primeros memoriales*. The first format divides the folio into quadrants enclosing large individual figures (fig. 5.4), with five *tepictoton* unevenly occupying the last three quadrants. Less indigenous in bodily and facial character, their more elongated proportions, active poses, and sure-footed stances contrast with the stocky, floating figures in the *Primeros memoriales* (fig. 5.5). Gender differences are also manifest in the attire, as males are garbed in abbreviated clothing so that their bodily contours are more evident, whereas females are conservatively dressed in a long skirt and loosely fitted native *huipil* (tunic) or *quechquemiltl* (triangular upper garment). The greater adherence to European anatomical conventions no doubt reflects the Florentine Codex artists’ greater exposure to imported European standards of representation available at the *colegio* and in the viceregal capital of Mexico City.

As noted earlier, no central Mexican pictorial source displays the gods as a coherent group, as they are displayed in format 1 (see fig. 5.4), which attempts to show an entire pantheon in a few sequential folios. Their large size and clearly delineated forms may indicate that they were designed to facilitate the rapid recognition of individual native gods to provide missionaries with a ready reference. Making the Florentine’s gods look more realistically human also relates to Sahagún’s refrain in the appendix of Book 1, where he repeatedly emphasizes that what native people believed to be gods were in fact only human beings.

Although Chicomecoatl’s image is stylistically different, it is iconographically similar to the *Primeros memo-*

FIGURE 5.4. The gods. Top right, Chicomecoatl. Florentine Codex, Bk. 1, fol. 10v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

riales goddess (see fig. 5.5), revealing here the Florentine Codex artists' dependence on the earlier manuscript, or a draft or copy of it, albeit with modifications. Nahuatl names of the gods appear in an alphabetic script above their heads, adding for some the names of related gods of antiquity. Chicomecoatl's gloss thus identifies her as a goddess of maize and equates her with the Roman goddess of grain, Ceres ("es otra diosa ceres"). The familiar names of ancient pagan gods might have been intended to make the character of the Mexican gods easier to grasp and remember. López Austin points out that in the Códices Matrienses (Madrid Codices) the names of the Roman gods were added in Sahagún's own hand.⁴¹ Doing so placed the Mexican gods in the category of an obsolete ancient pantheon that no longer had an active religious role or

cult after having been replaced by the Christian god, an erasure that the Spanish missionary fervently sought to duplicate. In a further departure, the grouped deity images are separated from their intended related texts. Lacking folio numbers for Book 1, they thus appear to be a later insertion, with a gloss below the deities' feet directing the reader to a preexisting text, further severing the close connection seen between image and text found in the *Primeros memoriales*.

In contrast to the earlier manuscript's strict line-by-line itemization of Chicomecoatl's array, the Florentine Codex provides a brief discursive description of her, beginning with her name and its meaning, then portraying her as the representative of maize and sustenance. It repeats the earlier manuscript's array of the goddess from top to

FIGURE 5.5. *Chicomecoatl compared.* Left, *Primeros memoriales*, fol. 262r. *Código Matritense del Palacio Real de Madrid*. © Patrimonio Nacional, España. Right, *Florentine Codex*, Bk. 1, fol. 10v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

bottom, from her ochre-red face painting and misnamed “headdress” to her shield with a sun design, though it fails to mention the proprietary maize cobs she holds aloft.⁴² Another short description in the Spanish text follows the Nahuatl text, identifying Chicomecoatl as the goddess of sustenance, food, or drink, but it lacks any mention of maize, misidentifies the maize cobs as a vase, and erroneously calls her the first to make bread or cooked foods.⁴³

Florentine Codex, Book 1, Format 2: Chicomecoatl

The second format used in Book 1 takes the form of seven added vignettes, a continuation of the novel narrative scenes introduced in the *veintena* rituals of the *Primeros memoriales*. These go beyond the bare description of the deities’ attributes and array and venture into ritual roles, a province that properly belongs to Book 2, “The Ceremonies.” The vignettes mainly refer to water deities, reflecting the importance of their cults in the island locations of Tlatelolco and Tenochtitlan–Mexico City.⁴⁴ The elders of these urban cities had no doubt witnessed ornately staged deity rituals in contrast to the simpler versions celebrated in the inland town of Tepepulco, north of the Basin of Mexico, a reminder that while general features of religion and ritual were widely observed, local considerations were also accommodated.

Chicomecoatl appears at the end of chapter 1 in a passage dedicated to the water goddess Chalchiuhtlicue (Jade

FIGURE 5.6. *The gods.* Left to right, Tzapotlantenan, Chalchiuhtlicue, and Chicomecoatl. *Florentine Codex*, Bk. 1, fol. 6v (detail). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Skirt), in yet another type of narrative scene that displays her in an unusual composite grouping of fertility deities (fig. 5.6). The two standing deities are based on those in the *Primeros memoriales*: at the far left, Tzapotlantenan, a female goddess whose name is connected to the medicinal uses of turpentine; in the center, Chalchiuhtlicue; and at the right, a striking image of Chicomecoatl, here displayed frontally like a statue and drawn in a different style. Aside from the red paper crown, the twin maize cobs, and the shield already noted as emblems, hers is a distinctively indigenous delineation not found in the *Primeros memoriales*. She appears in a stately seated position wearing a red *quechquemilt* atop a red skirt with a diamond decoration related to rattlesnake markings. Most surprising are the seven live serpents spread out beneath her that, along with the skirt markings, visualize her name, Seven Serpent. These details ally her to earth fertility deities who also display symbolic serpentine features and were greatly honored in the Basin of Mexico.⁴⁵

Both the additional Spanish and Nahuatl chapter titles and the texts of Book 1 focus on the water goddess

Chalchiuhtlicue, with Chicomecoatl and Huixtocihuatl only briefly mentioned at the end of the text, when the three are jointly cited for their beneficence to humankind. These long texts report that on Chalchiuhtlicue's feast day the other deities honored were "the image of the maize," that is, Chicomecoatl, and the goddess of salt, Huixtocihuatl,⁴⁶ who is, however, replaced by Tzapotlantenan in the vignette.

Florentine Codex, Book 2, "The Ceremonies"

Ritual matters occupy most of chapter 1 in the *Primeros memoriales*, and Book 2 similarly constitutes one of the longest books of the Florentine Codex. In the earlier manuscript various aspects of Nahua ritual were deconstructed into fourteen paragraphs. The Florentine Codex ceremonies, however, emerge as a complex synthetic project that integrates separate aspects of the *Primeros memoriales* rituals and adds an extraordinary amount of material. As the prologues reveal, what preceded the final Florentine Codex was written, revised, copied, abandoned, again pursued, and again copied, resulting in the discarded folios of the interim Códices Matritenses and sundry other related writings known to have been produced and subsequently lost.

The abundance of information about the Florentine's *veintenas* was due to various reasons. Those who answered Sahagún's questions about native religion certainly faced a challenge in attempting to explain to an outsider the complexities of a religious tradition whose myriad rituals had suffused their entire lives. Another reason is that each *veintena* occupied twenty days, nearly an entire year to complete an extremely complex ceremonial cycle. Commandeering not only the stunning architectural setting and expansive spaces of the Templo Mayor in Tenochtitlan, the ceremonies involved the entire community and included an array of activities, such as processions, offerings of various kinds, dances, songs, fasting, and feasting, as well as numerous items and materials, fauna and flora, and often culminated in sanguinary ritual sacrifices. Some activities extended into the surrounding city and beyond to distant lakes and mountains and other natural earthly features. The meticulous preparations mentioned for these events in Tepepulco are just a brief rendering of what these extravagant and laborious ceremonial productions must have demanded in the Aztec capital. In addition, other rituals, titled "movable feasts," were guided by the 260-day *tonalpohualli* rather than the 360-plus-5-day

year count, or *xiuhpohualli*, that determined the *veintena* cycle. Yet other ceremonies observed life's personal milestones, like birth, marriage, and death.

Florentine Codex, Book 2, Hueytozoztli and Chicomecoatl

Compositional disparities between the two manuscripts are apparent as well. While the *veintenas* of the *Primeros memoriales* present an equal number of images and related texts, those of the Florentine Codex are accompanied by forty-nine illustrations, which are inconsistently allotted to the deities. Only eleven *veintenas* include images, with the greatest number being twelve for the spectacular ceremony of Tlacaxipehualiztli (Flaying of Men) dedicated to the male fertility god Xipe Totec (Flayed Our Lord). Others receive fewer illustrations, or none at all. Thus, unlike paragraph 2A, Book 2 abandons an organizational consistency, a regular format, and a close correlation between image and text. As with the gods of Book 1, the later *veintena* scenes are more Europeanized in style, consisting of animated narratives filled with figures who sometimes interact with each other or the architectural or landscape backgrounds in a European rather than indigenous mode.

Chapter 23 of the Florentine offers a long and detailed version of the feast of Hueytozoztli (Great Vigil) that honored Chicomecoatl as well as Centeotl, the male maize god.⁴⁷ Two scenes show devotees honoring the goddess with maize and other food offerings (fig. 5.7). In the first (bottom left), standing males offer maize stalks at the temple of Chicomecoatl while seated females render maize cobs and bowls of atole, a maize gruel. They are portrayed at close range in the manuscript's more Europeanized figural style, though the devotees remain clothed in traditional garb. Their ample size gives them greater visual impact, facilitating an easy reading of the scene, a device also employed with the deity figures of Book 1.

An unusual second scene shows a large seated image of Chicomecoatl (bottom right), similar to that in figure 5.6. She appears on a larger scale than her smaller devotees, who deposit proportionally large baskets overflowing with food offerings at her feet. The painting emphasizes the appearance of the goddess, whether as a statue or an *ixiptla*, as does the detailed text of the ceremony: "They formed her image as a woman," she who was their sustenance and made all their food. The text goes on to enumerate the various colors and forms of maize, as well as those of beans, amaranth, and chia.⁴⁸ When it was her feast day they gave

Bottom left, *Florentine Codex*, Bk. 2, fol. 28r (detail); bottom right, *Florentine Codex*, Bk. 2, fol. 29v (detail). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

her human form, and her arms, legs, face, paper crown, embroidered shift and skirt, and shield were “anointed all in red . . . completely red,” and she carried a double maize ear in either hand.⁴⁹ The description expands on many of the features first mentioned in the *Primeros memoriales* and enhances the activities of the feast by consolidating the additional traits that appeared in separate paragraphs of the *Primeros memoriales*, where she was honored as “our sustenance,” “our flesh,” “our livelihood,” and “our strength.” It also includes new details about her cult, such as relating that the old men in charge of the *calpulli* (wards) sang and beheaded quail for her.⁵⁰ The shorter versions of Hueytozoztli in the Florentine Codex and the Spanish text also reprise the many activities typical of her feast, including the making of her image with *tzoalli*, a dough of maize and amaranth, in the patio of her temple, thus intensifying her identification with the maize plant itself.⁵¹ Despite the differing pictorial styles (see fig. 5.7), there is

a strong correspondence, textual if not visual, between the characterization of Hueytozoztli in the two manuscripts.

The extended textual treatments of Hueytozoztli in the Florentine Codex thus contrast with the abbreviated account in the *Primeros memoriales*, as befit the more expansive staging of the *veintenas* in Tenochtitlan. It introduces a four-day fast, then repeats episodes from the *Primeros memoriales*, with variations that highlight the more public roles of males, such as the setting up of sedge plants everywhere while at night women made atole. It amplifies the young men’s skirmishes with priests as they walk the roads to the fields to get stalks of green maize to carry to their homes to honor the maize gods. They also leave offerings at the temple of Chicomecoatl, where yet other skirmishes follow. Also repeated is the young men’s taunting of young girls who carry dried maize cobs to the temple, where they are made into “hearts,” that is, the hearts of the grain that became seeds to be planted the following year.

There is a marked difference between the simplicity of the events described in Tepepulco and the Florentine's increased activities, abundant food offerings, and strained social relations. The Tepepulco ceremony, where the community as a whole, and young women in particular, played a central role, contrasts with the aggressive young males who dominate the antagonistic activities described in the Florentine Codex. Class antagonisms are expressed in skirmishes between them and the priests, reflecting discord between the elite *calmecac* students and those of the commoners' *tepochcalli* (house of youth), as well as among themselves. Gender tension is also apparent in the banter exchanged between them and the young females. This competitive spirit might have stemmed from the crowded urban location and more militaristic ethos of Tenochtitlan, where the bold actions of warriors had been admired and rewarded.

Chicomcoatl also acquires more roles in the Florentine Codex. Beyond her major participation in Hueytozotli, she also appears in the *veintenas* of Tlaxochimaco (Bestowing of Flowers), dedicated to Huitzilopochtli; Ochpaniztli (Sweeping of Roads), which honored the earth fertility goddess Toci; and Atemoztli (Descent of Water), where the *tepicoton* were honored, one of which was made in the form of Chicomcoatl. Her repeated appearances in other *veintenas* thus considerably expanded at a time when Aztec hegemony and tribute requisitioned throughout Mesoamerica were also significantly escalating. It was also fueled by carrying out the ceremonies in the largest and most populated urban center of its time in pre-Hispanic Mesoamerica, with the ritual showcase of the Templo Mayor providing an unparalleled outdoor setting for numerous events. In short, the *veintena* ceremonies in the Aztec capital of Tenochtitlan were more elaborately staged than in the distant regional center of Tepepulco, as would be expected, and hence were more spectacularly presented in the Florentine's images.

In addition, most of the material for the Florentine Codex was amassed and recorded over a period of about twenty years, far beyond the two years when the *Primeros memoriales* data was gathered and finalized. This partially accounts for the tremendous increase of data from the 88 folios of the *Primeros memoriales* to the approximately 1,200 folios of the Florentine Codex. The vast accumulation of pictorial and textual material that had to be organized, as well as the increasing pressure to conclude the project, coincided with Sahagún's advanced years at a time

when opposition to his project had reached a peak and the epidemic of the late 1570s devastated Mexico and the *colegio*.⁵²

HOW DID TLATELOLCO AND TENOCHTITLAN-MEXICO CITY IMPACT THE MAKING OF THE FLORENTINE CODEX AND ITS IMAGES?

Having examined in the prologues Sahagún's plan for the *Historia* and his use (or not) of native pictorial sources, and having analyzed disparities between the deity depictions in the images and texts in the *Primeros memoriales* and the Florentine Codex, I now consider the question of how the metropolitan centers of Tlatelolco and Tenochtitlan-Mexico City further impacted the completion of the *Historia* project and its images. Why was such an extraordinary number of images painted for the manuscript? And which group of artists could have accomplished this titanic task without any mention of a plan for their inclusion?

Let us briefly turn back to the early postconquest period, when the gifted Franciscan lay brother Pedro de Gante arrived in Tenochtitlan-Mexico City in 1523 with two companions, and a few years later founded the Chapel of San José de los Naturales. Intended for the education and conversion of indigenous youths, it adjoined the then humble church and *convento* of San Francisco. The friar taught his students Christian doctrine as well as music and singing to better participate in the Christian liturgy. He not only explored new uses for native Mexican arts that allowed trained indigenous artists to pass on their expertise to subsequent generations but also introduced students to a wide spectrum of European art, crafts, and skills, in which they excelled.⁵³

The *colegio*, established about ten years later in Tlatelolco, represented a major step in further educating the sons of indigenous lords and leaders by giving them a humanistic Renaissance education.⁵⁴ Mendieta reports that the most able boys were selected to attend the *colegio*, and this group surely included Gante's students, who had already been exceptionally well educated and trained in the arts, both traditional and imported.⁵⁵ The ambitious academic program of the *colegio* was further enhanced by the establishment of a library that boasted numerous European volumes from which students could not only learn about their subjects but also see how books were constructed and embellished with frontispieces and Renaissance-style illus-

FIGURE 5.8. Tlatelolco, caja de agua, north wall. Bottom, fresco with water scenes; above, drawing of water scene detail. Photograph and drawing by Arqlo. Salvador Guilliem Arroyo, director of Proyecto Tlatelolco, 1987–2018, Instituto Nacional de Antropología e Historia. Reproduced with permission.

trations.⁵⁶ In addition, a printing house was established in Mexico City as early as 1539, making more books available as scholarly sources and pictorial models.

The educational pursuits of the *colegio* provided a lively intellectual and artistic environment, encouraging projects that made use of the knowledge and talents of those selected to attend. The number of students in residence, and possibly former students as well, were available to assist in creative enterprises, such as collaborating with Sahagún on the *Historia*, as well as the projects of other friars. Certainly, too, the number of artists available in the urban hub far surpassed those in other areas. Related to the *colegio*'s ambiance and accomplishments is the fact that manuscript scholars have attributed to Tlatelolco the Badianus, Tlatelolco, and Cozcatzin manuscripts, and the

Uppsala and Santa Cruz maps, an indication that experienced artists were available there. Indeed, no other location in New Spain has been credited with producing so many major manuscripts in different genres.⁵⁷ And, like the Florentine Codex, these projects bridged native and European epistemologies.

Additionally, excavations following the discovery in 2002 of a *caja de agua* (water tank) for the Tlatelolco *convento* have unearthed the remains of sixteenth-century polychrome water scenes painted on three of the four surrounding walls of the water box (fig. 5.8). The style of the frescoes has been compared to images painted in the Florentine Codex, further revealing that artists affiliated with the *colegio*, which adjoined the *convento*, were involved with other ambitious artistic projects.⁵⁸ Many years

FIGURE 5.9. Scriptorium of Tlatelolco imagined. From National Geographic 158, no. 6 (December 1980): 733. Felipe Dávalos/National Geographic Creative. Used with permission.

ago Donald Robertson called attention to the achievements of the scriptorium of Tlatelolco, and the Florentine Codex as an exemplar of what he labeled the School of Tlatelolco.⁵⁹ Connecting the activities of the *colegio* to pre-Hispanic antecedents, Miguel León-Portilla has further compared the scriptorium to a *tlahcuiloyan*, a place of writing and painting that had flourished before the conquest.⁶⁰

THE TLATELOLCO PAINTING WORKSHOP IMAGINED

Turning to the question of the copious images produced for the Florentine Codex and the artists who might have

made them, I propose that those artists trained in the arts in Tenochtitlan–Mexico City and Tlatelolco be credited with playing a critical role in the production of the Florentine’s voluminous illustrations. Looking back to the 1560s and 1570s, when he was unable to work on the *Historia* for a variety of reasons, including his advanced age and infirmities, Sahagún, ever resourceful, might have called upon his former students and collaborators, and others affiliated with the scriptorium, to carry on the work of producing the images of the Florentine Codex to complete the *Historia* project (fig. 5.9). Since Sahagún never mentions artists or images as being an integral part of the *Historia* project, possibly to forestall even further criticism of

it, the experienced artists of the Tlatelolco scriptorium, abetted by those from San José de los Naturales, who had worked under the guidance of Pedro de Gante until his death in 1572, might have taken the initiative to plan and produce the myriad paintings of the Florentine Codex. In some cases, they modified images based on those of the *Primeros memoriales*, created vignettes that combined ancient and European features, and devised others to match the existing texts. As has been shown, they even found ways to modify deity images to retain their necessary inclusion. Only with this concerted effort would the Florentine Codex, as we know it, have been completed in time for it to be personally carried by fray Rodrigo Sequera from Mexico to Spain in early 1580.⁶¹

Finally, why was the Florentine Codex illustrated with such an abundance of images? As the Tepepulco and Tlatelolco collaborators knew, and Sahagún himself realized, it was the way knowledge had been recorded, and it preserved Nahua culture in proprietary pictorial and linguistic (Nahuatl) modes of expression, thus perpetuating a besieged heritage. And since the intended three columns of text in the 1569 “clean copy” were in the end reduced to only two, and much of the planned Spanish translation of the Nahuatl texts was replaced by a shorter paraphrase, the images played a practical role in filling the leftover spaces of the manuscript.

Painted in a Mexico that was in the process of being reconfigured from afar as a New Spain, the bicultural illustrations of the Florentine Codex and its bilingual texts recall a preconquest past that was being reimagined in a rapidly evolving postconquest present. By bridging the two eras and bringing the ancient Nahua past into their own time and place, the anonymous Tlatelolco artists made the Florentine Codex their own.

NOTES

1. The title *Historia general* broadly characterizes the project as one treating the “things of New Spain.” On the various titles offered for the *Historia*, see Dibble 1982a, 15–16; Terraciano, introduction to this volume.

2. For a review of the origin and history of the *Historia* project, see Dibble 1982a, 9–23.

3. On Sahagún’s Spanish prologues, see Sahagún 1950–1982, introductory vol., 45–101.

4. Aztec, an anachronistic term, here refers to Nahua culture in the pre-Hispanic period.

5. Transferring the Spanish terms *dios* or *diosa*, as well as those from other languages, to native gods raises the question of the meaning of

the Nahuatl term *teotl*. See Bassett 2015; and Olivier, chapter 7 of this volume.

6. See also in this volume chapters 6 (Boone), 7 (Olivier), 9 (Bassett), and 10 (Magaloni Kerpel).

7. On distinctions between the contents of the *Primeros memoriales* and the Florentine Codex, see Nicholson 1973b, 207–218; 1997, 3–14.

8. English titles for the *Primeros memoriales* are from Sahagún 1997, and for the Florentine Codex, from Sahagún 1950–1982.

9. Olivier, chapter 7 of this volume.

10. Sahagún 1950–1982, introductory vol., prologue to Bk. 2, 53.

11. On Tepepulco as the first site of Sahagún’s *Historia* research, see Nicholson 1974, 145–154.

12. On the *colegio* of Tlatelolco and its collegians, curriculum, and accomplishments, see SilverMoon 2007.

13. Sahagún’s references to scribes in the prologues apply to those who wrote the alphabetic texts, which gives the term a European connotation, for although dealing with an indigenous culture, the *Historia* manuscripts are Europeanized documents in format, alphabetic texts, and many materials. The scribes and artists thus performed a function closer to that of European scribes and manuscript painters than the native *tlacuiloque* who painted native pictorial manuscripts. Producing the Florentine’s lengthy texts (approximately 1,200 folios, or 2,500 pages) would have required a dedicated team of scribes proficient in writing in Spanish and written Nahuatl.

14. On the artists of the *Historia*, see Quiñones Keber 1988a, 1988b; and Boone, chapter 6 of this volume. On the artists of the Florentine Codex, see Magaloni Kerpel 2014, 27–34; and Peterson 1988, 273–293. On the artists of the *Primeros memoriales*, see Baird 1993; and Quiñones Keber 1997.

15. The number of images varies, consisting of figures and multifigural scenes, as well as numerous decorative tailpiece designs that are not tallied in the total.

16. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 46, 51.

17. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 48. The first publication of the Spanish paraphrase of the Florentine Codex by López Austin and García Quintana appears in Sahagún 1989.

18. Dibble (1982a, 15) cites a letter published in Baudot.

19. Dibble 1982a, 19; based on a suggestion by García Icazbalceta.

20. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 48.

Fashioning Conceptual Categories in the Florentine Codex

Old-World and Indigenous Foundations for the Rulers and the Gods

ELIZABETH HILL BOONE

This chapter explores two aspects of Sahagún's ethnographic project: the old-world sources (many ancient) that helped him conceptualize the cultural categories that would guide his investigation, and the indigenous images that were the foundation for the data that brought life to his ethnography. To do this I put into dialogue Sahagún's and his assistants' treatment of the Aztec kings with their treatment of the Aztec gods. One can see that the Aztec kings easily migrated from their preconquest frame to the pages of the *Primeros memoriales* and then to the Florentine Codex, but the Aztec gods had to be constructed from an array of discursive practices, both European and indigenous.

It is clear that Sahagún and his indigenous colleagues from the Colegio de Santa Cruz were deeply influenced by the writings of the ancients—classical and medieval authors who likewise gathered and organized broad-ranging data on the spiritual and secular world.¹ These possible intellectual influences include Pliny the Elder's *Naturalis historia*, Isidore of Seville's *Etymologiae*, and the popular thirteenth-century encyclopedia *De proprietatibus rerum* by the Franciscan friar Bartholomeus Anglicus.² Donald Robertson proposed Anglicus as a model, as its organization proceeds, like the Florentine Codex, from the divine, to the heavens, to humankind, and finally to mundane earthly things.³

For more specific topics, Garibay has also proposed Theophrastus's study of moral characters for "The People" (Book 10), Flavius Josefus's history of the Jews for cus-

toms, and Pliny's natural history for Book 11.⁴ To this list can be added the newer studies of foreign peoples that began to be written in the thirteenth century and were published in the sixteenth. Ellen T. Baird has mentioned the thirteenth-century ethnographies of the Mongols by the Franciscans John de Plano Caprini and William Rubruck. I propose also that Sahagún was probably influenced by a broadly popular collection of customs, the *Omnium gentium mores, leges et ritus* of 1520, gathered and arranged by Johann Boemus, another Franciscan, whose own study was influenced by Caprini and Rubruck. Also relevant is Polydore Vergil's *De inventoribus rerum*, published in 1499, whose first book begins with the origin of the gods.⁵ European models that specifically describe foreign gods are considered in greater detail later in this chapter. Sahagún's encyclopedic project was an extraordinary undertaking, but it necessarily relied on the efforts of earlier compilers who helped to chart a path.

The indigenous image was the other dominating model. For some realms of knowledge, Sahagún and the grammarians, as well as other friar ethnographers, relied more closely on the indigenous tradition of pictorial expression and on indigenous literary genres than on European literary collections and encyclopedias. Such decisions were likely determined by which native genres the indigenous informants thought most appropriate. In particular, the native calendar, divination, and historical accounts as they appear in the early colonial cultural encyclopedias derive from indigenous prototypes; indeed, two of the most im-

portant preconquest literary genres were the books of fate based on the divinatory calendar and the annals histories of community kingdoms.

This differential reliance on native or European models is especially clear in a comparison of Sahagún's treatments of the Aztec kings and the Aztec gods. The descriptions of the kings in both the *Primeros memoriales* (1559–1561) and the Florentine Codex (1575–1577) follow no European model but instead track closely to preconquest precedents as these can be reconstructed from surviving annals histories. There being no indigenous model for a structured and focused description of multiple Aztec supernaturals, as appears in the *Primeros memoriales* and Book 1 of the Florentine Codex, Sahagún and the grammarians looked to classical, medieval, and early-modern encyclopedias that list and describe the gods of foreign religions, notably the pagan gods of antiquity. The painted figures that served to help distinguish these gods, however, were derived—much altered and repurposed—from the indigenous image.

LORDS

A very many paintings in the Florentine Codex are highly Europeanized, characterized by a three-dimensional pictorial illusionism that yields a window onto an observed subject. The images of the rulers stand out, however, for their orthodoxy in adhering to the canons of Mexican pictography.⁶ They are even more conservatively treated in the earlier *Primeros memoriales*, where the sequent rulers of Mexico-Tenochtitlan, Texcoco, and Huexotla are stacked top to bottom on the right side of the page (fig. 6.1).⁷

In the *Primeros memoriales* each image adheres stylistically to its preconquest source—for it is a pictogram: a symbolic statement rather than a likeness of the ruler. The figures are flat and ideoplastic, in being composed of forms that are canonically known rather than observed with the eye. They are simply constructed of a profile head, selective body parts (lower back, rump, toes, and lower feet), and signifying attributes: cloak, headdress, nose bar (or absence thereof), distinctive seat, and name sign. Within the royal line of Mexico-Tenochtitlan the pictographer distinguishes the first three Mexica rulers (Acamapichtli through Chimalpopoca) from the others by means of the circular fan device of yellow parrot feathers (*cozoyahualloli*) on their heads, the leather cloak, and the simple seat of

reeds (*tolicpalli*) that signal their preimperial, Chichimec-derived status. But beginning with Itzcoatl, the imperial rulers wear the pointed turquoise diadem (*xihuitzolli*), the turquoise nose bar, and the royal turquoise blue cape with star border, and they sit on the high-backed woven-reed throne (*tepotzoicpalli*).⁸ These *Primeros memoriales* images retain much of the flavor of preconquest originals.

Glosses just to the left of the images name each attribute in a monotonous litany of symbolic elements: name sign written in red, and in black from top to bottom, headdress, cape, and seat. Beginning with Itzcoatl the scribe also names the nose bar, the turquoise cape, and its star-eye border. The viewer senses the requirement that each attribute be labeled, as if each were also meant to be individually recognized and voiced. Before the conquest a viewer of such images would have automatically appreciated the signifying force of each element as an attribute of rule and could well have read these attributes aloud for his listeners, but the early colonial drive to translate native discourse into alphabetic script called for the addition of the individual glosses here, repetitive though they are.

These same attributes are listed for each ruler through Cuauhtemoc, but not thereafter. The subsequent, colonial governors of Mexico-Tenochtitlan lack the indigenous attributes of rule—the headdress, the nose bar, and the turquoise cloak—and although they sit on high-backed thrones, which had come to signify authority more broadly, they are identified by name only.⁹ The texts that run down the left side of each page are equally repetitive, naming the sequential rulers, the number of years they ruled, and sometimes one or two of their major conquests and the events that were especially noteworthy (such as the conquest of the Tepaneca and the famine of the year One Rabbit). It is clear that this section of the *Primeros memoriales*—in its union of ruler, reign length, and events—is derived from fairly standard preconquest annals histories.

Although annals histories have survived only in early colonial copies, many of the copies retain fundamental features of their prototypes. The Codex Mexicanus, for example, records the identity of the rulers and the memorable events of each reign—such as natural and climatic phenomena, conquests, and other events of general import to the polity (fig. 6.2).¹⁰ In this annals the sequent rulers are crowned, seated, enthroned, and named much as they are in the *Primeros memoriales*. A prototype for the ruler presentation in the *Primeros memoriales* might

FIGURE 6.1. The lords of Mexico-Tenochtitlan. Primeros memoriales, fols. 51r and 51v. Códice Matritense. © Real Academia de Historia, España.

also have been something like the ruler list in the first part of the Codex Mendoza, where history is segmented according to the rulers and their conquests: each ruler and his conquests are recorded together on a page (fig. 6.3). The Mendoza rulers canonically wear the *xihuitzollí* (diadem), have a speech scroll that signifies the title of *tlatoani* (speaker), are seated on a woven mat, and are glyphically named. In a column on the left side of the page are the sequent years of his reign, and the conquests are arranged in rows to the right. A related presentation of rulers, but without the conquests, is found in the back of the Codex Aubin, where, on each page, the ruler is identified—with name sign, crown, blue cloak, speech scroll, and high-backed throne; although it does not specify the individual years, it does give the quantities of years. Thus, from what

we know of preconquest pictorial annals, ruler images were part of a historical discourse that also included reign lengths, conquests, and other events. Thus, when the ruler images were extracted from the annals histories and transferred first to the *Primeros memoriales* and then via this or another draft to the Florentine Codex, they brought with them as attributes some of the events associated with the rulers in the original sources.

The rulers section in the *Primeros memoriales* distills the major features of these annals (see fig. 6.1). Like them, it emphasizes the unbroken sequence of rulership, a canonical presentation of the rulers' form and costume, and the length of their reigns. But because its subject is the rulers themselves and not Aztec history per se, only some of the historical material is retained, not to be pictured but to be included in the explanatory texts. The text accompanying the image of Moctezuma Ilhuicamina, for example, says: "And when Itzcoatzin died, Motechuzomatzin the elder, Ilhuicamina, was installed, and he ruled thirty-five years. In this time occurred what was called being one-rabbed

FIGURE 6.2. Annals history of the *Codex Mexicanus*, p. 71, showing events of the years Four Reed to Nine Reed, including at Seven Rabbit the accession of Ahuitzotl. Bibliothèque nationale de France, Paris.

[*necetochhuiloc*], that is, in this time there was a famine in the one year sign One Rabbit.”¹¹ This is just the kind of information included in the annals.

The Florentine Codex continues both the traditional form of representation and the historical content in the texts. Its texts are more detailed, they especially include more conquests, and they also correct mistakes in the *Primeros memoriales* (e.g., the reign length of Moctezuma Ilhuicamina). The Spanish version follows the Nahuatl closely. Thus, for Moctezuma, the Nahuatl text of the Florentine Codex says:

The fifth ruler of Tenochtitlan.

Moctezuma the Elder was fifth, and ruled Tenochtitlan thirty years. He conquered and made war on all the people of Chalco; and on Quauhnaahuac and on all who were subject to Quauhnaahuac; and on Maçauacan. And in his reign there came a great famine which spread over the land for four years. Hence it was said that all were affected by the year One Rabbit [*Necetochhuiloc*]. All the

people of Mexico, and the Tepaneca and those of Acolhuacan dispersed among other [people].¹²

In the same way, the painter of the rulers in the Florentine Codex followed the precedent set in the *Primeros memoriales* but adjusted it. He seated both the preconquest rulers and the colonial rulers on the high-backed throne, assigned them all turquoise diadems, and named them glyphically (fig. 6.4). He ignored the distinction in clothing that usually characterizes the first three, preimperial rulers and instead standardized all the preconquest kings with signifiers of imperial rule: the turquoise diadem, turquoise cloak, and high-backed throne. The painter marked even the postconquest rulers with the diadem and throne. His message is a simpler one than that in the *Primeros memoriales*: to wit, all the preconquest rulers were equal in their status, and the colonial ones continued in their tradition. His success in stressing continuity from the preconquest past into the colonial present reinforced the authority of contemporaneous indigenous elites, who often asserted claims to privileges based on their descent from royalty. It also satisfied a desideratum for indigenous polities seeking cabecera (chief town) status, which was an unbroken history of direct *tlatoani* rule.¹³ The Florentine Codex artist did, however, reserve the royal-blue cloak for

FIGURE 6.4. The lords of Mexico-Tenochtitlan. Florentine Codex, Bk. 8; fol. 1r presents the first four rulers, and fol. 4v presents the four rulers after the death of Cuauhtemoc. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

of the divine, as Bassett and Olivier explain.²² Images of the gods also appeared in divinatory manuals, where their role was adjectival: they served as patrons of the calendrical units (e.g., day signs and *trecenas*) or participated in actions that characterized the augural influences of units of time. Preconquest Aztec intellectuals seem not to have been interested in listing, naming, and describing the supernatural forces as an exercise in and of itself, so there was no indigenous template per se for such a study.

Neither were there acceptable European models for recording and explaining a host of supernaturals that Europeans recognized as devils; such a study would easily

and quickly have been condemned as heretical. The principal deity of Calicut in southern India, for example, was described and pictured in 1515 as a generic horned devil with hairy arms and avian feet in Ludovico Varthema's popular account of his travels to the east.²³ Acceptable models did exist, however, for considering the pagan gods of antiquity, and in the broad humanist climate of early-modern Europe, scholars and educated people were open to such. Since studies of pagan gods were fodder for humanist thought across Europe, they became the safest model for treating the Aztec gods, who then could be conceptualized along similar lines.

The *Primeros memoriales* and Florentine Codex differ in their approach to the gods. The *Primeros memoriales* presents only the gods' images—thirty-six in number plus five *tepicototón* (small effigies of mountain rain supernaturals) grouped on thirteen pages—and an itemization of their physical attributes (fig. 6.7); the title of this section

FIGURE 6.5. The accession of Tizoc following the death of Axayacatl. Diego Durán, *Historia de las Indias de Nueva España y islas de la tierra firme*, fol. 111r. Biblioteca Nacional de España, Madrid.

FIGURE 6.6. Doña Marina, Hernando Cortés, and Tlillancalqui, lord of Cuextlaxtlan, shortly after Cortés disembarked in Veracruz. Diego Durán, *Historia de las Indias de Nueva España y islas de la tierra firme*, fol. 202r. Biblioteca Nacional de España, Madrid.

specifies that it tells “how each of the gods was arrayed.”²⁴ The Florentine Codex is more holistic, for although it likewise details costume elements, it also describes the gods’ characteristics, realms, and feasts. Quñones Keber illustrates this well in her comparison of the presentations of Chicomecoatl.²⁵ Book 1 of the Florentine Codex opens with six pages that picture most of the same gods included in the *Primeros memoriales* but framed four to a page, ending also with *tepictoton*; glosses name them and sometimes link them to Roman counterparts (e.g., Huitzilopochtli as another Hercules, Tezcatlipoca as another Jupiter) (fig. 6.8).²⁶

The Nahuatl and Spanish texts that immediately follow these six pages of illustrations describe the gods’ attributes, noting the gods’ principal and variant names,

their relation (if any) to other deities, their realms and influences, the rituals for them, and their physical attributes, clothing, and accoutrements. The Nahuatl texts, closer to the texts in the *Primeros memoriales*, focus more on the deities’ costume elements, itemizing them in detail. The Spanish texts are slightly longer; they cover the gods’ association, realms, and ceremonies more fully but ignore the costume elements and accoutrements for several of the gods, including Huitzilopochtli, Tezcatlipoca, and Tlaloc.²⁷ Within these texts, seven paintings illustrate offerings and ceremonies.

The Florentine Codex divides the deities into major gods, major goddesses, and lesser gods, which Guilhem Olivier and Andrew Laird note follows the taxonomy used by Saint Augustine and derived ultimately from Roman authors.²⁸ I propose also that for Sahagún’s overall presentation of the gods—and for the idea of a descriptive genre that treated the gods—he and the grammarians looked beyond the encyclopedias of Pliny, Isidore, and Bartholomeus Anglicus to the descriptive collections of pagan gods that appeared in Europe in the thirteenth through fifteenth centuries and flourished especially in the mid-sixteenth century.²⁹

European studies of pagan gods can be traced back to the early thirteenth-century treatise *Liber ymaginum deorum*, by an author known simply as “Albricus philosopher.”³⁰ Albricus gathered information from a variety of earlier authors, but his contribution was to organize it as an encyclopedia. He devoted a chapter to each of almost twenty gods, describing for each the god’s appearance and physical attributes, realms of influence, associated meanings, and relation to other gods, just the kind of information that Sahagún and the grammarians would eventually include in the Florentine Codex. For example, Albricus’s first chapter on Saturn begins thusly:

Saturn.

1. The first god was Saturn: they say that he was old, sad, white haired, his head covered in a blue grey cloak, that he devoured his own sons, carrying a sickle, and in his right hand a fire-vomiting snake that devours its own tail.
2. History maintains that Saturn’s father and Jove, his son, had obtained a kingdom in Crete.

Albricus then continues in this vein with details about Saturn’s offspring, actions, and astronomical associations.³¹

FIGURE 6.7. The first six Aztec gods. Primeros memoriales, fols. 261r and 261v. Códice Matritense del Palacio Real de Madrid. © Patrimonio Nacional, España.

Albricus's treatise, with its emphasis on visual appearance, would exert "a profound and lasting influence on the iconography of the gods."³² It affected Petrarch's commentary on the Olympian gods, which likewise described their poses, costuming, and attributes.³³ It also influenced Giovanni Boccaccio's *Genealogia deorum gentium* (1360), the best known and most authoritative of the fourteenth-century encyclopedias of ancient gods.³⁴ Boccaccio sought to regularize the intricate genealogies of the classical gods, and although he focused on the gods' genealogical ties, he also interpreted their material attributes. For Minerva, for example, he explained that her elaborately embroidered floral peplum was intended as a directive that wise speeches should be ornate, florid, and witty.³⁵

Boccaccio's *Genealogia* remained the principal source

for the imagery and mythology of the classical gods until the mid-sixteenth century, when it was replaced by a cluster of new manuals published between 1532 and 1556. These include Georg Pictor's *Theologia mythologica* of 1532, which, in the tradition of Albricus and Boccaccio, focused on the names, appearance, and allegory of over twenty gods, including mention of those of Egypt and Assyria.³⁶ There followed Lilio Gregorio Giraldi's *De deis gentium* of 1548, Natale Conti's *Mythologiae* of 1551, and, the best known, Vincenzo Cartari's *Le imagini con la spositione de i dei de gliantichi* of 1556.³⁷ Cartari emphasized the iconography of the gods' statues and representations with a view to providing pictorial subjects for painters and sculptors, and the third edition (1571) of his manual was illustrated with vivid woodcuts that led to its outstanding popularity.³⁸ Such studies, or the idea of such studies, probably helped Sahagún frame what questions he would ask of his informants, what information the team would ultimately include, and how it would be organized. The Franciscan and his team might also have had in mind that

FIGURE 6.8. The first four Aztec gods. Florentine Codex, Bk. 1, fol. 10r (pagination in lower right). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Christian saints were visually recognized by their attire and symbols, as Quiñones Keber points out in chapter 5 of this volume.

The Mexicans' decision to illustrate each god separately also had precedents in Europe, for by the sixteenth century a few of the printed editions of the studies of pagan gods were being illustrated with woodcuts of each god. The European illustrations differ from the Mexican ones, however, because they typically locate the gods in scenic space, engaging in activities specific to them and surrounded with images of their attributes that are described in the texts they accompany. Examples are two French editions

of Boccaccio's *Genealogia* (1498–1499, 1531) illustrated with woodcuts, including, for example, a large scene of Saturn eating his son, holding a sickle and the snake that devours its own tail, and surrounded by figures that signify other of his aspects, including the birth of his daughter Venus from sea-foam.³⁹ Simpler woodcuts in two midcentury German studies—Johannes Herold's 1554 *Heydenweldt und ihrer Götter* and Pictor's 1558 *Apotheseos tam exterarvm gentivm quam Romanorvm deorvm libri tres* (a republication of his *Theologia mythologica*), which repurposed Herold's illustrations—also embed the gods in scenic space and show them holding or surrounded by an

FIGURE 6.9. Apollo. Georg Pictor, *Apotheseos tam exterarvm gentivm qvam Romanorvm deorvm libri tres* (Basel: Nikolas Brylinger, 1558), fol. 24. Bayerische StaatsBibliothek, Munich, Exeg. 475#Beibd.3, urn:nbn:de:bvb:12-bsb00029735-1.

array of attributes (fig. 6.9).⁴⁰ The engravings in the 1571 edition of Cartari, which isolated the gods more fully and greatly influenced later print cycles, came too late to be a model for Sahagún's overall project.

One exception to this layering of attributes is the pair of woodcuts of the major and minor gods of the Goths in Olaus Magnus's 1555 *Historia de gentibus septentrionalibus*, a copy of which was held in the Colegio de Santa Cruz library.⁴¹ Escalante Gonzalbo proposes that Magnus's publication might have served as a model for several descriptions and images in the Florentine.⁴² It might have influenced the presentation of the gods as well. Magnus's illustrator united the three major gods—a seated Thor flanked by Frigg and Odin—in a single woodcut but kept

FIGURE 6.10. Major gods of the Goths: Frigg, Thor, and Odin. Olaus Magnus, *Historia de gentibus septentrionalibus* (Rome: De Viottis, 1555), 100. Bayerische StaatsBibliothek, Munich, 2 Gs 533, urn:nbn:de:bvb:12-bsb11197030-2.

them conceptually isolated (fig. 6.10). He gave them all a decidedly classical pagan look to reflect Magnus's text, which identified the female Frigg as another Venus and the warrior Odin as Mars.

It is hard to say how much, if at all, these European deity images might have influenced the visual form and presentational style of the Aztec gods in Sahagún's project and the other Mexican encyclopedias. The prints in Magnus's *Historia* are closer to the Aztec paintings in the Florentine Codex, because they situate the gods in undefined space and focus only on their dress, here Romanized to fit the classical analogy Magnus proposed. But the Mexican paintings stand out because they or their antecedents are foundational to the descriptive texts, which derive partially from them, rather than being descriptively illustrative of the texts. They also innovate in focusing on the gods' indigenous costume elements rather than simply dressing the gods in classical, medieval, or early-modern fashion. This focus on specific elements of costume, especially in the *Primeros memoriales*, which labels them all, and in the Nahuatl text of the Florentine Codex, which itemizes them, reflects the indigenous understanding that the *teotl* (sacrality) of the gods was manifest in the items that came together to form their *teixiptla* (localized embodiment): for example, the capes, headdresses, back panels, pectorals, and other ornaments that are glossed in the *Primeros memoriales*.⁴³

The visual sources for the gods' insignia in Sahagún's actual images are found within indigenous pictography.

FIGURE 6.11. Tlaloc as patron of the seventh trecena (beginning with One Rain). Codex Borbonicus, 5. Bibliothèque de l'Assemblée nationale Française, Y.120.

Alfredo López Austin suggested they came from original paintings the elders copied or drew from memory, and H. B. Nicholson suggested that these memories were of deity impersonators, such as those depicted in the second (*veintena*) section of the Codex Borbonicus.⁴⁴ It is also probable that images were pulled from surviving preconquest divinatory codices.⁴⁵ When the Tepepulco elders were called upon to produce the images of their former gods in the 1550s, they might well have turned to the divinatory codices—ones similar to the *tonalamatl* (book of days) in the Aztec Codex Borbonicus and the manuscripts of the Borgia Group—which contained images of the gods in abundance. The elders might have brought the books themselves, which many of them might have owned, or intermediary paintings representing the individual supernaturals.

In the *Primeros memoriales* the Aztec gods are presented, much like the Aztec lords, as ideoplastic, two-dimensional entities in the preconquest tradition. In a similar way, glosses name both the gods and the items of

their attire but do not otherwise describe them. Beyond this, the commonalities the gods share with the rulers end. Almost all the *Primeros memoriales* gods are upright, with their legs positioned one in front of the other, knees somewhat bent, and feet seeming to dangle.⁴⁶ It is not quite a standing pose, but close to it.

One finds distant models for these figures in the Aztec and Borgia Group divinatory manuscripts, where the gods appear as patrons of the day signs, the *trecenas*, and other units of time. The Codex Borbonicus and Tonalamatl Aubin invariably pose these supernaturals with arms outstretched in front, at an angle, and their legs positioned in a pinwheel, one leg up and one leg back (fig. 6.11).⁴⁷ This is the standard pose (with a few exceptions) of the male *trecena* patrons and the male lords of the night in Aztec *tonalamatl*; the females have their knees together beneath their skirts. Both have their arms outstretched, in a distinctive pose that may signify their control over the temporal units.

When the friars asked for images of the gods, the in-

indigenous collaborators might well have turned to *tonalamatl* as the only relevant graphic sources at hand. In extracting the images and repurposing them for the cultural encyclopedias, they enacted two fundamental changes. First, they reconceptualized the images ontologically, and then they transformed them visually. By reproducing them individually, the indigenous painters tore them from their divinatory and sacred contexts and discarded all their meaningful associations and roles there. Unlike the ruler images, which transferred to the *Primeros memoriales* and the Florentine Codex with their associated historical data, the divinatory association of the deities was suppressed. The transfer also reduced what had formerly been signifying signs, to yield images that were simple visual representations of anthropomorphic beings. What had been a complex visual statement within a rich network of meaning became an illustration of the figure and costume of deities for a postconquest viewership.

Colonial ethnographies from the mid-sixteenth century, such as the *Codices Magliabechiano*, *Tudela*, and *Telleriano-Remensis*, consistently employ images of individual supernaturals to signify the *veintena* celebrations (fig. 6.12);⁴⁸ Nicholson has called them *veintena* “logos.”⁴⁹ These figural renderings were isolated on the page of European paper, framed by pristine space that invited inspection and the addition of textual exegesis. Descriptive annotations were then written opposite or below. As the first mark put on each page, the deity figure commanded an extravagant amount of paper, where it waited for discussions and words to complete it and articulate its meaning. The image remained the foundation for the unit of information and the source from which the discursive text sprang, but neither the text nor the image could adequately inform without the other.

This process of reconceptualizing the deity images also transformed their formal properties. In the *Codex Magliabechiano* especially, the painter made the figures full and fleshy, with curved lines to suggest a new three-dimensionality and a more organically coherent human form (fig. 6.13). Since the distinct pose of the augural patron no longer carried its preconquest divinatory meaning, the artists allowed the pose to degenerate. Arms are still usually outstretched and holding attributes, but often one arm was simply omitted. The leg position, while retaining the basic pinwheel, has become less distinct, so the figures appear in awkward half-seated, half-standing, or crouching poses. The Magliabechiano painter, recognizing

FIGURE 6.12. Mixcoatl as the deity celebrated on the *veintena* feast of Quecholli. Codex Telleriano-Remensis, fol. 4v. Manuscript Mexican 385. Bibliothèque nationale de France, Paris.

FIGURE 6.13. Tlaloc as the deity celebrated on the *veintena* feast of Atemoztli. Codex Magliabechiano, fols. 43v–44r. Biblioteca Nazionale Centrale, Florence, CL. XIII. 3 (B. R. 232).

this awkwardness, even added a low stool to give his posed deity something to sit on. The image has changed conceptually from an element in pictography to a mimetic replication of a deity’s anthropomorphized figure, a *teixiptla*.

The painters of the *Primeros memoriales* (see fig. 6.7) kept the indigenous ideoplastic form, but, like the Ma-

gliabechiano and Telleriano-Remensis painters, they discarded the original context in order to create visual representations that are intended to educate a new audience, one that expected a pictorial likeness. The old pinwheel pose, having lost its meaning, was further reduced to two bent legs, one in front of the other, with dangling feet. Only some costume elements were retained and became the basis for the alphabetic annotations.

The transformation of the Aztec pictographic image into a European mimetic one is carried further in the Florentine Codex, where the figures are even more corporeal than those in the Magliabechiano. Their proportions more closely approximate those of the human body, most are rendered with their upper torsos turned to a three-quarter view, and many stand firmly on an implied ground. As Quiñones Keber points out in this volume, this visual humanization parallels Sahagún's statements in the appendix to Book 1 that these figures are not actually gods but only humans.⁵⁰ Olivier also explores Sahagún's efforts to render the Aztec supernaturals as ordinary people.⁵¹

Conceptually, also, the images have been gathered into a set, and sets, by nature, establish parity between members of the assemblage and relate them to each other as entities that belong to the same class of thing. Sahagún's team provided what they considered a canonical set of the Aztec pantheon. And this idea of gathering together all the gods in a set probably came from the model of European collections of pagan gods: Albricus and those that followed. The texts in the Florentine Codex are telling, for, like the godly descriptions in Albricus, they present the gods' names and titles, their powers, their ceremonies, and their attire. The Nahuatl and Spanish texts overlap in this respect, but the Spanish texts cover the ideological aspects more thoroughly, while the Nahuatl texts focus more on the attire. Ultimately, only the attire derives from the ancient indigenous image, and then much reduced iconographically and transformed pictorially.

Sahagún's treatments of the Aztec kings and the Aztec gods differ largely because they differentially relied on indigenous and European models. For the rulers, there were precedents in the preexisting annals histories, and perhaps even in special-purpose ones somewhat like that in the Codex Mendoza, which concentrates on the sequence of rulers, the reign lengths, and the conquests. Data from the annals easily made the transfer into the European con-

ceptual category of "rulers," such that the figures themselves retained their pictographic character, and historical events from the annals provided substance for the texts in both the *Primeros memoriales* and the Florentine Codex. Sahagún's pictorial and textual descriptions of the Aztec kings, then, remain fairly local.

The structured presentation of the gods, however, was more of a challenge, for there was no preconquest antecedent. Moreover, as Olivier explains in the following chapter in this volume, the indigenous supernatural was a contentious concept that was at the heart of the mendicant efforts to extirpate idolatry. The Aztec gods—whether considered *teotl*, *diablome*, or manifest as *teixiptla*—comprised a contested and potentially dangerous realm that called for careful handling, in a way the rulers did not. The gods are omnipresent in the first three books of the Florentine Codex, and Book 1 focuses squarely on them as a set.

Sahagún and his colleagues found a satisfactory conceptual model for this set in the descriptive collections of the pagan gods of antiquity, which had become so popular among European humanists in the sixteenth century. Such collections were ideal templates for presenting foreign gods from a neutral, impartial position. Thus, although the appendix to Sahagún's book of the gods decried the ancient supernaturals as devils and refuted "the idolatry described above,"⁵² the descriptive texts that preceded this appendix and that actually explain the gods' realms, attributes, and features were more objective and aligned several with the gods of Roman antiquity.

Sahagún's artists, for their part, might have found models for separating and distinguishing individual gods by noticing this system in woodcuts that illustrated some studies of pagan gods, but their own efforts otherwise stayed closer to indigenous sensitivities. They rendered the gods' distinctive costume elements rather than their realms and mythological aspects and set the figures in undefined, flat space, according to the tradition of indigenous pictography. As Magaloni Kerpel points out, they also organized the figures in rectangular cells that fully fill the page, as in preconquest divinatory almanacs.⁵³ It was likely from these books of fate that the iconography originally came.

The painted images of the gods in the *Primeros memoriales* and the Florentine Codex clearly look back to preconquest paintings and practice, but they had been changed in their pictorial essence. The conceptual divide between pictographs of supernatural patrons in the con-

text of a preconquest almanac and the pictorial and descriptive listing of Aztec gods that Sahagún ultimately desired meant that the original preconquest images had to be fundamentally transformed: they had to be stripped of their prognosticatory associations, reconceptualized as painted replicas of three-dimensional physical entities, and subsumed within an encyclopedic effort modeled after European goals.

European encyclopedic models helped Sahagún and his indigenous collaborators construct, or reconstruct, what we would now call ethnographic knowledge about native peoples. The raw data of this knowledge, however, remained grounded in indigenous practice and in the figures and paintings of Mexican pictography. In Mexico, the European model joined the native image to create cultural encyclopedias that are uniquely pictorial. No other culture colonized by Europeans in the early modern period was documented in paintings to the extent that the Aztecs of Mexico were. The prominence of the paintings in these cultural encyclopedias remains a legacy of the indigenous tradition of Mexican pictography.

Teotl and Diablo

Indigenous and Christian Conceptions of Gods and Devils in the Florentine Codex

GUILHEM OLIVIER

We cannot deny that in some basic elements there is often a surprising uniformity between Old World and New World art. I recall the step meanders and the running dog who play no less significant a role in ancient Peruvian and ancient Mexican decoration than in the ancient Grecian. Likewise, we acknowledge that single words in Indian languages often bear a remarkable resemblance in sound to those of the languages with which we are familiar, for instance teotl, the Mexican word for “god.”

EDUARD SELER, “ON THE ORIGIN OF CENTRAL AMERICAN CIVILIZATIONS”

Without a doubt, among the many subjects addressed by Sahagún and his Nahua collaborators in his sweeping and encyclopedic work, the gods stirred the friar’s greatest interest and were the topic to which he devoted the most space.¹ This chapter analyzes how the deities were named and represented in Sahagún’s work, taking into account the context in which they appear and the views that are expressed about them, both by the Franciscan and by his Nahua team of scribes and artists. The use of the term “devil,” even in the Nahuatl text, along with depictions of diabolic figures in vignettes of the Florentine Codex, reveal some of the ways that Sahagún and his collaborators understood Nahua religion. In particular, by examining how the Franciscan debated the meaning of *teotl*—a Nahuatl term commonly translated as “god”—it may be possible to uncover the diverse and even contradictory strategies that he adopted to combat indigenous beliefs. Despite the “filters” that determined Sahagún’s outlook and the fact that his collaborators were professed Christians, it is possible to gain a deeper understanding of the Nahua concept of *teotl*. Above all, I evaluate Sahagún’s deployment of *teotl* in a broader semantic field based on a critical and contextual study of the Nahuatl and Spanish texts in his work. In doing so, I introduce new arguments concerning the discussion of the “divinization” of the Spaniards, who were referred to as *teteo* (plural of *teotl*) in Nahua sources.

Let us begin with the place assigned to the gods in Sahagún’s work. Although specific books in the Floren-

tine Codex are devoted to them, pre-Hispanic deities are omnipresent in both the Spanish and Nahuatl columns of text, as well as in the illustrations. In fact, the first three books of the Florentine Codex are dedicated to the description of the gods and their insignia, the feast days when they were venerated, and the origin of the gods, which we might call their myths. The next two books deal with the divinatory calendar and the divine influences that make themselves manifest on specific day signs of the 260-day *tonalpohualli* and the “omens and evils” that characterize the intervention of the gods under special circumstances. Moreover, Book 6, on rhetoric and moral philosophy, begins with prayers addressed to Tezcatlipoca and Tlaloc,² and the seventh contains the renowned myth of the origin of the sun and the moon. Whereas the eighth, ninth, and tenth books address more mundane matters related to Nahua society, they nevertheless include important data on the gods of the *pochteca*, or merchants, as well as on the deities venerated by various ethnic groups. Even Book 11, “Earthly Things,” contains a number of allusions to the native gods in addition to images of supernatural beings, such as a peculiar representation of Huitzilopochtli (fig. 7.1).³ Finally, the indigenous version of the conquest in the celebrated twelfth book contains valuable accounts of rituals, such as those carried out during the twenty-day *veintena* of Toxcatl, and a remarkable description of the appearance of Tezcatlipoca, “Lord of the Smoking Mirror,” revealing to Motecuhzoma’s terrified envoys the apocalyptic vision of their capital city of Tenochtitlan in flames.⁴

The omnipresence of gods in Sahagún’s oeuvre repre-

sents two complementary realities: on the one hand, the Franciscan's supreme interest in extirpating native idolatry, and on the other, an interest in identifying the role played by gods in the indigenous world, gods that permeated all aspects of life.⁵ As is widely known, the purpose of Sahagún's work was to make known to "preachers and confessors, physicians of the souls . . . the spiritual ailments . . . [such as] the sins of idolatry, idolatrous rituals, idolatrous superstitions, auguries, abuses, and idolatrous ceremonies [that] are not yet completely lost."⁶ To carry out this purpose it was necessary to have a command of the Nahuatl language, as fray Bernardino points out in the prologue to the *Historia general*: "This work is like a dragnet to bring to light all the words of this language with their exact and metaphorical meanings, and all the ways of speaking, and most of their ancient practices, the good and evil."⁷

Sahagún's mission to exhaustively record the Nahuatl language naturally extended to the numerous members of the Nahua pantheon. Although certain gods—such as Huitzilopochtli, Tlaloc, Quetzalcoatl, Tezcatlipoca, and so forth—were well known through other textual sources, other deities would have remained completely unknown were it not for the Franciscan's work. For example, it would appear that the only extant reference to Xiuhtlati and Xilo, the goddesses of feather artisans (or *amanteca*), comes from the Florentine Codex.⁸ Similarly, Sahagún's collaborators—some of whom were most likely linked to

the merchant guild—provide a long list of the numina that they venerated.⁹ Furthermore, Nahuatl texts—prayers, for example—present the rich divine nomenclature associated with one deity or another. Tezcatlipoca is presented under the names of Titlacahuan, Yaotl, Necoc Yaotl, Tepochtli, Yohualli Ehecatl, Ce Miquiztli, and Ome Acatl, as well as his names linked to the supreme deity, Mone-nequi, Moyocoyani, Tloque Nahuaque, Ipalnemoani, and others.¹⁰

In addition to discovering the countless visages concealing the devil, Sahagún attempted to prevent indigenous people from adopting these pagan names. Indeed, by speaking of four aspects of the goddess Tlazolteotl, Sahagún explains: "Of these four goddesses they took and still take their names for Mexican women, which are Tiacapan, Teicu, Tlacu, Xuco. It is better to remove them."¹¹ At the same time, after listing the twelve pulque gods, the friar states, "Until today these diabolical names endured among the noble men."¹²

Yet names, as well as divine representations and their associated rituals, were captured in Sahagún's work; lists of attire recorded in Nahuatl and in a rich iconography have been the subject of considerable study. Even though they were influenced by a Western anthropomorphic tradition, the representations of the gods in the *Primeros memoriales* and the Florentine Codex adhere to the ancient pictographic tradition through their identifying insignia.¹³ Other images illustrate the appearance of deities, at times under the guise of their animal doubles, and their performances during myths, such as the birth of Huitzilopochtli or Quetzalcoatl's heroic deeds in Tollan. The *tlacuiloque* (scribes/artists, plural of *tlacuilo*) painted acts of devotion and offerings, as well as the unfolding of feast days that featured the participation of the *ixiptla* (impersonator or image), a slave or war captive who personified the gods.

Noteworthy is the fact that even when showing the production of statues or the veneration to which they were dedicated, the divine representations are always depicted as living persons.¹⁴ Although some of the painted figures are *ixiptlahuan*, or god surrogates, in other cases this systematic anthropomorphism seems to respond to a strategy that consisted of stripping divinity from the pre-Hispanic gods, in other words, in presenting them as ordinary men.¹⁵ I will show that this iconographic strategy also has its parallels in the text with Sahagún's usage of the theory of the Greek Euhemerus.¹⁶

The diabolical figures that Sahagún's collaborators called *diablome* and even *diablosme*, using the Spanish term with a Nahuatl plural, should be added to this corpus of "divine" representations. Ever pessimistic and always suspicious, the Franciscan warned readers, "I know of a certainty that neither does the devil sleep nor is the reverence these natives render him forgotten; and that he is awaiting an opportunity, that he may return to the dominion he has held. And it will then be an easy matter for him to awaken all things pertaining to idolatry that are said to be forgotten. And for that time it is good that we have weapons on hand to meet with him."¹⁷ Despite this warning, it is significant that there are relatively few images of devil-like creatures in the Florentine Codex. Furthermore, and somewhat paradoxically, although Sahagún's Nahua collaborators used the terms *diablome* or *diablosme* to describe the native gods in the first books of the Florentine Codex, it is not until Book 6 that we find the presence of a European devil in the illustrated vignettes. In this case, we see a devil with horns taking the place of Tlaloc to receive offerings in times of drought (fig. 7.2).¹⁸ In Book 7, to illustrate the ritual of the end of the fifty-two-year century, which consisted of renewing domestic utensils, a vignette shows an angry man tossing out pieces of ceramics and stone, as well as a smiling European devil.¹⁹ A similar devil appears as a statue or a sacred bundle borne by a priest.²⁰ A devil with a serpent tail witnesses a human sacrifice, while another appears behind the procuress who tries to tempt a woman to become a prostitute (fig. 7.3).²¹ And

in Book 11, a devil with a bird's head and clawed hands and feet perches atop a hallucinogenic mushroom, while an analogous figure, with a bird head and talons but with a human body and loincloth, stands before a large stone that is a type of jet (fig. 7.4).²²

The Nahuatl names for both this mushroom (*teonanacatl*, or divine mushroom) and the jet stone (*teotetl*, or divine stone)—names that included the prefix *teo-* from *teotl*—might explain the presence of the devils in these vignettes; that is, the image of the devil served to express the word *teotl*. However, another interpretation is possible of the "devil" figure as Huitzilopochtli,²³ who is similarly represented on folio 47v of the same Book 11 (see fig. 7.1). Therefore, in both the name of the stone, *teotetl*,²⁴ and that of *teonanacatl*, Huitzilopochtli might represent the word *teotl*, perhaps given his identification with the sun. On the one hand, the solar identification of Huitzilopochtli is explicitly expressed in the text accompanying his depiction on folio 47v;²⁵ on the other hand, Sahagún states, "they called the sun *teotl* because of its beauty," which is confirmed by his Nahua collaborators when they describe the celestial orb: "The sun: the soaring eagle, the turquoise prince, the god" (Tonatiuh, quauhtlecanitl, xipilli, teutl).²⁶ Moreover, the solar disk expresses the word *teotl* in Nahua pictographs.²⁷ Even if Huitzilopochtli as the sun served as the referent for the word *teotl* in these glyphic compounds, his representation in these cases remains an image that could be called "diabolical," quite unlike its pre-Hispanic and early colonial antecedents.²⁸

One final image of devils in the Florentine Codex includes two creatures, one with unruly hair and one a goat, both diabolical animals inside twin temples (fig. 7.5).²⁹ The pyramid is probably a representation of the Templo Mayor (Great Temple) of Tenochtitlan, with the devils—described by Sahagún's Nahua collaborators as "in tzitzimil, in coleletli, Diablo"³⁰—replacing the images of Huitzilopochtli and Tlaloc in their respective temples.³¹

More needs to be done to identify the European sources used by the Florentine Codex *tlacuiloque* to render these devils, as well as comparisons with devil iconography in the visual culture of New Spain. As a preliminary observation, the devils in the Florentine Codex lack the accoutrements characteristic of pre-Hispanic deities, unlike the diabolical figures in the Atlas de Durán or in the illustrations accompanying the *Descripción de la ciudad y provincia de Tlaxcala*.³² In fact, in these works we find European

FIGURE 7.3. A devil behind a procuress. Florentine Codex, Bk. 10, fol. 41r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

devils with headdresses, nose plugs, or masks and serpentine staffs that identify them with specific pre-Hispanic deities. None of this can be found in the Florentine Codex, except perhaps in the case of the hummingbird-headed Huitzilopochtli mentioned earlier.³³ I would like to highlight the scene in the Florentine Codex of the devil that appears behind the procuress, which resembles two sixteenth-century wall paintings in the *visita* chapel of Santa María Xoxoteco, Hidalgo (fig. 7.6).³⁴ In fact, in these murals each of the women is shadowed by a devil speaking and gesturing to her. In one case, the woman is drinking pulque alongside a man—also with a devil behind him—who is handed a gourd by a third individual.

To return to Book 11 and the chapter dedicated to different types of buildings, we find the sole representation of Christ in the entire Florentine Codex, in an image of a shrine called Totecujo Ichan, or House of Our Lord (fig. 7.7)³⁵ Several authors have noted the influence of Chris-

FIGURE 7.5. Templo Mayor with devils. Florentine Codex, Bk. 11, fol. 240v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

tian iconographic models on the *tlacuiloque* who painted the vignettes in the Florentine Codex. Thus, it is clear that Christian models have been used to depict the representatives (*ixiptlahuan*) of the fire god *Ixcozauhqui*—in this case the figure of *ecce homo*—and of *Tezcatlipoca*,³⁶ as well as for a curing scene, in which the *tlacuiloque* used a model of a *pietà*, or “lamentation” (fig. 7.8).³⁷

Given the host of native gods and faced with the ample semantic field of the word *teotl*, Sahagún not only set about the task of refuting the divine character of members of the Nahuatl pantheon but also attempted to define and censure the indigenous concept of *teotl*. Thus, when speaking of

FIGURE 7.6. Temptation scene with devils. Mural, Santa María Xoxoteco, Hidalgo. From fig. 54, Juan B. Artigas, *La piel de la arquitectura* (1979). Drawing courtesy of Elbis Domínguez.

the sea, *teoatl*, the Franciscan clarifies this term “does not mean ‘god of water’ or ‘goddess of water,’ instead it means ‘water wondrous in depth and grandeur.’”³⁸ Sahagún explains that the indigenous people thought the sky and the water met in the sea—expressed by the term *ilhuicaatl* (sky water)—but that “now that the faith has arrived, and they now know that the sky does not meet the water or the land, and therefore they call the sea *hueiatl*, which means ‘great and fearsome and raging water.’” In the Nahuatl section, the Franciscan’s prudent collaborators return to the same interpretation: “It is called *teuatl*, not that it is a god; it only means wonderful, a great marvel.”³⁹ The indigenous authors also cite and explain the name *ilhuicaatl* to refer to the sea, and they conclude: “But now, because of

the true Faith, it is only called 'uei atl' [great water]."⁴⁰ The reader might have noted that the "rational" explanation of the change in the nomenclature of the sea employed by Sahagún—that the indigenous people realized their error in thinking the sea met the sky—vanished in the Nahuatl text. Indeed, his collaborators attributed the change from *teotl* to *uei atl* solely to the imposition of the new faith.⁴¹

Another significant example of the use of words with the *teotl* prefix appears in the Nahuatl text of Book 11, where the Nahua authors describe gold, *coztic teocuitlatl*, as follows:

They named it "the excrement of the sun"; it was very yellow, very wonderful, resting like an ember, like molten gold. So it appears that [the name] gold is taken from this. It is not from God. It is said that this is the sun, for the only God, the true God, was not yet known; for many gods were worshipped. And "sun" was really the name of a god. It was said, "The god comes up; the god is in the middle; here is the god; the god leans on his side; the god enters." *Teotlac* is still said today; it means "the god [the sun] has entered, has set."⁴²

It is not known why Sahagún did not deem it necessary to translate or comment in Spanish on this Nahuatl passage describing gold as a divine substance. The fact is that in the left parallel column, facing the Nahuatl text cited above, after briefly stating that gold is found in mines and

streams, the Franciscan shifts his attention to describing the uses of sticky materials such as *chapopotli* (tar) and *ulli* (rubber).⁴³ Be that as it may—despite the friar's shame over his people's greed—the Nahua testimony on gold reinforces the same meaning they attribute to the word *teotl*, although they offer additional details to support their argument. Essentially, they explain how the name *teocuitlatl* is not related to the concept of deity—which they name *ipalnemoani*, "He for whom everyone lives"—but instead to the sun, *tonatiuh*, while the sole god, the true god, "in jcel teutl, in nelli teutl," was not yet known and many gods (*mjequjntin teteu*) were venerated. In addition to assuming—as I will show—that the term *ipalnemoani* was applied to the Christian God, the Nahua collaborators divest the use of the word *teotl* applied to the sun god of any sacred significance. In fact, they conclude, "*Teotlac* is still said today; it means 'the god [the sun] has entered, has set'" (*teutlac noma mjtóa in axcan, qujtoznequj onac, oncalac in teutl*); in other words, they present this appellation for the sun as a simple lexical phenomenon deprived of any sacred connotations.

Sahagún persisted in his efforts to limit the semantic field of the word *teotl* and its manifold meanings. In the prologue to Book 11, the Franciscan warns in more general terms:

This work will also be timely to inform the natives of the meaning of created things, that they not attribute divinity to them, because whatsoever creature they see as being eminent in good or in evil they called *teotl*, which means god. So they called the sun *teotl* because of its beauty; likewise the ocean because of its grandeur, its fury; and also they called many of the animals by this name because of their frightening aspect and ferocity. From this it is inferred that this name, *teotl*, is taken as good and as evil. And this is much better recognized when [the term] is in a compound: as in the name *teopiltzintli*, a very handsome child; *teopiltontli*, very mischievous or bad boy. Many other words are compounded in this same manner, from the meaning of which it can be conjectured that this word *teotl* means a thing consummate in good or in evil.⁴⁴

The compound example that Sahagún chose to illustrate the ambivalent meanings of the word *teotl* is surprising. In effect, it would seem that the difference in meanings between *teopiltzintli* (handsome child) and *teopiltontli* (bad

FIGURE 7.8. Curing scene modeled after the pietà. Florentine Codex, Bk. 11, fol. 166r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

boy) may be attributed more to the positive and negative connotations of the suffixes used, *-tzintli* and *-tontli* in these cases, than to the supposed semantic valence of the prefix *teo-*.⁴⁵

Nevertheless, in another part of his work Sahagún criticizes the way that the natives have attributed divinity to the dead, especially to their deceased rulers: “And when one of them died, they used to say of him that he was now *téutl*, which means that he was now dead to be a god spirit. And the ancients believed, deceiving themselves, that the lords, when they died, became gods, which they used to say because the lords that ruled them were obeyed and feared.”⁴⁶ In other words, just as the devils tricked men into venerating them, the pre-Hispanic rulers sought deification so their subjects would fear and obey them.

The phenomenon that consisted of deifying mortals—which Sahagún condemned—also gave rise to the warning of the first twelve Franciscans when they spoke with the *tlamatinime*, the Nahua wise men, in the famed *Coloquios de los doce* (1564): “we are also people, we are like you, in no way are we gods” (no titlaca in anjuhque amehoantin, amomā titeteu).⁴⁷ Later in the same work, emphasis is also placed on the humanity of the pope in Rome, described as “also mortal, transitory” (no miquijnj, poliujnj).⁴⁸

On the subject of the divinization of mortals, it is important to introduce Sahagún’s use of an interpretative scheme that came from Euhemerus, a Greek writer born around 316 BCE. In his work entitled *Hiera anagraphē* (Sacred history)—one of the first books translated into Latin—Euhemerus describes a journey of initiation to the island of Panachea. There a golden column was found bearing an inscription that associated the feats of several individuals with the names and origins of deities. According to this inscription, Zeus had been a wise king, Aphrodite a courtesan of the king of Cyprus, Athena a warrior queen, Saturn a king of Latium, and so forth. All the Greek gods were in fact outstanding historical figures who were later deified. Euhemerus’s work met with great success in antiquity, but above all at the beginning of the Christian era. In fact, apologists and later fathers of the Church—Clement of Alexandria, Lactantius, Tertullian, Saint Augustine, and others—used Euhemerus against the pagans to demonstrate the falsity of their gods.⁴⁹

Elsewhere I have emphasized Sahagún’s use of Euhemerus’s theory, above all in Book 1 of the Florentine Codex, to disparage the native gods with claims of their mortality.⁵⁰ For example, the Franciscan claimed that

the god Paynal was merely “he who, being a man, was worshipped as a God”; similarly, Opochtli was included among the gods known as *tlaloque*, “even though they knew that he was completely human”; as for Quetzalcoatl, “even though he was a man, they regarded him as a god.”⁵¹ In the same way, Sahagún identified Huitzilopochtli and Quetzalcoatl with the deified hero Hercules as another means of highlighting their human origins.⁵² Additionally, Sahagún compares the priestly ruler Quetzalcoatl of Tula to “King Arthur among the English.”⁵³ In his further appropriation of Euhemerus’s theory, Sahagún notes the case, which he regards as extreme, of the “goddesses called *cihuapipiltin* [that] were all the women who died in their first childbirth and who were canonized as goddesses.” And the Franciscan exclaims, not without a touch of misogyny: “This adoration of women is something worthy of mockery and laughter, so there is no need to speak of the confutation of the Holy Scripture by the authorities.”⁵⁴

It is equally significant that Sahagún, as well as other friars, appropriated the term *teotl* to refer to the Christian god.⁵⁵ Thus, Sahagún refutes idolatry of the natives in the appendix to Book 1, using the term “*yn izel teutl ipalnemoanj dios*,” or “the only god, He for whom everyone lives, God,” joining the Spanish word *Dios*, or God, with the terms *teotl* and *ipalnemoani*, the latter of which is employed to refer to the supreme deity and on occasion to Tezcatlipoca and Quetzalcoatl.⁵⁶ After this explication of the Christian God, Sahagún enumerates the Nahua deities, specifying for each one *ca amo teotl* or *amo teotl*, which means “he is not a god.” Similarly, he dismisses the sacred nature of the celestial bodies, such as the sun and moon, the stars, and the earth, as well as the sea.⁵⁷

In another work, the *Coloquios de los doce* (1564), Sahagún goes further in this appropriation by explaining, ostensibly in the words of the twelve Franciscans who first confronted the amazed Nahua priests, that the indigenous people did not know *Ipalnemoani*, *Tloque Nahuaque*, the true God, the *nelli teotl*: “In truth all of them whom you have held as gods, none of them is God [*teutl*], none is He for whom everyone lives [*ypalnemoanj*], because all of them are devils [*Diablome*].”⁵⁸ Using the same nomenclature that is applied to the supreme deity, the friars established that the god of the conquerors “is truly God, *Tloque Nahuaque*” (*Ca nel dios tloque navaque*).⁵⁹ As Berenice Alcántara Rojas explains, “By making these terms [*teotl*, *Tloque Nahuaque*, *Ipalnemoani*] their own, the authors of the *Coloquios* wanted to disassociate the native words

from their ancient recipients and to reconnect them to the Christian divinity, as had occurred in other times with the word *deus*.”⁶⁰

The European schema followed by Sahagún and his Nahuatl collaborators to describe the ancient gods was also expressed in the order they chose to present them, especially in Book 1 of the Florentine Codex. I have proposed that the division of the pantheon adopted by the Nahuatl collaborators into major gods, major goddesses, and minor deities corresponds more closely to a Western scheme than to an indigenous classification.⁶¹ A tripartite division is also applied to the deities of the Roman pantheon in the sixteenth-century works of Bartolomé de Las Casas and Juan de Torquemada, both authors explicitly citing Saint Augustine’s *City of God* as the source for this model. Far from corresponding to an indigenous way of classifying the gods, the taxonomy in Sahagún’s work also follows a model inspired by Saint Augustine’s *City of God*, a model that has been reproduced by most of the contemporary scholars without questioning its Western origins. To understand the autochthonous divine taxonomies, it is necessary to clarify the diverse ways of ordering the gods in pre-Hispanic religious codices—as patrons of days, of the *trecenas*, lords of the days or thirteen gods, of the night or nine gods, and so forth.⁶²

Nonetheless, indigenous conceptions concerning the gods are clearly reflected in certain Nahuatl materials compiled by Sahagún, such as the sacred hymns (that the Franciscan certainly did not translate), prayers, and diverse fragments. It is unfortunate that a short section in the *Primeros memoriales*, “in which are named what were attributed to the gods,”⁶³ was not developed further in the Florentine Codex. It contains extremely brief definitions applied to the deities; for example, the section on Huitzilopochtli reads, “He nourishes people. He makes people rich. He makes people wealthy. He makes people rulers. He is wrathful with people. He kills people.”⁶⁴ This description corresponds well with the dual, simultaneously positive-negative vision that the ancient Mexicans had of their gods. For other numina, simple phrases appear, such as in the case of Tlaloc: “He rains. He thunders. He strikes [with lightning].” Other gods are described with a single word: blood (*eztli*) for Atlahua, adultery (*tetlah-ximaliztli*) for the *cihuateteo*, fire (*tletl*) for Ixczahui-Xiuhtecuhtli, pulque (*octli*) for eight different gods of this inebriating brew, and the list goes on. This brief enumeration of attributes in some way defined the essence or the

most outstanding features that the Nahuas attributed to these deities.

Book 1 of the Florentine Codex also includes other interesting descriptions: for example, Tezcatlipoca “was considered a true god” (*ynin vel teutl ipan machoia*); and of Chalchiuhtlicue, Tlaloc, and Xiuhtecuhtli, it is said of each one that “He [or She] was considered a god” (*Teutl ipan machoia*).⁶⁵ For reasons that would be worth pursuing in a more in-depth study, other deities do not merit these identifying traits of divinity.

In the first place, Huitzilopochtli is defined as “only a common man, just a man” (*çan maceoalli, çan tlatcatl catca*); Cihuacoatl, “a savage beast and an evil omen . . . like a court lady” (*tequanj yoan tetzaujtl . . . tecpan cioatl*); and the *cihuapipiltin*, “These were five devils, whose images were of stone” (*Diablome catca y, macujltin, teme yn jmixiptlaoan*).⁶⁶ Other comments more closely approach indigenous conceptions, such as the identification of deities as natural elements defined as the essence of their own bodies: water for Chalchiuhtlicue, corn for Chicomecoatl, turpentine for Tzapotlan Tenan.⁶⁷ Deities were also associated with specific towns or social groups: Macuilxochitl and Xochipilli, “gods of the palace folk”; Opopochtli, “the god of the waterfolk”; Xipe Totec, “god of the seashore people, the proper god of the Zapotecs”; Yacatecuhtli, “god of the merchants.”⁶⁸

A fragment from the *Coloquios de los doce* reveals a discourse in which the *tlamatinime* (wise ones) explain the principal characteristics of the gods they venerate:

The gods are for whom one lives, they were worthy of us . . . they give us our sustenance, our food, everything that we drink, eat, what is our flesh, corn, beans, amaranth, chia. They are whom we ask for water, rain, from which things are produced on the land. They themselves are rich, they are happy, they have things, they are owners of them. . . . They also give people courage, authority, taking captives in war, the ornament for lips, that which is tied, loincloths, capes, flowers, tobacco, jade, quetzal feathers, gold. . . . Because in this way in our heart [we understand] who is the giver of life, who is the giver of birth, who is the giver of growth, who is the giver of development. That is why [the gods] are invoked, they are supplicated.⁶⁹

In addition to the origin of life, sustenance, and the power of growth, the *tlamatinime* attributed to the gods the ori-

gin of their social customs, from political power and social hierarchy to warfare and sacrificial practices. The wise men also emphasized the “riches” and “happiness” of their gods, as well as the necessary reciprocal homage of the human devotees.

These reflections lead us to the polemic surrounding the possible divinization of the Spaniards, who in Book 12 of the Florentine Codex, as well as in other sources in Nahuatl, are called *teteo*, or gods.⁷⁰ No doubt the Spaniards thought they could benefit from this opinion, as revealed by fray Toribio de Benavente, or Motolinía:

The Spaniards were called *tetehuv*, which means gods, and the Spaniards corrupting the word used to say *teules*, the name that was used for them for three years, until it became clear to the indigenous people that there was no more than one God and that the Spaniards were called Christians, to which some headstrong Spaniards took offense and complained, and indignant against us they said that we robbed them of their name.⁷¹

From the work of Francisco Clavijero, some scholars have argued that the name of “teules” given to the Spaniards was equivalent to *teuctli* or *tecuhli*, “noble.”⁷² It is true that the words *teotl* and *tecuhli* seem to be interchangeable in names of deities such as Omoteotl, Ometecuhli, Tlalteotl, Tlaltecuhli, Meteotl, Cinteotl, Cihuateotl, Mictlantecuhli, and Tlahuizcalpantecuhli, among others. Nevertheless, this identification of the conquerors with deities is documented among other groups of diverse languages, both in Mesoamerica and in other parts of the American continent.⁷³ For example, when the Spaniards led by Pedro de Alvarado reached Iximche, the Kaqchikel capital, they were seen as gods: “Thus it was when the Spanish people arrived long ago, you my sons! In truth, it was frightening when they arrived; their faces were not known. The lords perceived them as divine beings. We, your fathers, perceived them thus, we who truly saw their arrival at Iximche.”⁷⁴

Instead of judging the process of deification of their conquerors as degrading for indigenous people,⁷⁵ it seems more appropriate to follow James Lockhart’s hypothesis that regards it “as another attempt to include the intruders within the existing framework and bypass (thus implicitly denying or obscuring) the notion of radical distinctness.”⁷⁶ In point of fact, the semantic field of the word *teotl* was

sufficiently broad for the Nahuas to be able to apply it to the Spaniards. Moreover, and this seems to be essential, the native perception of their gods was highly distinct from Christian conceptions. It is worth noting that in Mesoamerica it was customary to negotiate with the gods, to beseech them and give them offerings, as well as to threaten, trick, or insult them.⁷⁷ It was also possible to confront a divine apparition, fight with it, and even defeat it. In Book 4 of the Florentine Codex the almighty Tezcatlipoca could be the recipient of insults on the part of penitents or warriors who accused him of causing their diseases, or of having allowed a captive to escape.⁷⁸ Similarly, in Book 5 the Lord of the Smoking Mirror appeared on a mountain as a giant or a decapitated man with his chest cut open. Although some fled, terrified by this apparition, other brave warriors or priests confronted it and were able to firmly grasp the giant or the heart of the decapitated figure. After forcing the apparition to speak, the valiant one was rewarded by Tezcatlipoca with a gift of four agave spines, symbolizing the prisoners that he would capture on the battlefield.⁷⁹

As these examples suggest, describing the Spaniards as *teteo* did not imply an attitude of submission or defeat. Supporting this interpretation, Molly Bassett observes that by donning the divine attire sent by Motecuhzoma, Cortés became an *ixiptla* (god surrogate), a status that implied “the possibility that he could be revered and/or sacrificed” (fig. 7.9).⁸⁰ A similar explanation can be applied to why the *cazonci*, or king, of the Purépechas in Michoacán “had the Spaniards adorned, as they adorned their gods: with gold garlands and they put their gold bucklers on the neck and each one was given an offering of wine, in large cups, and offerings of amaranth bread and fruit. The *cazonci* would then say: These are gods from the sky.”⁸¹ Right before dressing the newcomers as gods, the Purépechas threatened them as follows: “the *cazonci* sent all his men, their skin blackened, to hunt, a considerably large number of people, to frighten the Spaniards and with many bows and arrows and they took many deer and gave the Spaniards five deer.”⁸² This demonstration of power deployed by the *cazonci*—in which one should remember that the act of hunting is equivalent to an act of war⁸³—clearly demonstrates the absence of any attitude of submission on the *cazonci*’s part, even though he identified the Spaniards as divine beings. Kevin Terraciano proposes that the Nahuas perceived Cortés as a “furious and terri-

FIGURE 7.9. Cortés and divine attire sent by Motecuhzoma. Florentine Codex, Bk. 12, fol. 8v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

fyng *teotl*,” which supports the preceding hypothesis.⁸⁴ In fact, were not Huitzilopochtli and Tezcatlipoca also deceitful and bloody warrior gods?

Significantly, we can add the fact that the conquerors came from the sea, *teoatl*, “divine water,” used beards like the sun god (*teotl*), wore strange attire, and brought with them ships, horses, and weapons, which made the Spaniards exceptional beings that fit perfectly into the broad category of *teteo*.⁸⁵ At the same time the application of the term *teotl* to the conquerors might be related to their identification as envoys or followers of Quetzalcoatl.⁸⁶ For instance, according to Alonso de Zorita’s chronicle, prior to the arrival of the Spaniards the indigenous people “would say that their god Queçacouatl [Quetzalcoatl] was soon to come and that he would bring *teucalles* by sea, but when they disembarked they [the natives] said there were many gods, this was said of the Spaniards and in their language they called them *miequeteteuth* [many gods].”⁸⁷ Returning to the Florentine Codex, one finds that the Toltecs claimed, “There is only one god; [he is] named Quetzalcoatl.”⁸⁸ In addition, if one hypothesizes that the Spaniards were somehow regarded as Toltec followers of Quetzalcoatl, it would be necessary to take that into account

when the Toltecs were among them: “They addressed one as ‘the god, my elder brother; the god, my younger brother.’”⁸⁹

These observations contributed to a debate over the concept of “deity” among the ancient Nahuas.⁹⁰ Bassett details the number of Nahuatl terms associated with the word *teotl* in the Florentine Codex:

According to *teotl*’s use in the *Florentine Codex*—both in overtly religious contexts and seemingly nonreligious ones—*teotl* does indeed mean “god,” but the older Nahuatl concept of *teotl*-as-god conveys a culturally specific set of criteria and meanings. *Teotl* is never the monotheistic God, the polytheistic gods, nor simply god. Instead, (1) a *teotl* has *axcaitl* (possessions, property); (2) a *teotl* has a *tonalli* (heat; day sign; fate, fortune, privilege, prerogative); (3) a *teotl* has a *neixcahuilli* (an exclusive thing, occupation, business, pursuit); (4) a *teotl* is *mahuiztic* (something marvelous, awesome, worthy of esteem); and (5) a *teotl* is *tlazohca* (valuable, beloved). Translation of *teotl* as “god” or “deity” should invoke these five properties (*axcaitl*, *tonalli*, *neixcahuilli*, *mahuiztic*, and *tlazohca*).⁹¹

In addition to these terms that nuance the meaning of the word *teotl*—to which Bassett adds, following the example of Arild Hvidtfeldt, that of *teixiptla*—other Nahuatl terms should also be analyzed, such as *yohualli ehecatl*, “night wind,” which is linked to the invisibility of the gods,⁹² and *tetzahuitl*, “omen,” which often describes deities such as Huitzilopochtli and Tezcatlipoca and forms part of the name of a numen, Tetzauhteotl.⁹³ Additionally, López Austin has made the following provocative observation: “[T]here are vestiges of the relationship between blackness and divinity. . . . The Nahuatl word *teotl*, which means ‘god,’ seems to have the value of ‘blackness’ in some compounds.”⁹⁴ According to Karen Dakin’s recent etymological proposal, “the word *teutl* comes from the proto-Uto-Aztecan root **tura*, associated with darkness and the supernatural realm,” which invites one to explore the complex world of the gods of Mesoamerica.⁹⁵

At this stage of research on the term *teotl* in Sahagún’s corpus, it is time to offer a preliminary assessment. First, I have reviewed the abundant nomenclature for the divine that stems from Sahagún’s zeal in exploring the many faces of the pagan gods to prevent natives from adopting

and retaining their names. Although human impersonators of the gods (*ixiptlahuan*) were rendered in vignettes in the Florentine Codex, the systematic process of anthropomorphizing deities visible in the images might be related to the adoption of the Greek theory of euhemerism in order to identify the indigenous numina with deified men. A complementary aspect of this process of identifying Aztec deities with the pagan gods—making them more comprehensible and perhaps less threatening to Europeans⁹⁶—was their assimilation with the multifaceted *diablo* (devil), present both in Nahuatl texts and images of the Florentine Codex. Thus, what is striking is the use of a “demonized” Huitzilopochtli to signify the word *teotl* in glyphic compounds. In the same way, Sahagún’s commentaries on the term *teotl* reveal the missionary’s double-edged strategy: to deny the divine character of members of the Mexica pantheon, while also appropriating Nahuatl terms to define the Christian deity. The Nahuatl collaborators accepted in part the semantic delimitation of the term *teotl* and even added subtle nuances to its divine connotations for certain words, such as those associated with the sun. At the same time, the collaborators assigned to *teotl* the meaning of “god” in the framework of Nahuatl concepts, as well as the richness of its semantic field.

These linguistic elements, in addition to a few texts specifically dedicated to characterizing the Nahuatl deities, shed light on the “nature” of the gods, which permits a more complex interpretation of the application of the term *teteo* to the Spaniards. Far from implying a “superstitious” attitude of submission and defeat, it reveals instead a process of integration into Nahuatl, and other Mesoamerican, cognitive structures. This integrative attitude coincides with one of the principal characteristics that Claude Lévi-Strauss assigned to Amerindian mythological systems, that of containing “a gap” or “a void” (*en creux*), the place of the other, which enabled them to easily assimilate it into their myths.⁹⁷ Inspired by this brilliant proposal, I have analyzed how Mesoamerican accounts adopted and integrated the arrival of the Spaniards into their mythical models and temporal cycles.⁹⁸ Identifying the newcomers as *teteo* fully exemplifies this system of thought.

As a final testimony on indigenous strategies of integration, I return to the subject of the appropriation of a foreign word to name the gods, a phenomenon that I have examined with the Franciscan use of Nahuatl terminology to define the Christian deity.⁹⁹ To the best of my knowledge, scholars have not noticed the existence of an equiva-

FIGURE 7.10. Tezcatlipoca, supreme god of the Nahuatl pantheon. Florentine Codex, Bk. 1, fol. 10r (detail). Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

lent phenomenon in reverse by Sahagún’s Nahuatl collaborators. In fact, in looking for occurrences of the word *Dios*, or God, in the Nahuatl part of the Florentine Codex—in addition to its use in the appendix of Book 1, in which Sahagún refutes in Nahuatl the divine character of the native numina¹⁰⁰—it turns out that the Nahuatl authors used the Spanish word *Dios* on only one significant occasion: to refer to none other than Tezcatlipoca (fig. 7.10). And so one reads with a degree of amazement: “Second Chapter, which telleth how they considered one named Titlacauan or Tezcatlipoca to be a god [*Dios*]; even as an only god [*ce dios*] they believed in him.”¹⁰¹ In this way the indigenous collaborators appropriated the Spanish divine term par excellence—under the very nose of the Franciscan—to define, in their own language, the “Lord of the Smoking Mirror” as their principal divinity.

NOTES

1. Translation to English from Spanish by Debra Nagao; English from Nahuatl passages in Florentine Codex, in Sahagún 1950–1982.
2. Sahagún expresses his admiration for the texts in Book 6 and even describes the prayers dedicated to the pagan gods as “very elegant, very moral phrases. And even those that touch upon the gods and their ceremonies can be said to be very theological.” Sahagún 1950–1982, introductory vol., prologue to Bk. 9, 71.
3. Sahagún 1979, Bk. 11, fol. 47v.
4. Sahagún 1979, Bk. 12, fol. 18v.

17. Sahagún 1950–1982, introductory vol., prologue to Bk. 3, 59.
18. Sahagún 1979, Bk. 6, fol. 28r.
19. Sahagún 1979, Bk. 7, fol. 21r. Some scholars have interpreted this devil as an image of an “idol” or effigy of an indigenous god.
20. Sahagún 1979, Bk. 8, fol. 34r.
21. Sahagún 1979, Bk. 7, fol. 34v; Bk. 10, fol. 41r. On the latter image of the devil near the procuress, see Sousa, chapter 12 of this volume.
22. Sahagún 1979, Bk. 11, fols. 142r, 209v.
23. Thouvenot 1982b, 67–68.
24. This stone, *teotetl*, was also used to create divine insignia (Sahagún 1950–1982, Bk. 2, 161).
25. Sahagún 1950–1982, introductory vol., 87; Sahagún 1950–1982, Bk. 11, 44.
26. Sahagún 1950–1982, Bk. 7, 1; see Bk. 1, 82; and Bk. 11, 233.
27. Berdan and Anawalt 1992, fols. 10r, 16r, 33r, 42r, 46r, 49r, 51r; Seler 1963, 1:153.
28. Boone 1989.
29. Sahagún 1979, Bk. 11, fol. 240v.
30. Sahagún 1950–1982, Bk. 11, 269. Defined by Molina (1970, fol. 153r) as “name of the devil,” the term *tzitzimil* refers to female skeletal supernatural beings that would descend to the earth to devour men at the end of the Fifth Sun. *Coleletli*, “Certain Devil,” according to Molina (1970, fol. 24r), is another term applied to the *tzitzimime* and sometimes to Huitzilopochtli.
31. Boone 1989, 70.
32. Durán 1995, 1: plate 30; Muñoz Camargo 1981, fol. 239v.
33. Some of the devils rendered in the Florentine Codex might be compared, for example, with a diabolical face that appears as the image of a *tzitzimil* in the Codex Aubin (Lehmann and Kutscher 1981, fol. 40r). The word *tzitzimil* is used by Sahagún to describe “devils” venerated by the natives: “*Omnes dij gentium demonja*: that is to say, all whom the idolaters worship, all are devils, *tzitzimime*, *culeletin*” (Sahagún 1950–1982, Bk. 1, 64).
34. Arrigas 1979, 53–55, 64–66.
35. Sahagún 1979, Bk. 11, fol. 243r.
36. Sahagún 1979, Bk. 2, fols. 30v–31r, 103r. See also Escalante Gonzalbo 2003; Klein 2015.
37. Sahagún 1979, Bk. 11, fol. 166r; Peterson 1988, 291–292. On the parallels between the representation of the dead ruler Motecuhzoma II and Christ’s deposition, see Magaloni Kerpel 2003, 38–39.
38. Sahagún 2000, 1134.
39. Sahagún 1950–1982, Bk. 11, 247.
40. Sahagún 1950–1982, Bk. 11, 247.
41. It is worth noting the word *teoatl* is part of an important *difrasismo*, *teoatl tlachinolli* (sea or divine water, conflagration), which means “war,” an expression employed repeatedly in the Florentine Codex and in other indigenous sources (Alvarado Tezozómoc 2001, 285). Other interpretations of the *difrasismo* silence its religious and sacrificial dimension or, conversely, refer to the *teoatl* as sacrificial blood (Seler 1963, 1:14, 90; Garibay K. 1953–1954, 1:101, 2:409; Quiñones Keber 1989; and Wright Carr 2012).
42. Sahagún 1950–1982, Bk. 11, 233.
43. Sahagún 1979, Bk. 11, fol. 213v.
44. Sahagún 1950–1982, introductory vol., prologue to Bk. 11, 87.
45. Garibay K. 1978, 54–55; Sullivan 1992, 38–41. According to Garibay (1978, 55), *piltzintli* means “venerable hijito,” and *piltontli*, “hijuelo, hijillo.”
46. Sahagún 2000, 974–975. Motolinía (1971, 39) confirms that “they called all their dead *teutlh* [teotl] so and so, which means god or saint.” As for the ancient Mixtecs, fray Antonio de los Reyes (1890, 19) states, “For the dead they also have a different designation, which is: *ñu Andres*, *ñu Domingo*, the dead Andres, Domingo.” Although the friar claimed that the word *ñuhu* means “earth,” Maarten Jansen (1982, 308) proposes it can also be translated as “god,” which would suggest a “divinization” of the dead, similar to what is mentioned in Nahuatl sources. Mixtec is a tonal language in which the same “word,” when written in the Roman alphabet, can actually refer to very different (and unrelated) words differentiated by tone (Kevin Terraciano, personal communication, June 27, 2016).

50. Olivier 2016, 176–179; see also López Austin 2002.
51. Sahagún 2000, 70, 73, 97.
52. Sahagún 2000, 308; 1906, fol. 34r; 1979, Bk. 1, fol. 10r.
53. Sahagún 2000, 719.
54. Sahagún 2000, 78–79, 122.

55. Burkhart 1988; Alcántara Rojas 2007, 146; 2008, 179–183. As far as I know, the first to use the term *teotl* for this purpose was fray Pedro de Gante (in Morales 2011, 61). In a 1529 letter, he bade farewell to his Franciscan brothers with this Nahuatl expression: “Ca ye ixquich ma moteneoa in toteh in totlatocauh in Jesu Christo” (Otherwise I have nothing more to say, may Our Lord and his blessed Son Jesus Christ be praised). A similar phenomenon arose among the colonial-period Mayas, who roughly equated *Dios* and *ku* used in reference to non-Christian divinities as well as the Christian god (Hanks 2010, 357).

56. Sahagún 1950–1982, Bk. 1, 63.

57. Sahagún 1950–1982, Bk. 1, 67–76.

58. Sahagún 1986, 175.

59. Sahagún 1986, 164–165.

62. On the organization of Maya gods in pre-Hispanic codices, see Vail 2000.

63. Sahagún 1993b, fols. 270v–271r; Sahagún 1997, 121.

64. For this and the following deity descriptions, see Sahagún 1997, 121–122.

65. Sahagún 1950–1982, Bk. 1, 5, 21, 29; Bk. 7, 17.

66. Sahagún 1950–1982, Bk. 1, 1, 11, 19.

67. Sahagún 1950–1982, Bk. 1, 13, 17, 21.

68. Sahagún 1950–1982, Bk. 1, 31, 37, 39, 41.

69. Sahagún 1986, 150–153.

70. Some scholars claim that the sources in which the Spaniards are called “gods” (*teteo*) are “late,” and probably were manipulated by the conquistadores. Yet there are mid-sixteenth-century sources, such as the *Anales de Tlatelolco* (Klaus 1999, 39, 41, 43, 45, 141, 143; Terraciano, chapter 3 of this volume). Moreover, in an Inquisition court case dated 1539, a witness confessed, “[T]he gods had to arrive, this is how they referred to the *xpianos* [Spaniards]” (González Obregón 1912, 183).

71. Motolinía 1971, 171.

72. Clavijero 1987, 303n14. Guzmán in Cortés 1958, 146–147; Pastrana Flores 2004, 113–117. In Peru the Spaniards were called “Viracochas”—the name of an Inca deity identified with the Christian God (Duviols in Pachacuti Yamqui Salcamaygua 1993, 30, 53; Itier 2013). In fact, “[a]lready, by 1560, the equation of Spanish and the god Viracocha was so generally accepted that Domingo de Santo Tomas, in the first Quechua dictionary, translated *viracocha* as ‘Christian’” (Harris 1995, 13). On the continuing usage of *wiraqucha* in many Quechua dialects to mean “gentleman, sir from a high social class,” see Itier 2013, 35.

73. Wachtel 1971, 49–51. Describing the arrival of Pedro Álvares Cabral on the coast of Brazil in 1500, fray Vicente do Salvador (1889, 5) commented, “[T]he weapons were not necessary, because just from seeing clothed men with shoes, white, and with beards (all of which they lack), they took them as divine and more than men, and in this way, calling them ‘caraíba,’ which means divine thing in their idiom, they came peacefully to our men.”

74. Maxwell and Hill 2006, 260. Matthew Restall (2003, 115) rejects the idea that the indigenous people regarded the Spaniards as gods, saying rather that the original Kaqchikel phrase suggests a figurative meaning. I beg to differ. In any case, the Kaqchikels used the word *kab’owil*, which fray Tomás de Coto (1983, 168) lists in his seventeenth-century dictionary under the following entry: “Divine, thing: . . . In ancient times they used to say: *qabovilal*, from *qabovil*, name of the god they venerated.”

75. For example, Townsend (2003). This author, along with Restall (2003, 120)—who claims that “[t]he Spaniards-as-gods myth makes sense only if natives are assumed to be ‘primitive,’ childlike, or half-witted”—does not take into account indigenous conceptions concerning the notion of divinity (see also Terraciano, chapter 3 of this volume) and their capacity to integrate “the other” into their models of explaining the world.

PART III

ORDERING THE COSMOS

FIGURE 8.1. Map of the Basin of Mexico. Olga Vanegas.

Ecology and Leadership

Pantitlan and Other Erratic Phenomena

BARBARA E. MUNDY

The environment of the Basin of Mexico (fig. 8.1) was as life giving as it was lethal. Situated in the temperate highlands of Mexico, the basin yielded bounties of maize, amaranth, chilies, and squash, but lacking a natural outlet for its abundant waters, its summer rains were both needed and dangerous. A great flood engulfed the island cities of Tenochtitlan-Tlatelolco in 1499; by the end of the 1530s, drought would grip the basin, followed by yet another flood in 1555. Bernardino de Sahagún and his collaborators in the creation of the Florentine Codex, island residents all, were keen observers of this environment, and as a result they left us a natural history of the world around them of unparalleled richness in Book 11. But the Nahuatl men who gathered around the Franciscan scholar were more than observers. They were elites and governors as well, and thus the Florentine Codex also registers Nahuatl ideas on the proper role of leaders.

Environment and rulership were not separate domains, as Nahuatl rulers not only were leaders of people but also were charged with keeping the relationship to the natural world in balance. Most famously reported in Book 12, when the *huei tlatoani* Moteuczoma learned of the surprising appearance of comets, lightning, and flood, he responded with the appropriate ritual action to set an unbalanced world back to rights. That his actions failed to prevent his own assassination and the invasion of the island by hostile (and largely indigenous) armies under the lead of Hernando Cortés did not mean that two generations later, as Nahuatl elites gathered to discuss Sahagún's

queries, the special linkage between the ruler and the natural world had been severed. Instead the Florentine Codex presents us abundant evidence that its Nahuatl collaborators were still puzzling out the ceaseless and unfolding pattern of environmental threat and ritual reaction. In this chapter, I focus on two moments of environmental aberration recorded in the Florentine Codex that document cycles of threat and reaction, to argue that the Nahuatl fascination with the environmentally aberrant—an unsurprising interest given the temperamental environment—continued to be linked to ritual intervention and the need to appease potentially destructive forces. These moments are to be found in Books 1 and 11: the first, an account of the great whirlpool/drain of Pantitlan that lay in the eastern lake of Texcoco, and the second, the abnormal behavior of the *acuitlactli* (water bear), a small furry animal with an aquatic habitat. These episodes are particularly notable for the images that accompanied them, images that are more than mere illustrations of the text, as is argued throughout this volume, and are equally rich sources of information provided by the book's creators.

Diving into the watery microenvironment in and around the island cities of Tenochtitlan-Tlatelolco allows a better purchase on the actual conditions of the book's genesis. More important, it accompanies a shift of our frame of interpretation to *emplacement*, by which I mean a focus on the immediate, physical context of the work's creation. This interpretative frame attempts to move beyond the polarities that structured an earlier body of scholarship, as seen in the next section. So obvious as to be largely

unmentioned, Sahagún and his informants were all residents of the same place, the Basin of Mexico; by the time that they compiled the *Primeros memoriales*, Sahagún had spent more of his life in New Spain than anywhere else, and likely more time in the company of his Nahua collaborators than his Franciscan brothers. Ellen Baird captures some of the social dimensions of emplacement in describing their late-life intimacy—both intellectual and physical—as they found shelter from the plague, from old age, from threatened obscurity, within Tlatelolco’s sturdy walls.¹ Certainly in creating the Florentine Codex they all were “navigating the terrain between cultural traditions” (in Peterson’s phrase),² but that terrain was not a *terra incognita*. It was home.

INTELLECTUAL FRAMEWORK OF THE FLORENTINE CODEX

Authorial control of the text has been of major concern to past scholars.³ How much of the book is the work of Sahagún? How much is the work of the Nahua informants? In the past, scholars have tended to argue along binaries, pitting ethnicity (Spanish/Nahua) or temporalities (pre-Hispanic/modern Europe) against each other, setting different parts of the text along a spectrum, one end deriving from the purely Nahua (meaning oral and/or pictorial and pre-Hispanic) and the other from the purely Spanish (meaning alphabetic and contemporary European). At one end are set relatively unmediated Nahua orations like the *huehuetlatolli* of Book 6. Thelma Sullivan, a major scholar of Nahuatl, claimed that no other part of the Florentine “is as rich in language or as revealing of the pre-Hispanic Indian mind and thought as [these] rhetorical orations.”⁴ Set at the middle of the spectrum are the texts “where the informants answered under pressure of a [written] questionnaire” that Sahagún used to elicit responses, whose formats Alfredo López Austin elucidated in a 1974 article.⁵ At the other end of the spectrum are set the Spanish-only texts authored by Sahagún alone, which are often found as prologues or “*confutaciones*” in the text. Scholars pursuing the nature of the Florentine’s sources have mapped them along complementary binaries: Do pre-Hispanic models predominate? Do imported European ones?

This volume offers abundant evidence that the Florentine is the result of a close collaboration between Sahagún and the Nahua men he gathered around him, rather

than a product of one individual author, a category itself made considerably more capacious by poststructuralists. But polarities continue to color scholarship (Spanish Sahagún / European source / modern alphabetic text versus Nahua informants / indigenous source / pre-Hispanic pictorial manuscript or oral account). They have the danger of obscuring how much of the Florentine Codex was the product of mutual interests and shared habitus of the Nahuatl-speaking, Spanish-born intellectual and his Spanish-speaking Nahua counterparts; they also tend to constrict an understanding of the breadth of the currents that colored intellectual discourse on both sides of the Atlantic in the sixteenth century, currents in which those men sitting together in convent libraries were eager to participate. To parcel out the content of images along the same binaries also tends to obscure their innovative nature and the shared emplacement of the work’s creators. Both innovation and emplacement are seen in the ways the authors (by which I mean Sahagún and his Nahua collaborators) registered responses to local and immediate phenomena.

Rather than tracing the ideas to either expressly “Nahua” or expressly “European” beliefs, heuristic categories in themselves, I see them as localized expressions of relevant ideas that were shaped by habitus. Sahagún and his collaborators all lived within the same city and were responding to the same changes in the local environment. They had access to the same libraries and would have shared in the same confessional practices. And the material that was included in the Florentine Codex had to have been of interest to all of them: while Nahua collaborators were directed by the standardized format of the questionnaire that Sahagún used, at many junctures they expounded freely, expositions that Sahagún included in the final text. The same is true of disruptions to the prescribed format of the page that dictated both the bilingual columns as well as the sizes of the images. Just as with the texts, a moment in which the otherwise even format of the page is ruptured by the image is where the unique and extraordinary phenomenon finds expression. These moments of rupture were ones particularly important to the text’s creators, who saw fit to include them.⁶

There is no better place to explore emplacement than in the authors’ collective preoccupation with the surrounding environment, evidenced in their decision to include a natural history and in the depth and complexity of the text and its images of Book 11. In doing so, they set “*las cosas*

de Nueva España” into a format suggested by the books of the ancients. (And who is to say that don Antonio Valeriano, fluent in Latin, steeped in classical texts, could not claim Pliny as a *tlamatini*?) An analysis centered on the images reveals which environmental phenomena preoccupied these elite authors at late century; the images’ iconographic content and composition allows me to show the ways that elites underscored their roles as environmental custodians, key intermediaries between the populace and the fickle environmental conditions that the basin subjected them to. Nahua elites had played this intermediary role before the conquest, and the ones gathered within the great Franciscan monastery of Tlatelolco were actively re-framing their roles to respond to new environmental challenges and to resonate within Christian parameters, the latter best seen in the artists’ use of color.

ELITES AND THE SHAPING OF THE LOCAL ENVIRONMENT

As can be seen in the map in figure 8.1, Tlatelolco and its sister city of Tenochtitlan sat on an island in the middle of a system of lakes, which through careful engineering projects carried out under Mexica rulers during the fifteenth century, and by other *altepetl* in the basin, had been transformed into a veritable paradise. On the map, which reconstructs the system as it existed from 1500 to 1519, one can see a dike and causeway stretching across the bottleneck formed by the skirt of the hill of Huixachtlan (known today as Cerro de la Estrella) near Culhuacan, which resulted in a careful corralling of fresh water in the southern lakes. This dike, as well as ones built to the north and south of the island of Mexico, where Tenochtitlan and Tlatelolco were situated, allowed for the buildup of a massive system of chinampa agriculture to provision the basin’s burgeoning population, estimated at some quarter of a million people in 1500. The Nezahualcoyotl dike, to the east of the island, further protected the system from flooding coming from the salty Lake Texcoco. While the important sixteenth-century historical sources from the basin have always underscored the unpredictable, and sometimes violent, nature of the city’s surrounding waters in the fifteenth century and onward, modern archeological data has further confirmed the extensive manipulation of the lacustrine environment, the engineering marvels of the basin’s indigenous peoples. The Florentine Codex was clearly inflected by these local conditions: imagery record-

FIGURE 8.2. Number of images showing water in each of the twelve books of the Florentine Codex.

ing water in some fashion accounts for 204 images, about a quarter of the book’s total, and more than half of these appear within Book 11, as the table in figure 8.2 shows.

Through the fifteenth century, as histories of the basin underscore, pre-Hispanic Mexica rulers positioned themselves as custodians of the surrounding basin environment.⁷ In particular, they made the island habitable and increased lands for cultivation by sponsoring two kinds of infrastructure projects to deal with the city’s waters: huge dikes and causeways were constructed in the lake bed around the city, both to connect the city to neighboring communities and, more importantly, to control the ebb and flow of water during the rainy and dry seasons; in addition, aqueducts were built to provision city residents with fresh water, as scholars such as Ángel Palerm and Luis Gonzalez Aparicio have established.⁸ During the rainy season, the waters flooding into Lake Xaltocan, Lake Zumpango, and the salty Lake Texcoco threatened to engulf the city in salt water; during the dry season, enough water needed to enter the system to keep open vital canal routes to provision the city. Solid causeways planked out across the lakes to the mainland to connect neighboring *altepetl*, parceling the lake up into smaller and more manageable sections, and openings in the causeways allowed regulation of the water flow between sections. Such massive infrastructure projects were often connected to ruling elites. Notably, two of the most important projects bore the names of sponsoring rulers: the great dike of Nezahualcoyotl, which was the main bulwark against saltwater flooding from Lake Texcoco, was named for ruler of the *altepetl* of Texcoco (r. 1431–1472); the dike of Ahuitzotl, which further protected the eastern flank of the island of

Tenochtitlan-Tlatelolco, took the name of its Mexica *huei tlatoani* (r. 1486–1502).

After the conquest, the crucial role of elites did not come to an end; they were the ones who possessed the technical know-how as well as the ability to manage the huge labor gangs necessary for water-management projects. Two examples will suffice to make the point. During the siege of the city in 1521, the conquistador Cortés broke the pipes from the springs at Chapultepec, starving the city into submission;⁹ in the aftermath of the war, it was the Mexica nobility who stepped in to rebuild the city, including, in all likelihood, provisioning it with water.¹⁰ In 1555, a catastrophic flood engulfed the city. Thousands of workers were marshaled to reinforce dikes that the Mexica had carefully engineered but that the Spanish-run government of the city had neglected. The viceroy, don Luis de Velasco, called in indigenous leaders to help him confront the crisis, and an indigenous account in the Codex Osuna underscores the crucial role that the indigenous labor force, organized by indigenous elites, played in rebuilding the dikes.¹¹ These are but two examples of the continuing role native elites played in maintaining the water infrastructure.

These roles were not only practical; they were also ideologically charged, in that human communities were conceived of as continuous with the environment. Such continuity is indicated by the Nahuatl term *altepetl*, combining words for “water” and “hill.” Hills and mountains were conceived of as the containers of water, and water was crucial for agriculture and human survival. Mountains not only were biologically and socially essential but also were perceived of as animate embodiments of divine beings.¹² An *altepetl*’s *tlatoani*, including the Mexica *huei tlatoani*, was conceived of as the protector of his *altepetl*, charged with maintaining the balance between the human community and the forces of nature, such forces conceived of as deities. Thus the *tlatoani* was not only a political leader but also a head priest. Indeed, he was conceived of as a great tree sheltering his people. Such an idea was expressed by the Dominican Diego Durán, who recorded an oration that Nezahualcoyotl was believed to have delivered to Moteczuma I, the Mexica ruler (r. 1440–1469): “You well know, great prince, that all your subjects, nobles as well as the common people, are under your shade for you have been planted here like a great juniper tree [*sabina*] under which men wish to rest in order to take pleasure in the freshness of your friendship and love.”¹³ By *sabina* (*Juniperus* sect. *Sabina*), Durán probably meant the native *ahue-*

huetl, or cypress, which is an enormous, long-lived, water-loving tree that often grows near springs or other sources of fresh water.¹⁴ It is described in the Florentine in terms similar to Durán’s quoted oration: “It is large, high, thick, shady, shadowy. There is constant entering into its shade; under it one is shaded.”¹⁵ Metaphoric couplets in Book 6 where rulership is “*pochotl* [silk cotton], *ahuehuetl*,” make a similar point, as does that book’s comparison between forefathers and trees that provide shade and water.¹⁶

That the ruler should be thought of as a water-loving tree corresponds to his responsibility to supply the *altepetl* residents with fresh water, evidence of which is found in surviving remains of aqueducts and expansions of chinampa agriculture—all of them almost certainly public works projects—built around the basin to serve its peoples.¹⁷ But to talk of “human community” and “nature,” and to set these terms in opposition, is to rely on heuristic devices that reflect a Western idea of the cosmos: in all likelihood, the Nahua did not see the two as opposed entities, but rather as a more integrated whole. But the more salient point is this: when water supplies dried up during periods of drought, it was the Nahua ruler’s responsibility to rebalance the relationships with the forces of the divine, and to restore the normal supply of life-giving water. Such responsibility of rulers did not end when the Spanish assumed political control of the basin. In 1539, when the basin was gripped by a major drought, the peoples of Huexotzinco made desperate appeals at mountaintop Tlaloc shrines for the rains to return, appeals that were condoned, if not led, by basin elites.¹⁸ These appeals to the ancient god to end the drought came to light in Bishop Zumárraga’s investigations of idolatry among the Texcocan elite, an investigation that quickly led to accusations against the Texcocan lord don Carlos Ometochtli, among them of idolatry, and he was burned at the stake in Mexico’s main plaza in November of 1539. While it is usually the tragic figure of don Carlos that commands attention, as well as the interfamilial battles that caused him to fall, the case also underscores the traditional role of elites in maintaining relationships with the protective water deities who lived in surrounding mountains, as most recently argued by León García Garagarza.

Having established the ongoing role of Mexica elites in water management, both “practical” and “religious” (the distinction deriving from modern secular Western categories, not Nahua or Catholic ones), I turn to the Florentine Codex, and to the collaborator that Sahagún described

as “the leader, and wisest,” don Antonio Valeriano, to further emphasize that the role of environmental custodian continued during the sixteenth century. Valeriano was also a member of the high Mexica elite, involved in a number of water infrastructure projects. Born around 1522 in Azcapotzalco, Valeriano was a great-grandson of Axayacatl, as María Castañeda de la Paz has demonstrated.¹⁹ After the death of Mexico City’s indigenous governor, don Luis Cipac, in 1565, and an interregnum of almost a decade, Valeriano was seated as *juez-gobernador* (judge and governor) of the indigenous city in 1573, a position of both judicial and executive authority. When Valeriano was in his fifties and serving as governor, he would spearhead a project to bring more potable water from Chapultepec to the city, particularly to its thousands of indigenous residents, whose own access to fresh water had been curtailed by the city’s Spanish-led households.²⁰ This aqueduct-building project of 1575 to 1582 overlapped with the final drafting of the Florentine.

PANTITLAN

Valeriano’s manipulations of the environment were echoed in the work of his fellow Nahuatl who helped create the Florentine, a work that reveals them to have been highly sensitive observers of their unique lacustrine local environment as well as its flora and fauna.²¹ Despite the interest they expressed through texts, most of the illustrations that capture landscapes are fairly generic ones, hard to pin to unique places in the Basin of Mexico. A singular exception is the image of Pantitlan, a kind of whirlpool that existed in the eastern lake, about a mile off the dike that protected the eastern edge of Tenochtitlan and near Tepetzinco (see figure 8.1). The image breaks out of the neat formatting that guides most of the book: unlike other illustrations in the codex that are typically one column wide and about a quarter of a page high, this one occupies more than half the left-hand column of the page (fig. 8.3). In the upper two thirds of the image, the artist offers a bird’s-eye view of a portion of the lake, the horizontal wavy lines and swirls conveying water. A brownish ring dominates this upper part, the stipples across its surface identifying it as earth that rises like a berm above the water level. Set into the earthen ring are white flags. In this context, these flags also function as a place-name. *Pamitl* (which combines as *pan-*) means “banner,” *-ti-* is a ligature, and *-tlan* means “place of,” so that Pantitlan means “Place of the Banners.” Since the

Florentine Codex shows similar white flags in the hands of victims to be sacrificed, Pantitlan can also be interpreted to mean “Place of Sacrifice.” At the center of the earthen ring is a square construction with four sets of stairs on each flank ascending to a water-filled middle or cistern.

In the lower quarter of the image, the artist shifts perspective, and here we see three canoes as if viewed from the surface of the lake. Their three oarsmen all engage with the circular precinct. The one at left seems to have just thrown one of the green objects into the water in the center; the one at center holds up a box made of woven reeds; and the one at right holds a ceramic pitcher aloft, its form similar to the pitchers that are visible in the water, as if it, too, is destined to be an offering. At the top of the image, the lake fades into mudflats, and three waterbirds are visible, the one at the left foraging in the soft muck.

The colors are unusual: typically, in sixteenth-century maps from the basin, the artists opt for a standard palette of cochineal red, ochre yellow (for earth), and the brilliant turquoise we know as Maya blue (for water). In this image, the color register is shifted from red / yellow / turquoise blue to orange / green / blue violet; instead of Maya blue for the water, the artist uses a deep blue-violet pigment. It contrasts with the vivid green used for some of the offerings and on the large vessel in the canoe at right. The pigment used for both the men and their canoes is quite orange, more so than the flesh color used in other parts of the manuscript, and offers yet another dramatic contrast to the violet. In a manuscript where color was used sparingly, this blue violet, a transparent organic pigment almost certainly derived from indigo, has dramatic visual impact.²²

The larger size of the image of Pantitlan is also dramatic but not especially called for by the accompanying text, a long chapter describing the worship of the *tlaloque*, a complex of water and related mountain deities.²³ The last sentence of the Spanish text simply states that at the end of the main festival in their honor, all the adornments and vessels used for that feast were taken up and pitched into the *sumidero*, or drain, of Pantitlan. The Nahuatl text pays more attention to the kind of stuff that was disposed of: “And when day broke, thereupon took place the disposal of the remains . . . all their adornment—the paper garlands worn over one shoulder . . . their staves of round thick reeds, and their flame sticks, their cloud-bundles; and the jade cups and their little sauce bowls with which [the celebrants] ate, the little wooden bowls and the clay

bowls, all these they left at Tepetzinco, they threw them into the water, off shore, at a place called Pantitlan.”²⁴

But as we know from other studies of the images of the Florentine, the images are never merely illustrations to the text, and the large size of the Pantitlan image likely corresponds to its ritual importance, made clear in a number of other sections of the Florentine and in other sources. On the feast of Tlaloc, Atlcahualo, the Florentine Codex reports that child sacrifices were made at Tepetzinco and Pantitlan to the rain deity, Tlaloc, in return for abundant rains, stating, “There was the payment of the debt at Tepetzinco or there in the middle of the lake at a place called Pantitlan.”²⁵ These annual child sacrifices had a commemorative function: the *Leyenda de los soles*, a cosmogony written in Nahuatl, perhaps by one of the members of the circle of indigenous intellectuals who helped make the Florentine, recounts the ancient sacrifice at Pantitlan of a young Mexica girl, Quetzalxochitzin, in order to bring the end to a drought, and which resulted in the gift of maize from the rain deities.²⁶ Recall that the name Pantitlan can be understood as “Place of the Banners,” or “Place of Sacrifice.” And as Anthony Aveni has demonstrated, Pantitlan was one of a circuit of sites around the basin, threaded together in pre-Hispanic rituals of child sacrifice on Atlcahualo.²⁷ Aveni has shown that the rituals were carried out at seven sacred sites around the basin, three of them clustering together to form a node on the eastern lake: Pantitlan, the small hill of Tepetzinco (known today as Peñol de los Baños), and Poyauhtlan (at Tepetzinco’s foot).²⁸ Pantitlan was also the site of offerings during the feast of Etzalcualiztli, which was held a few months after Atlcahualo, during the rainy season, when captives in the likenesses of rain gods were sacrificed and their hearts offered at Pantitlan; “cloud vessels” (*mixcomitl*) containing the sacrificial hearts were tossed into the waters, as if to propitiate the water deities.²⁹ Thus, these sources show three kinds of rituals associated with Pantitlan: the interment of objects used in ritual, the commemorative child sacrifices to bring rain, and the offerings of sacrificial hearts to propitiate the rain deities.

The last two of the rituals taking place at Pantitlan centered on maintaining a steady supply of water, held during the anxious moments before the fall of the rain (Atlcahualo) and upon its arrival (Etzacualiztli), because Pantitlan itself was an environmental index to those changes, a bellwether to the larger conditions that obtained in the lake. The caching of the ritual objects seemed to occur at

the beginning of the cycle when the lake levels were low: while the Florentine image of Pantitlan shows canoes approaching the site, the far side shows mudflats at the edge of the lake, corresponding to the conditions one would find in the dry season. In contrast, the written description of Pantitlan during the festival of Etzalcualiztli, which occurred when lake levels were higher, describes a quite different scenario, telling us that when the cloud vessels holding sacrificial hearts were cast into the water, “the water foamed, kept surging, roared, crackled continually, crackled as it surged. Bits of foam were formed.”³⁰

But any site on the lake could have been chosen if the Mexica were just interested in the rise and fall of water levels. Instead, Pantitlan was understood to be a conduit to a vast system of underground waters that originated in the mountains—these waters could either flow out from Pantitlan or be sucked into it. Like the Florentine’s creators, the Dominican chronicler and Mexico City resident Diego Durán also shared a fascination with Pantitlan, and he called it a *sumidero*—that is, a great drain, which, if unplugged, would suck all the water out of the lake. At the same time, he also described it as a place where enormous waves could engulf a boat, even on a windless day.³¹ This phenomenon suggests the opposite of a drain, that is, a spring, a place where water could surge upward.

To resolve the dueling natures of Pantitlan as drain/spring, the archeologists Margarita Carballal Staedtler and María Flores Hernández attempted to locate Pantitlan as well as to identify the precise geology that could create such variable effects.³² While unable to pinpoint the spot, they were able to determine the general region and derive from core samples of the stratigraphy some explanations for the phenomena observed there.³³ Pantitlan sits on a highly seismically active site, at the juncture of plates, and some of the lake’s erratic movements might have been produced by frequent seismic microquakes at the site. There also seems to have been underground springs lying beneath the lake bed; during the dry season, pressure from the water in the lake on the tightly packed clay strata beneath might have led to liquefaction of these layers, causing the “drain” effect; seismic activity could do the same. During the rainy season, underground flows of water from the surrounding mountains into the strata below the lake bed might have caused water to explode upward from the lake floor, causing dramatic waves on windless days, as well as the foaming and surging that the Florentine describes.

In the Florentine’s image, the outer ring with its ban-

ners shows Pantitlan as protected by a man-made earthen barrier anchored with wooden pilings. This barrier appears similar to the way that the dikes were constructed, where archeologists have shown them to have had retaining walls created by driving tree trunks down into the lake bed for vertical support and then weaving them together with strong saplings to hold the inner fill.³⁴ Durán tells us that these were the remains of great tree trunks, again objects left over at the end of ceremonies, that were brought to the site at the close of a ritual and driven into the lake bed. He offered eyewitness testimony to these pilings when he reported seeing “great hoary trunks rising from the water” when he passed the site by boat.³⁵ He does not mention the inner construction, but in my reading, the Pantitlan image captures a dry moment, and the radial four-sided pyramid with a central cache at the center of Pantitlan would have likely been visible only when lake levels were low. When it *was* visible, the architecture served as a kind of alarm clock to signal that the time for ritual had arrived; and given the history of radial pyramids throughout Mesoamerica, it was an appropriate marker for period-ending rites.³⁶ Unfortunately, the slim opportunity of archeology in the current area (near Mexico City’s international airport) has made further exploration of these features nearly impossible, and thus this image may offer a singular piece of evidence about the perceived relationship between Mexica ritual and the watery environment, beyond the more abundant information on mountain ceremonies.

While the image comes in a section of the book concerned with rituals of the pre-Hispanic past, Pantitlan and its waters still posed a very real threat to the Florentine’s writers in the 1560s and 1570s. The reasons for the great flood of 1555 were many and various. Incessant Spanish campaigns to build the city using huge amounts of wood as pilings in the swampy lake bed and as roofing materials meant that the surrounding mountains had been denuded of trees; deprived of its natural anchors, the topsoil bled into the lake, and the naked hills became unable to absorb runoff. In addition, the Spanish leaders of the city neglected the elaborate system of dikes that the Mexica had constructed to maintain water levels in the basin, instead choosing to use native work gangs to build their houses and civic and religious buildings, such as the cathedral. Historical evidence suggests that the floodwaters of the 1555 inundation came from the east of the city, that is, from the area around Pantitlan, because in response to

the flood, Viceroy Velasco ordered the reconstruction of a dike to protect the east littoral, which would have been the flank of the city closest to Pantitlan.³⁷ We do not know the role that Valeriano played in the reconstruction of this dike, but we do know that Velasco called on Nahua elites from basin cities to offer advice on how to deal with the catastrophe, and if Valeriano was not among them, members of his family were.³⁸

Thus, both Valeriano and Sahagún were living in a moment of terrible aberrations in the normal patterns of the city’s lacustrine environment—a sixteenth-century version of climate change, with documented droughts in the late 1530s and terrible flooding in the mid-1550s. These were not the only natural catastrophes. When the Florentine’s authors hurriedly worked to finish the last books of the volume, they shut the monastery’s doors against the plague that raged outside, a plague that might have killed a quarter of the city’s indigenous population.

The image of Pantitlan shows that the Florentine’s creators possessed keen awareness of the surrounding environs, as do other parts of the work, particularly Book 11. But it also includes human figures interacting with their environment, and it is important to pay close attention to what they are doing. As the three men bring their boats close to the defined precinct, they throw ceramic vessels, jade objects, including one in the form of a human, and things contained by a woven reed box into the cistern. The great vertical banners may be more of this refuse that remained at the end of a ceremony. The Mexica and other Nahuatl-speaking peoples typically engaged in breakage and cleansing rituals at the end of chronological cycles; in the New Fire ceremony that occurred every fifty-two years, households broke household objects and threw them out. As Byron E. Hamann has noted, “The destruction of household contents reenacted on a homely scale the cosmic devastations that destroyed previous ages of creation.”³⁹ In the case of the festival to the rain deities depicted in the Florentine’s image of Pantitlan, the dumping of used-up ritual costumes and vessels and the vertical caching of tree trunks at the site of a radial pyramid was the small-scale equivalent of the wide-scale cleansing of households at New Fire, “in which a new age could be symbolically brought into being.”⁴⁰ The hillside adjacent to Pantitlan, Tepetzinco, served a similar function. The Codex Chimalpahin, a history of the Mexica written in Nahuatl at the beginning of the seventeenth century, tells us that upon the defeat of the evil sorcerer

Copil, “[Huitzilopochtli] cut off his head and cut open his breast. When he had cut open his breast he took his heart from him. And he placed his head on top of Tepezintli [or Tepetzinco], a place now named Acopilco, [for] there Copil’s head died.”⁴¹ Following this sacrifice, the city of Tenochtitlan was founded. Thus, Pantitlan and Tepezinco are marked as sites where disruptive “refuse” (like the head of the enemy Copil) was interred. In the Florentine’s image of Pantitlan, the foreground figures engage in actions that symbolically cleansed and renewed the world while simultaneously ensuring the orderly continuation of their universe.

THE ACUITLACHTLI

While Book 1 deals with the world of past ritual, Book 11 is set in the present. Not only does it discuss the sources of water in its chapter 12, but many of the texts and images also deal with plants and animals with aquatic habitats, and thus Book 11 has a great deal to say and show about water. More than half of the 204 images in the Florentine Codex that deal with water appear within Book 11, as the table in figure 8.2 shows. The water-associated animals included in Book 11 were certainly of interest because of their utilitarian value and were often divided into “edible” and “inedible” kinds. But more importantly, their normal behaviors were connected to the overall stability of the environment. This stability is thrown into relief by another aberrant or abnormal episode, in this case the behavior of an animal. Within chapter 2 of Book 11, a chapter devoted to waterbirds, on folios 33v–34v, we are treated to a much longer narrative about the *acuitlachtli*, a name that translates to “water bear.” Many names of waterbirds in this section begin with *a*, the root stem of the word *atl*, or water, but in this case *a* is combined with *cuitlachi*, or bear, to describe an animal that is not a bird at all, but instead likely a type of nutria. The name captures the anomalous nature of the animal, a hybrid between a ferocious land mammal and a water creature. According to the text, the animal’s normal behavior was to hide under the water, to remain invisible, and to cause the water to boil—a small-scale version of the behavior of Pantitlan.

The opening image to the section on this beast shows the *acuitlachtli* in his watery home of the lake, surrounded by fish and serpents (fig. 8.4). His profile pose, however, is noteworthy, as he sits on his haunches and holds out his clawed hands in front of his body, so they appear horizon-

tal, thus striking the same pose that Mictlantecuhltli, the deity of the underworld, adopts in the Codex Magliabechiano (fig. 8.5). On this page of a manuscript picturing the “idolatrous” rituals of the pre-Hispanic period, Mictlantecuhltli sits atop the stepped temple platform at the right. He is identifiable by his skeletal lower jaw and five small banners composing his fan-shaped headdress. His clawed hands stretch out in front, toward the six penitents at left. In this pose, the *acuitlachtli* of the Florentine is thus visually associated not with the regenerative watery underworld of Tlaloc, the rain deity, but with the realm of the dead.

While it is the normal behavior of most animals that the Florentine’s text describes, it is the abnormal behavior of the *acuitlachtli* that catches the authors’ attention. Both the Spanish and the Nahuatl texts mention the recent appearance of an *acuitlachtli* in waters from Santa Cruz Cuauhtcalco, “which is the spring that flows to Tlatelolco” (*in ompa catqui ameyalli, in huallaticac Sanctiago*).⁴² Other sources tell us that water from a spring (known as Xancopinca), which was situated near Cuauhtcalco, a site on the lakeshore, was carried by an aqueduct into the center of the urban nucleus of Tlatelolco.⁴³ The second image of the *acuitlachtli* appearing on relevant folios shows us this episode: the beast, seated with his forelegs on the ground like a dog, appears in a water fountain, defined by a low hexagonal base (fig. 8.6). By its shape and the description in the text, this is likely a freshwater fountain that the indigenous leaders of Tlatelolco had built in the 1550s to capture the Xancopinca waters and serve the urban populace. The construction of this elegant stone fountain was registered in the Codex Tlatelolco, a manuscript of uncertain date that records events of the 1550s and 1560s (fig. 8.7). In this indigenous codex, the fountain is shown with an octagonal base, filled with a blue pigment to signify fresh water; at its center rises the fountain’s spigot in the shape of a bird, with streams of water coming out of pipes emerging from its mouth and its chest. This fountain would have been well known to the Florentine’s creators, in that it was placed in Tlatelolco’s main plaza, just steps from the monastery where the Florentine was being created.

Freshwater sources, like the fountain of Tlatelolco at the center of the island city, had both practical and symbolic importance. A freshwater source was essential for the health and survival of an urban population, and supplying the residents with fresh water was one of the key responsibilities of Nahua rulers both before and after the

conquest, as discussed earlier, and connected to the native concept of *altepetl*.⁴⁴ Their interest was shared with that of the Franciscans who engineered water in and around their establishments, evoking the streams of Jerusalem.⁴⁵ The entry of such an animal into the city's freshwater source would have been quite threatening, as its dirty and disruptive habits would have fouled the precious liquid that sustained the urban community. The text does not tell us what caused the *acuitlachtli* to end up in the fountain, but contemporary science offers abundant evidence that animals often leave their normal habitats because of some environmental disruption, in the way that rising temperatures in Alaska and the northern Yukon are causing changes in the caribou migrations. Given what we know of the dramatic changes during the sixteenth century in the Basin of Mexico, which was whipsawed between drought

FIGURE 8.8. Death of the *acuitlachtli*. Florentine Codex, Bk. 11, fol. 34v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

and floods, the dramatic changes in lake levels is the most likely cause for the *acuitlachtli*'s aberrant behavior.

The fate of the aberrant *acuitlachtli* would be an unhappy one, but the role of human actors can be understood as an attempt to set the world back in balance. The third and final image of the animal that the Florentine offers shows us the *acuitlachtli* being hunted down by two men with spears, who stand with their feet in shallow water (fig. 8.8). Between them is the shaggy beast, who suffers a spear thrust to its proper right side, the mortal wound emitting a corona of blood. The wounded *acuitlachtli* thus resembles both the human sacrificial victims frequently depicted on the pages of the Florentine as well as the crucified Christ, with a lance piercing his right side. And the text also relates that when one was captured and brought to the ruler of Tlatelolco in the 1530s, "he was so terrified by it that he had it buried in Tepetzinco," that is, on the outcropping of land adjacent to Pantitlan. The burial of the *acuitlachtli*, an animal that strikes the pose of the underworld deity, at the same site as the head of the evil sorcerer Copil, who conspired against the Mexica, was hardly insignificant. The ruler's decision to bury the animal at this spot reasserts an initial ordering act that, at another moment in time, resulted in the foundation of the city in the aftermath of propitiatory sacrifice.

These two cases, then, present a landscape feature, Pantitlan, that was, by its nature, aberrant in its alternations between fountain and drain, and an animal that was also liminal, both furry mammal and aquatic creature (as was

another important transgressive animal, the feathered serpent), and on one notable occasion exhibited aberrant behavior. In both cases, the Florentine's creators make clear that human beings are not powerless, as the codex carefully registers responses as well as the initial phenomena. In the image of Pantitlan, the men in boats consign the refuse from the rain deity feast at the site, thereby paving the way for world renewal. In the image of the *acuitlach-tli*, the beast is sacrificed by a thrust of the spear to the chest, as were human victims whose own deaths were necessary to keep the natural (and therefore divine) order of the world in balance. These images ultimately show us the importance of human action in keeping the world in balance, a key principle of Nahua belief.

The form of the spatial representation of Pantitlan is worth underscoring. While we know little of what Pantitlan looked like, the Florentine's artists show it following a recognizable template: a square construction, almost certainly a radial pyramid, surrounded by a ring of water, then by a ring of earth and another ring of water. This is an amplification of the basic template of Aztlán, the mythical place of origin of many of the *altepetl* of the basin. Consider the *Tira de la peregrinación*, page 1 (fig. 8.9). Here, the oval form at left is an island within which a temple, a seated male-female couple, and six small houses appear. The couple faces to the right, as if to watch a solitary oarsman cross the surrounding lake. This oval island, ringed by lake, is the idyllic homeland of Aztlán. The template found its fullest realization in Tenochtitlan itself, which was an

island ringed by a lake, which was in turn surrounded by the land of central Mexico, which was then surrounded, or so it once seemed, by the vast seas that stretched out to the east and west forever. Thus Pantitlan, the most dangerous part of the lake, a threat to the order of the world, is here translated into an idealized model, itself a visual synecdoche for the larger achievement of the Mexica in taming the water that surrounded the city. In sum, in these responses to local environmental anomalies, the creators of the Florentine drew on a worldview within which environmental disorder could be set right by a human response, and they cared enough about it to devote pictures and pages of their magnum opus to underscore the point.

COLOR

What can color add to our understanding of this work? Diana Magaloni Kerpel has argued that the application of colored pigment in the images of the deities in Book 1 was meant to emphasize their status as *teixiptla*, or localized embodiments of deities.⁴⁶ So now, any consideration of water in the Florentine would seem to be incomplete without discussion of its color.⁴⁷ The colors used for water in the Florentine Codex can be basically broken down to four, used in various concentrations—gray, tan, violet, and Maya blue. When one looks at patterns of color used across the manuscript, one pattern is striking—and that is the availability of color. Beginning around folio 179 in Book 11, color disappears almost entirely, likely because the trade networks that supplied urban markets were shut down by the plague that began in 1576. In addition, if we understand that the manuscript, from beginning to end, represents various temporal sequences (Jesús Bustamante García has shown that the trajectory from Book 1 to Book 12 was not an uninterrupted sequence),⁴⁸ we can see that in some of the sequences, like the time when artists were at work on Book 11 between folios 48 and 66, Maya blue was abundant. But interestingly, it is not Maya blue that is the favored color for water of the surrounding lakes, but rather a rich violet purple, found as both a concentrated pigment as well as a pale, almost gray wash.

In the case of colors used for water, the Florentine itself is aberrant. In cartographic manuscripts from the same time and place, artists uniformly use turquoise pigment, most likely derived from Maya blue, to show flowing water. As for the Florentine, it is not just that artists would have opted for Maya blue if they had been able to

FIGURE 8.9. *Departure from Aztlán. Tira de la peregrinación*, 1 (mid-sixteenth century). Biblioteca Nacional de Antropología e Historia. Reproduced with permission from the Instituto Nacional de Antropología e Historia, Mexico City.

FIGURE 8.10. Violet (top) and Maya blue (bottom) pigments were available and used on the same page. Florentine Codex, Bk. 11, fol. 26v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

acquire the pigment. In Book 11, chapter 2, folio 26v, the artist working on the page had access to both, but used violet for the water in the figure above and turquoise for the bird below (fig. 8.10). So why the anomalous use of this violet pigment for so much of the water in the Florentine Codex?

Turning to the way water appears in Book 2 offers an interpretive path. This part of the manuscript deals with pre-Hispanic rites, and water is frequently shown in rituals of the washing of infants. Ritual washing, also done during rites of royal consecration, was a way that the Nahuatl moved from one life state to another. In the case of infants, they moved from the ungendered and unordered neonatal state into a world of gender roles and fixed responsibilities, which were described to them in the orations of the elders. But for those gathered in Tlatelolco, these past ritual washings in water had their present-day correlation in baptism, the first Christian sacrament that brought to their souls the possibility of salvation. In a featherwork now in the Museo Nacional del Virreinato showing Christ as *Salvator Mundi*, which was perhaps produced in Mexico City, his resplendent cloak is made of purple-hued feathers, the work linking the extraordinary color to Christian salvation.

The water used to effect such passages in the Florentine is almost always violet or violet tinged. And the waters of Pantitlan are also violet tinged. Since this pigment almost never, that I can think of, appears on quotidian maps

showing water, the use might be a convention particular to the Florentine. In the books dealing with pre-Hispanic rites, the painters show us water marked by a different level of animation and sacrality than ordinary water, like the waters that ushered the neonate into the local human community. When the Florentine was created, this community was a Christian one, and some of their present-day water, captured in Book 11, shared this color and perhaps its meaning as well.

CONCLUSION

The conquest unleashed terrible environmental changes in the Basin of Mexico, and sixteenth-century residents of the region were well aware that they lived in an era of ecological (particularly hydraulic) turmoil, a time of climate change not unlike our own. In writing about and picturing the surrounding lakes, the minds and imaginations of the intellectuals who worked on the Florentine Codex were snagged on the aberrant behavior of water and of animals. At least one of the scholars, don Antonio Valeriano, was also a ruler and thus, like the long line of rulers that preceded him, bore some responsibility for water management for the community he led. This chapter has barely mentioned the long Franciscan theological tradition dealing with the natural world,⁴⁹ but certainly Valeriano's sense of responsibility was deepened by the education he received at the Colegio de Santa Cruz, as was his conviction that propitiatory sacrifice can save the world. By shifting from a Nahuatl/European binary to *emplacement* as the site of analysis, and in focusing on certain environmental phenomena, I have hoped to show that the creators' innovative responses were not those of "pre-Hispanic" minds, but to suggest that all the Florentine Codex creators were grappling with inherited beliefs and Christian notions as they faced the ever new challenges that their surrounding environment posed. If one accepts that it is these intellectuals' responses that are registered in text and image, one can see how the Florentine underscores the human role in righting ecological disorder, whether it was the carefully tendered offerings at Pantitlan that were carried out before the conquest, or the sacrifice and interment of the *acuitlatchli* at the nearby site of Tepetzinco that was done in the 1530s. At the same time, the Florentine's creators sought ways to make these roles compatible within a Christian framework of baptism and salvation. Despite the tragic cast of their age, these intellectuals still had ac-

cess to a world where human action could set the cosmos right: in the violet waters that ushered the neonate into the human community came both a promise and a responsibility.

Bundling Natural History

Tlaquimilolli, *Folk Biology*, and Book 11

MOLLY H. BASSETT

Book 11, “Earthly Things,” is the lengthiest and most illustrated volume of the Florentine Codex, and given the Church’s directive to fray Bernardino de Sahagún—to create an aid in the extirpation of idolatry—its subject, natural history, may seem at odds with the overall project. Attending to the details of “the little insects called fireflies,” “the mushrooms,” or “the nature of the soils” looks, at least at first glance, irrelevant to the identification and eradication of indigenous religion. However, Aztecs—like many indigenous peoples—did not distinguish nature from culture in the way that moderns did (and do).¹ Neither did they associate nature with God as sixteenth-century Catholics did. In his prologue to Book 11, Sahagún remarked pointedly on natives’ confusion about the origin of the natural world, its features and creatures: “This work will also be timely to inform the natives of the meaning of created things, that they not attribute divinity to them.”² As is clear from the resources he devoted to Book 11, Sahagún valued it as a resource for understanding Nahuatl and for the insight it provided into how Aztecs perceived their environment.

In the following, I argue that Book 11 is crucial to understanding Aztec religion because it showcases some aspects of the folk-biological knowledge essential to the religion’s ritual activities. In their introduction to *Folk-biology*, Douglas L. Medin and Scott Atran take the position that “people’s actions on the natural world are surely conditioned in part by their ways of knowing and modeling it.”³ Folk biology “reflects rich direct and indirect experience with biological kinds in the indigenous culture,” and

folk-biological knowledge depends upon intimate contact and social interactions with the local environment and its populations.⁴ These are culturally constructed relationships; folk biology is a relational observation of “nature.”

Book 11 is essential for understanding Aztec religion in that it reveals connections Aztecs saw between nature and gods and provides specific information about many of the plants, animals, and stones they engaged with in rituals. For example, priests drew on folk biology to wrap *tlaquimilolli* (sacred bundles) that included stones, osseous materials, animal pelts, and other naturally occurring and human-made objects. The bundles’ physical construction and material composition were fundamental to their (re)presentation of a *teotl* (god). The surface appearance of objects in bundles signaled a host of associations each carried so that a bundle wrapped in a jaguar pelt incorporated characteristics of the feline. In fact, the multicolored coat of a jaguar pelt and the characteristic blue green of turquoise contributed essential aspects of the animal and the stone to the material composition of the god-body so that nature was bound up in the (re)creation of the divine. The structures of bundles, temples, and mountains suggest that Aztecs highly valued physical rituals, such as layering, wrapping, and clothing, in the production of animate entities and that they saw similar structures as equivalent. Sacred bundles recreated god-bodies, and given their materiality, they also (re)collected folk-biological knowledge. Thus, they represent a mode of engaging the world that incorporates nature and god.

FIGURE 9.1. Lovely cotinga (*Cotinga amabilis*). Courtesy of William Orellana, *Beaks and Peaks*.

COLORING THE SURFACE OF THINGS

My curiosity about surfaces and appearances increased as I noticed mentions of *teotl* in Book 11's descriptions of objects belonging to the natural world, like turquoise. Among the many kinds of jadeite Aztecs knew, they identified three distinct types of *xihuitl*, "turquoise." In addition to *xihuitl* (ordinary "turquoise"), two others—*teoxihuitl* and *tlapalteoxihuitl*—stand out because they contain the prefix *teo-* from *teotl*.⁵ The Nahuatl text explains their etymology: *teoxihuitl* "is the property, the lot, of the god; and it means that it is much esteemed, because it does not appear anywhere very often. . . . And when it appears some distance away, it is quite pale, like the lovely cotinga, verily as if smoking" (fig. 9.1).⁶ As Guilhem Olivier argues in chapter 7 of this volume, Sahagún's efforts to understand Aztec religion and prepare a guide for its extirpation involved attempts to clarify religious language while also limiting religion's significance. By contrast to the descriptions of *teoatl* (ocean) or *teocuitlatl* (gold), in which Sahagún downplays associations with the gods, *teoxihuitl* seems to have escaped his editorial eye. In fact, the de-

scriptions of *teoxihuitl* and *tlapalteoxihuitl* not only make turquoise's connection with *teotl* clear but also expand the terms' significance by drawing a comparison to the lovely cotinga, a small bird prized for its blue-green feathers.

The *xiuhtototl*, the lovely cotinga (*Cotinga amabilis*), is a beautiful blue bird, "a dweller in Anahuac. . . . Its breast is purple, its back a really light blue, a very light blue, its wings pale, and its tail mixed, part blue-green, part black."⁷ Two images of the lovely cotinga's entire body appear alongside bunches of blue, green, and red feathers in Codex Mendoza tribute lists for the province of Xoconochco.⁸ Located on the Pacific coast in present-day Chiapas, Xoconochco was home to the bird.⁹ Feathers collected there made their way to Tenochtitlan, where feather workers wove them into precious goods, such as the deity clothing listed as belonging to Huitzilopochtli and Teteoinnan in the *Primeros memoriales*.¹⁰ According to the description of Huitzilopochtli in the *Primeros memoriales*, several other blue-green elements adorned the god, including the *xiuh-tlapalli* (knotted turquoise cloth), blue stripes on his legs, and his *xiuhcoatl* (turquoise serpent staff).¹¹

Turquoise and the lovely cotinga share a single significant attribute: their blue-green color. Color mattered in every sphere of Aztec culture, and the value Aztecs attributed to blue green cannot be overstated. In his study of mining and turquoise in Mesoamerica, Phil Weigand writes, "Turquoise became an extravagantly valuable possession and status marker, laden with so much symbolism that it is difficult for us to comprehend. Turquoise appears at almost every explanatory and symbolic juncture within the Mesoamerican ideological system."¹² Indeed, as Elizabeth Benson notes in *Birds and Beasts of Ancient Latin America*, "The colors of feathers may often have been more significant than the birds they came from."¹³ The symbolism that inheres in everything blue green illustrates the significance of color and surface in Aztec culture.¹⁴ Drawing on scientific analyses of pigments in the Florentine Codex, Diana Magaloni Kerpel suggests in this volume and elsewhere that color vivified images.¹⁵

Given the value and prominence of green stones in Aztec luxury goods and Nahuatl rhetoric, turquoise may appear to have an "essence" that connoted and denoted specific associations.¹⁶ Indeed, the ideas of essences, energies, and forces of the gods have a long history in the study of Aztec religion. Other scholars have argued that Aztec deity images functioned as containers that housed the energy, force, or essence of the god.¹⁷ The interplay be-

tween interiority and exteriority in Aztec understandings of objects in the natural world deserves more attention than I can give it here. For the purposes of this chapter, I contend that Aztecs were acutely aware of and concerned with surfaces, appearances, and color, and their use of equivalences illustrates the importance of the physical forms and materials they employed in ritual activity.

EQUIVALENCES

In the case of the Aztecs, language, image, and matter converged in ritual activities that recognized and produced animate entities and sacred structures in the natural environment and human-made world. Put differently, Aztecs “admitted no ontological distinction between human and nonhuman creation (i.e., ritual/“nature”). . . . Nature was ritualized just as ritual was naturalized.”¹⁸ Instead, Aztecs identified specific equivalences and like characteristics in significant objects, entities, and structures. Elsewhere, I argue that the etymology of *teixiptla*, literally “something characterized by a flayed surface,” as well as its function in ritual apotheosis, depended on materiality, physicality, and appearance. Aztec mythology and ritual abound in examples of men, women, and things that became gods by taking on the physical appearance and comport of a particular *teotl*. What looked like mounds of amaranth dough were the *tepictoton*, the little mountain gods.¹⁹ What seemed to be a bundle of cloths and blankets was Tezcatlipoca. The *teixiptla* (god-body) is the most striking equivalence in the Aztec cosmovision, but other examples—and some of them quite curious—abound.²⁰

For instance, “the heart-shaped fruit from the [nopal] cactus also served in sacrifice, not because it stood for, or replaced, the human heart but because it was equivalent, one more manifestation of nourishing food.”²¹ As this example illustrates, Aztec understandings of their local environment operated according to assumptions about animacy and modes of engagement that did not (and, for Nahuas, do not) align with Western conceptions of flora, fauna, and landscape. Importantly, in the equivalence Aztecs made between hearts and *tunas* (nopal fruits), the juicy red *tuna* became the bloody heart just as a *teixiptla* became the god. Processes of ritual manufacture made some things acquire other ways of being, and these ontological transformations facilitated ceremonial activities, including the heart sacrifice of living (formerly human) deity embodiments. The *tuna* was both fruit and

flesh, ordinary and extraordinary. A physical and ritual paradigm emerges through the examination of equivalences, and an established equivalence—that of temples and mountains—may be extended to include bundles.

WHY THE BUNDLE IS BETTER

The *quimilli* (bundle), and the related *tlaquimilolli* (sacred bundle), are two of several ways in which Aztecs quantified and, in the case of *tlaquimilolli*, qualified things. Speakers of older Nahuatl routinely used what linguists call classifiers or quantifiers. *Quimilli*, “bundle of cloths or blankets,” is the nominalized form of *quimiloa*, “to wrap someone or something in a blanket, to enshroud.”²² Danièle Dehouve identifies *quimilli* as a kind of classifier that quantified groups of twenty beings or things and referred specifically to a wrapped package of twenty capes, cloths, or blankets.²³ Dehouve underscores the significance of the bundle’s physical form, its shape: “It must be understood that capes were tied in bundles and not, as in the case of *ipilli* [another class of quantifier], placed one over the other in layers.”²⁴

The Florentine Codex and other texts from postcontact central Mexico, including the Codex Mendoza, attest to the use of *quimilli* and the Spanish equivalent *carga* in reference to bundles of (twenty) capes or *mantas* (cloths) (fig. 9.2). During the festival of Panquetzaliztli, for example, merchants purchased sacrificial victims in the marketplace. An explanation of the costs associated with purchasing the would-be victims illustrates *quimilli* as a quantifier: “In amo cenca mihmati ic mitotia in ipatiuh cenquimilli ommatlactli. Auh in cualli ic mihtotia in chipahuac inacayo in ipatiuh onquimilli in cuachtli” (If he were not highly skilled as a dancer, his price was thirty

FIGURE 9.2. Mantas (cloths) in bundles. From the Codex Mendoza, fol. 31r. Drawing by the author.

large capes. But if he danced well, if he were clean of body, his price was forty large capes).²⁵ These examples demonstrate how Nahuatl speakers increased the quantity of bundles of capes from twenty to thirty and forty. The unskilled dancer cost *cenquimilli ommactlactli*, one bundle (of twenty) and ten ($20 + [2 \times 5] = 30$), whereas the skilled dancer cost *onquimilli*, two bundles ($2 \times 20 = 40$). This example illustrates how Aztecs used *quimilli* in their marketplace exchanges, and it draws attention to the significance of twenty.

To the Aztecs, bundles represented complete and whole things, and part of *quimilli*'s ability to represent wholeness derives from its association with the number twenty. Like other Mesoamericans, the Aztecs conceived of *cempohualli*, "twenty; one full count," the foundation of their vigesimal numerical system, in relation to entirety and totality.²⁶ *Cempohualli* is a compound word. *Cem*, "one," attaches to the necessarily bound *-pohualli*, "a unit of twenty in the vigesimal counting system," which comes from the verb *pohua*, "to count something, to read something, to recount, relate, or give account of something, to assign something."²⁷ The way in which Nahuatl names numbers reflects their close relationship to the human body:

The basic numbers are given from one to four (*ce*, *ome*, *ei*, *nahui*); number five signifies "what the hand takes" (*macuilli*), numbers six, seven, eight, and nine mean "the incomplete plus one," "plus two," "plus three," and "plus four" (*chicuace*, *chicome*, *chicuei*, *chicnahui*). Ten returns etymologically to hands, as extremities of the upper part of the body (*matlactli*), to distinguish the first two series of five numbers from the following two, which all together made "a count": twenty.²⁸

The definition of *cempohualli*/twenty arises from human activity: counting, reading, and relating. That *quimilli* contained twenty cloths or capes brings to the bundle the sense of completeness resulting from the human activities that *cempohualli* connotes.

The significance of *quimilli* in Aztec culture can be extended far beyond its ability to count and quantify. As examples from the Florentine Codex illustrate, the process of wrapping bound things together and into a whole was like wrapping a broken bone that facilitates healing:

[I]ntla aca mocxipoztequi: yehuatl ic pati, in acocotli, inelhuayo, monamicia, in inelhuayo nopalli moteci, onca

FIGURE 9.3. Setting a broken bone. Florentine Codex, Bk. 10, fol. 238. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

onmotema, in oncan omocxipuztec: auh in onmotecac, zatepan lienzotica moquimiloa. . . auh cempohualihuitica in motomoa. . . auh in omototoni, zatepan motema: iquac in ye chichahuac, in ye quihuelmati, iicxi.

If someone breaks a leg, it is cured in this way. Acocotli root is added to nopal root, [and] they are ground. They are placed there where the leg is broken. And when they are placed on, then [the leg] is wrapped with a cloth bandage. . . And after twenty days it is untied. . . And when the poultice has been applied, then when his leg [is] strong, when it becomes whole, a hot bath is taken.²⁹

Quimilli and *quimiloa* occur in contexts where curing and healing take place through wrapping (fig. 9.3).³⁰ A "bundle" was more than just a bunch of cloth; it was a physical means of (re)creating wholeness.

The sense of completeness bound up in *quimilli*'s numerical significance, and in wrapping's ability to actively (re)construct the body, contributed to its role in marking temporal and political transitions. The importance of wrapping in ceremonies of establishment and renewal can be seen throughout Amerindian cultures, including those of Mesoamericans.³¹ Studies of both *k'altun* (stone binding), a feature of some Maya monumental architecture, and political rhetoric, concerning the roles of bundles and burdens during the transfer of power from one ruler to the next, highlight bundles' connections to bodies, time, and space.

As David Stuart explains, binding, sometimes accompanied by bloodletting, marked critical times of transition, including the end of cosmic eras. Based on stelae in Copán's Tomb 1, Stuart argues, "From what we know of the importance of cloth wrappings and bundles in Mesoamerican ritual, it is reasonable to suppose that the purpose of the *k'altun* ritual was to protect and contain the divine essence held within the stones that embodied time and its movement."³² The Maya also constructed cloth bundles to transfer power during times of transition, and *ch'ulel*, the divine essence present in stelae like those bearing "stone bindings," imbued rulers. Brian Stross explains that in Maya rulers' inauguration ceremonies, the outgoing ruler passed a knotted bundle, the *i-ka-tz(i)*, or "burden," of office, to his successor.³³

Similarly, Aztecs spoke of the responsibilities of rulership as a *tlamamalli*, a "burden," and of the transfer of power from one ruler to another as being borne in *quimilli* or on *cacaxtli*, "carrying frames." In the many prayers offered after a ruler's installation, the language of bundles and burdens appears frequently: "O master, O ruler . . . Now, in truth, thy progenitors, thy great-grandfathers, have departed, have gone on to reside. . . . For they departed placing, they departed leaving the bundle [*quimilli*], the carrying frame [*cacaxtli*], the governed [*in tlaconi in tlamamaloni*]—heavy, intolerable, insupportable."³⁴ It may be impossible to know the contents of the bundles like those depicted on Yaxchilan Lintels 1 and 2. However, the idea that Maya bundles and their counterparts in Aztec rhetoric contained symbols that transferred the "burden" of office indicates that they were more than inert containers or passive quantifiers.

In addition to ordinary *quimilli*, Aztecs recognized a special category of bundle: the *tlaquimilolli* (sacred bundle). From cloth exteriors to ash, bone, and *chalchihuitl* (greenstone) "heart" interiors, the composite materials of *tlaquimilolli* both constituted the god-body and made it recognizable. Sacred bundles bound together deity relics, but they were more than a simple collection of things. *Tlaquimilolli* were deity manifestations, and according to Andrés de Olmos, sacred bundles were "the main idols held in great reverence, and they did not hold in as much reverence those creatures that adorned buildings or the figures they made from sticks or stones."³⁵ Elsewhere, Olivier states matter-of-factly that "first and foremost, the *tlaquimilolli* served to establish a direct communication with the god head . . . the sacred bundle of Tezcatlipoca, which con-

sisted of a wrapped mirror, guided the forefathers of the Tetzcocans, 'talking to them in a human voice [*hablando con ellos este espejo en voz humana*].'"³⁶ Given Tezcatlipoca's prominence, biography, and iconography, his *tlaquimilolli* provides an excellent example of how these extraordinary bundles (re)presented gods.

Regardless of the fact that *tlaquimilolli* were neither anthropomorphic nor zoomorphic, devotees identified the gods they embodied by virtue of a bundle's (re)collection of a given god's constitutive qualities.³⁷ According to Pomar's *Relación de Texcoco* in the *Relaciones geográficas*, Tezcatlipoca's *tlaquimilolli* contained "a polished mirror, the size and measure of half of a large orange, set in a crude black stone. With it were many loose fine stones, including greenstones, emeralds, turquoises, and many other kinds. And the cloth that was closest to the mirror and stones, it was painted with a human skeleton."³⁸ Bartolomé de Las Casas, a second source, reports that Tezcatlipoca "left his devotees 'el hueso de su muslo' [the bone of his thigh] and a mirror."³⁹ These reports indicate that people believed Tezcatlipoca's bundle contained a mirror and osseous symbols or remains.

The idea that Tezcatlipoca's *tlaquimilolli* contained a mirror comes as no surprise given the god's many connections to smoking mirrors, in particular, and to obsidian generally.⁴⁰ Tezcatlipoca's name means Mirror Smoking, his lower leg/foot is a smoking mirror, and his *tlaquimilolli* contained a smoking mirror bound with a leg bone. Tezcatlipoca both is (Lord of) the Smoking Mirror and is identified by the visual or material smoking mirror. As I argue elsewhere, this makes it difficult (for us) to distinguish the eponym from its embodiment.⁴¹ It also calls attention to the closeness Nahuas experienced in language, representation, and materiality: the thing, its name, and their depiction lacked significant distinction (or, conversely, they overlapped significantly). The bundle was the god, the (re)assembled god-body, and an image of the god, none apart from the other.

Visual evidence of the close connection between *tlaquimilolli* and the burdensome bundle of rule transferred during accession ceremonies appears in two illustrations from Book 8, "Kings and Lords" (figs. 9.4 and 9.5). Both the Nahuatl and Spanish texts surrounding these images indicate that the ruler-elect and his entourage made offerings of incense and blood to Huitzilopochtli in the Templo Mayor of Tenochtitlan. While the Spanish text stresses that the offerings were made to "la estatua [de Huitzilo-

FIGURE 9.4. Huitzilopochtli's *tlaquimilolli*. Florentine Codex, Bk. 8, fol. 46r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

pochtli],” neither the Nahuatl text nor the accompanying images indicate that Huitzilopochtli appeared in iconic form.⁴² Each image depicts a *tlaquimilolli*, sacred bundle, in the temple, and the Nahuatl refers simply to Huitzilopochtli: “Auh in yehuantin, papahuaque teopixque: caantih in tlatoani in quitlecauja ixpan Huitzilopochtli” (And these long-haired ones, keepers of the gods, went to the ruler, making him go up before [the image of] Huitzilopochtli).⁴³ By contrast, the Spanish text repeatedly refers to the god’s figurative form. This suggests that the three texts’ authors/artists registered Huitzilopochtli’s appearance differently. By contrast to a statue of Huitzilopochtli, the god’s *tlaquimilolli* would have appeared unremarkable in form, if recognizable (to outsiders) at all.

In his examination of Aztec *tlaquimilolli*, Olivier notes that “their study is difficult, partly because of the secret character of the rituals devoted to them.”⁴⁴ In addition to their rituals being secret, bundles were esoteric objects. The process of their physical manufacture—wrapping—

both created and occluded the sources of their powers, the relics around which the cloths and skins wound. Mountains and temples share structural and functional similarities with sacred bundles insofar as both house sacred elements, objects, and entities.

A MOUNTAIN WAS A TEMPLE WAS A BUNDLE

Decades ago Eduardo Matos Moctezuma pointed out that the right side of the Templo Mayor of Tenochtitlan recreates Coatepec.⁴⁵ The Templo Mayor’s symbolism—its serpent statues and archaeologists’ recovery of multiple Coyolxauhqui stones—indicates that the Aztecs recreated the site of their patron god’s birth in the heart of their capital’s ceremonial center. In the myth of Huitzilopochtli’s birth, Coatlicue became pregnant while sweeping the temple/Coatepec, and the Templo Mayor/Coatepec set a ritual stage for the state’s reenactment of Huitzilopochtli’s triumph over formerly powerful polities. The idea that a temple could be a mountain and that a mountain could be a temple is well established. I am proposing that mountains and temples were also bundles insofar as they shared functional and structural similarities.

FIGURE 9.5. Huitzilopochtli's tlaquimilolli. Florentine Codex, Bk. 8, fol. 46v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Tlaquimilolli, temples, and mountains were god-bodies (or, in the case of *teocalli*, “temples,” god-houses) by virtue of the fact that they contained *teotl*-stuff, god-stuff. As we have already seen, *tlaquimilolli* embodied gods by re-collecting a deity’s bioarchaeological remains (Tezcatlipoca’s femur), possessions (his mirror), and clothes (animal hide and cloth wrappings). Temples protected *tlaquimilolli* and housed other forms of deity embodiments. An incredible number and variety of god-bodies resided

FIGURE 9.6. *Chicomexochitl* (Seven Flower). Clothed paper effigies constructed during an annual ritual of the same name. Nabua community near Chicontepec, Veracruz, August 2010. Photograph by the author.

in the many *teocalli* (temples) of the Aztec empire. As figures 9.4 and 9.5 demonstrate, both *tlaquimilolli* and *teocalli* contained gods; *tlaquimilolli* embodied gods, and *teocalli* protected a variety of god-bodies. What, then, about mountains?

Altepetl, literally “water mountain,” means “town” or “pueblo,” and each Nahua town has its own *tepetl*, mountain. People identify with their *altepetl*, and they identify it with local deities. In the community where I have worked in Veracruz, the *altepetl* is home to the *Chicomexochitl* (Seven Flower), the “holy” family seen in figure 9.6. The community treats these paper god-bodies as living beings. Indeed, at great expense they orchestrate an elaborate ritual sequence that shapes each figure, dresses it, and endows it with vitality.⁴⁶ At the close of the ritual, these gods reside in a family’s home for a year, but they also live in/on the community mountain. Like the gods, the mountain is a living, breathing being. As one of the women with whom

I spoke in the Huasteca told me, “Yes [the mountain] is alive.” You can tell it is alive, she explained to me, because it needs food, and it talks: “Quemman tlatomoniz ne piltepetzin no como tlanquilia. No tlatomoni quehuac. Ne quennopa ne piltepetzin” (When it thunders, it is as if the hill also answers. It also responds. That’s the way the hill is).⁴⁷ In Mesoamerica, mountains are alive, and they relate to and participate in a community’s social life: they feel hunger; they talk; they house spirits; they embody deities; and they shape identities.

Aztecs and their contemporaries perceived mountains’ animacy too. Mountains and volcanoes were active features of the imperial landscape. Aztecs delivered water from the springs of Chapultepec hill, they watched water vapor rise from the smoking mountains that surrounded them, and they compared fog rising from caves to mountains’ respiration. Myths recorded in the sixteenth century explain that mountains contained water or corn, the sustaining elements of life. Matos Moctezuma emphasizes the importance of recognizing that “Tlaloc’s side [of the Templo Mayor] is the mountain of sustenance, or Tona-

catepetl, also mentioned in myth—in particular the one in which Quetzalcoatl must enter the mountain to steal the corn stored there to be given to men.”⁴⁸ Mountains are temples are bundles insofar as each holds vital sustenance: water, corn, life, and gods.

Mountains are temples are bundles because they share a common structure too. An image of Xiuhtecuhtli, Turquoise or Year Lord, from the Codex Fejérváry-Mayer demonstrates this point (fig. 9.7). Scholars frequently read this image as a bird’s-eye view of Xiuhtecuhtli atop a temple. He appears in the center of an image of the Aztec cosmivision with the calendar, cardinal directions, and other deities surrounding him. A three-dimensional reconstruction of the frontispiece shows Xiuhtecuhtli standing on the summit of a mountain/temple (fig. 9.8). In the subsequent image, the sides of the mountain/temple enclose the god as if he rests inside a bundle (fig. 9.9). This mountain is a temple is a bundle, and from either vantage point—on the mountain/temple or within the bundle—Xiuhtecuhtli is (in) the center of the cosmivision. From either location he can see the entire cosmivision and is central to it.

FIGURE 9.8. Copy of Aztec cosmogram from the Codex Fejérváry-Mayer folded like a temple. Photograph by the author.

FIGURE 9.9. Copy of Aztec cosmogram from the Codex Fejérváry-Mayer folded in a bundle. Photograph by the author.

The Templo Mayor's layered structure reveals it as another temple/mountain that is a bundle. Layers of new temples wrap, bind, and enclose the earlier structures. In between the masonry layers, priests and rulers buried offerings, caches, and stone replicas of standard bearers within the rubble fill. Indeed, some of those caches might have functioned as *tlaquimilolli*, containing deities and/or deity relics.⁴⁹ Prior to contact, the Templo Mayor housed *tlaquimilolli* and other deity embodiments in its active shrines while caches and other artifacts lay buried below. Given its bundle-like layers and multiple mountain significations, the Templo Mayor was the ultimate mountain-temple-bundle in the Aztec world. That a mountain was a temple was a bundle demonstrates that elements of natural, supernatural, and built environments were not confined to bounded or discrete lives in those worlds. The animacy of mountains, temples, and bundles depended on relationships established by the people who created and maintained them. These same people recognized the mountains, temples, and bundles as life-giving and sustaining, and they represented this recognition by layering meaning upon meaning in the construction of ceremonial structures and god-bodies, including *tlaquimilolli*. In the following, I explore how folk-biological knowledge related to one key animal, the *ocelotl* (jaguar; ocelot), illustrating the importance of appearance and surface in Aztec cosmology and in the manufacture of god-bodies.

SPOTTING THE JAGUAR

Even though European manuscripts influenced the organization of Book 11, the *ocelotl* held an indisputable place of importance in Aztec culture, as it had throughout Mesoamerica. Often identified as *Panthera onca*, or jaguar, the older Nahuatl word *ocelotl* referred to more than one creature. *Ocelotl* referred to the jaguar (*Panthera onca*) and the animal known as the ocelot (*Leopardus pardalis*), a smaller and similarly marked cat.⁵⁰

Ocelotl is the first subject of Book 11, which includes four Nahuatl entries for these felids (fig. 9.10). The primary entry emphasizes the animal's appearance and attributes:

It is long: long bodied, straight, round like a pillar;
squat, not tall, thick, corpulent; hard-fleshed, very hard-
fleshed; long-tailed; of gopher-like paws, very thick;

FIGURE 9.10. Ocelotl (jaguar or ocelot). Florentine Codex, Bk. 11, fol. 1v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

wide-padded—of very wide pads; thick, fat of neck; of pot-like head, very pot-headed, great-headed; of droplet-shaped ears; of thick, stubby, spongy, soft muzzle with a fatty, oily nose; of wide face with eyes like live coals; toothy, with small, pointed front teeth, with molars like pestles; wide-mouthed, open-mouthed; clawed, with sharp, curved claws, with dewclaws.⁵¹

Following the listing of its physical features, the text turns toward the *ocelotl*'s coloring, the animal's identifying characteristic:

It is varicolored [*cuicuilitic*], quite varicolored [*cuicuipatic*], spotted with black, blotched with black; white chested, smooth, sleek. Like ocelots [*ocelotic*], it becomes varicolored [*cuicuilihui*]; it is variously colored [*mocuicuiloa*], variously marked [*cuicuilitic*]; it becomes varicolored [*cuicuilitia*], it is variously colored, like an ocelot [*mocelocuicuiloa*]. Claws emerge. They grasp, they clutch. Teeth, molars, canines, emerge. It bares its teeth, gnaws, bites, tears. It growls, snarls, howls, roars like the blowing of trumpets.⁵²

The second sentence emphasizes the significance of the *ocelotl*'s coloring. *Cuicuilitic*, defined by Karttunen as "something painted," also carries the connotation of being multicolored.⁵³ As Marc Thouvenot observes, *cuicuilitic*,

the adjectival form of *icuiloa* (paint; write; imprint), reflects "a very broad and varied universe that encompasses not only human works and artifacts, but also nature in general."⁵⁴ Hear its repetition in the Florentine Codex: "ocelotic, *cuicuilihui*, *mocuicuiloa*, *cuicuilitic*, *cuicuilitia*, *mocelocuicuiloa*." This sentence begins and ends with *ocelotl*, but in between, the indigenous writer named the cat's multicolored coat five times. Repetition like this typifies the Nahuatl text in the Florentine Codex, but here it also works to establish the primary characteristics of a key-stone animal in the Aztec world.

Indeed, the jaguar's skin was its defining characteristic, and it is key to the word's appearance elsewhere. *Ocelotl* occurs in the names of animals and plants that were varicolored. In *oceloxochitl* and *ocelomichtli*, the *ocelotl* modifier refers to the spotted surface of this flower and fish. In the case of *oceloxochitl*, glossed as "tiger lily," the text notes, "it is called *oceloxochitl* for the reason that the yellow ones are sprinkled with red, the chili-red ones are sprinkled with yellow."⁵⁵ In both *oceloxochitl* and *ocelomichtli*, *ocelotl* carries the signification "varicolored," but in other terms, including those that refer to *ocelotl* warriors and to the *ocelotl* paraphernalia of gods and rulers—their *ocelotl* clothing, footwear, mats, and cushions—the term carried connotations of bravery, dexterity, and humility. Aztec hunters witnessed these characteristics in the jaguars they encountered in the wild.

To native speakers of older Nahuatl (and to Nahuas today), wild animals—especially sizeable ones—were *tecuanimeh*, “people eaters,” a word that describes one crucial relationship Nahuas had to jaguars. Again and again the Florentine Codex identifies ocelots and jaguars as “wild” and groups them with other wild animals, such as the bobcat, the serpent, the spider, the rabbit, and the deer. Perception and perspective are key in understanding Nahua folk biology.⁵⁶ As Leon García Garagarza confirmed to me, “the Nahua taxonomy was not as linear as ours—both the small ocelot [*Leopardus pardalis*] and the larger jaguar [*Panthera onca*] would have been called Ocelot in antiquity—they are both felines, morphologically related carnivor[es]—and hence dangerous, ‘Man-eaters’ [*tecuanimeh*] animals. Spotted felines, essentially.”⁵⁷ Given that the felines were *tecuanimeh*, it is worth considering that Aztecs called these animals by the same name because they looked and acted alike from a human perspective, that is from the perspective of someone about to be eaten.

The physical description of *ocelotl* in Book 11 stresses the significance of the interchangeable perspectives of hunter and prey between the human and the jaguar. The jaguar’s hunting prowess became a source of inspiration in elite Aztec military and divinatory cultures.⁵⁸ An account of how humans hunted these cats appears near the end of the entry on *ocelotl*, and it concludes by explaining the unskilled archer’s fate:

And the hunters have their reckoning (as well as their custom) that they shoot only four times. If he shoots four [arrows], the hunter is [as good as] dead. There upon the ocelot prepares itself; it stretches, it yawns, it stirs, it shakes itself; it cleans itself, it licks itself. Then indeed it crouches, springs, flies through the air. Whether the hunter stands ten spans—even fifteen spans—away, there it goes to seize him. Only once does it leap—fly—swish—bristling, its hair ruffled. There dies the hunter; there he is eaten.⁵⁹

This passage portrays the *ocelotl* as a confident hunter practically bored by the task before him: the people-eater yawns, licks his paws, and pounces. The *ocelotl* imparted these same characteristics—patience, ferocity, accuracy, and deadliness—to Aztec warriors in the *ocelotpetlatl*, the Order of the Ocelotl.

The *ocelotl* figured prominently in the language and imagery of the Aztec military and in its ritual culture. One

of the Aztecs’ most prestigious military schools, the Order of the Ocelotl, took its name from these animals, and both the *“ocelotpetlatl* and *oceloyotl* were considered appropriate terms to refer to particularly brave warriors.”⁶⁰ Aztecs associated the *ocelotl* day sign with bravery and fierceness, and according to its various uses in the Florentine Codex, the word also connoted nobility, humility, dexterity, command, and glory.⁶¹ Aztec deities and rulers wore *ocelotl* capes, breechcloths, caps, skirts, and sandals. They sat on *ocelotl* mats and cushions. *Ocelotl* skins and goods were the properties of rulers, warriors, and diviners.⁶²

Following their description of hunting, the scribes add a note about the *ocelotl*’s relationship to diviners:

The conjurers went about carrying its hide—the hide of its forehead and of its chest, and its tail, its nose, and its claws, and its heart, and its fangs, and its snout. It is said that they went about their tasks with them—that they did daring deeds, that because of them they were feared; that with them they were daring. Truly they went about restored. The names of these are conjurers [*nonotzaleque*], guardians of traditions [*pixeque*], debasers of people [*teyolpachoani*].⁶³

Elsewhere the Florentine Codex describes a pouch priests carried: “[the] incense bags of the offering priests were made only of paper painted like ocelot skin [*tlaoceloicuilolli*], painted to look like ocelot skin [*oceloicuiluhqui*].”⁶⁴ Notably, a painted paper bag served as a useful substitute for a real pelt pouch because the two appeared alike. Carrying an *ocelotl* skin—even a paper facsimile—imparted to diviners some of the same qualities these fierce cats gave warriors and rulers: courage, ferocity, and daring.

Jaguars and their skins clearly held prestigious places in the Aztec world. Mesoamericans physically bundled precious goods (green stones and bioarchaeological materials) in *tlaquimilolli* wrapped with *ocelotl* skins.⁶⁵ Olivier notes that “Fernando de Alva Ixtlilxóchitl described a *tlaquimilolli* of Quetzalcoatl that was made after his death and cremation with his ashes wrapped in a jaguar skin,” and in the Mixtec Codex Bodley, “4 Wind appears in front of a *tlaquimilolli* wrapped in jaguar skin.”⁶⁶ These examples, alongside the overall importance of the jaguar in Mesoamerican cultures—and in Aztec notions of military, political, and religious power—strongly suggest that some god-bodies were wrapped in *ocelotl* skins.

Jaguars and the concept of *ocelotl* functioned together

in *tlaquimilolli* and, likely, in other ritual scenarios. Jaguar pelts were grouped in bundles in trade and tribute, and they physically wrapped some sacred bundles. They draped the bodies of rulers, warriors, diviners, and gods. Jaguars' physical characteristics, their behaviors, and their pelages made them a cultural keystone species among the Aztecs.⁶⁷ In order to bundle potent talismans, diviners, hunters, and other specialists developed a working knowledge of the powers available to them in nature. This kind of knowledge—an intimate understanding of animals' characteristics, behaviors, and associations—was critical in Aztec rituals that wrapped *tlaquimilolli* or clothed other deity bodies in capes, cloaks, and pelts. Priests not only knew the lists of ornaments for each deity reported in the *Primeros memoriales* and depicted throughout the Florentine Codex but also understood what each element evoked because of their knowledge of folk biology.

TYING IT TOGETHER: SURFACES, COLOR, AND EQUIVALENCES

The inclusion of so many elements of the natural world in *tlaquimilolli*, likely the most important god-body in Aztec religion, strongly suggests that Aztec priests had a highly specialized knowledge of folk biology in addition to ritual expertise. The texts in Book 11 that describe precious stones, like turquoise, precious birds, like the lovely cotinga, or highly prized animals, like jaguars, attend to the appearance and characteristics of the objects and creatures. The accompanying illustrations often highlight these features. Taking into account appearance, material composition, and associated characteristics or behaviors, Aztecs recognized equivalences among some objects and entities that they explored and exploited in ritual activities like bundling.

Further, the descriptions of fireflies, mushrooms, and soils alongside long passages on beautiful birds, fascinating felines, and precious stones offer insight into the ways Aztecs perceived nature. The inclusion of highly valued objects from the natural world (or handmade substitutes) within *tlaquimilolli* suggests that Aztecs associated the appearance of some objects with specific characteristics, which, in particular combinations, embodied gods. Bound together, obsidian, greenstone, and bone were more than a collection of relics; they were a god. Unpacking the *tlaquimilolli* means taking each element on its own and recognizing

that in some contexts, obsidian, stones, and bones may be more than they first appeared to be.

The notion of unpacking a *tlaquimilolli* highlights a tension between the significance of exteriority and the importance of interiority in god-bodies. The obsidian, bone, stones, pelts, and textiles that embodied Tezcatlipoca in his *tlaquimilolli*, for example, were mostly hidden from the eye. It seems (to us) as if only the outermost artifact, a textile or pelt, would have been visible, and that the many other critical components of the bundle would have been hidden, if not completely undetectable. If, as I argue elsewhere, ritual manufacture was key to animating god-bodies, then perhaps *tlaquimilolli* did not occlude their contents.⁶⁸ It seems possible that by being ritually wrapped, the ordinary objects became extraordinary so that their “appearance” in the bundle was as clear to an onlooker as an iconic image of Tezcatlipoca would have been. This interplay between ordinary objects and extraordinary god-bodies offers a rich avenue for understanding the role folk biology played in Aztec religion.

NOTES

I appreciate Jeanette Peterson and Kevin Terraciano's having invited me to contribute to this collection. I have learned so much from working with them and the other contributors. I am indebted to the external readers for their feedback, and I want to acknowledge the support of my folk-biology reading group: Richard Milligan, Brent Woodfill, and Dan Weiskopf, who generously read and commented on a draft. Finally, this is my first publication as a mother, and I could not have done it without Mike, Jennings, Dory, and our little village: Kathryn, Lane, Kimberly, Kathleen, our parents, and others.

16. In “How Biological is Essentialism?,” Susan A. Gelman and Lawrence A. Hirschfeld explain folk-biological notions of essence by citing the butterfly as an example: essence demonstrates that “a caterpillar, chrysalis, and butterfly are in a crucial sense the same animal.” Gelman and Hirschfeld go on to say that this centuries-old concept has no basis in biology: “[B]iologists insist that biological species do not truly have essences, and certainly other essentialized categories such as race lack biological coherence. Still, despite the fact that essentialism may yield little insight about the nature of the world, it promises to yield insights on how the human mind constructs reality.” See Gelman and Hirschfeld 1999, 403–405.

68. Bassett 2015, 130–136. The vital nature of surfaces is embodied most exquisitely in (the) *teixiptla*, a word whose meaning—“one characterized by a flayed surface”—depends on appearance, physicality, and exteriority. Linguistically, *teixiptla* is inherently possessed, so the god-body is always someone’s body. In the case of human god-bodies, the person not only looked like the god but also learned to speak, act, and be the god. Clearly interiority mattered.

Powerful Words and Eloquent Images

DIANA MAGALONI KERPEL

The *Historia general de las cosas de Nueva España*, known as the Florentine Codex (1575–1577) in its final edition, is a bilingual encyclopedia that encompasses many aspects of the Nahua culture and people of central Mexico before and after the conquest.¹ The Florentine Codex was handwritten and painted by a team of Nahua scholars and artists collaborating with fray Bernardino de Sahagún at the Colegio de Santa Cruz Tlatelolco—the first higher education institution in the Americas.² Sahagún in the prologue to Book 2 mentions by name four of the Nahua “wise men,” or *tlamatinime*, whom he calls *gramáticos principales* (principal grammarians), who assisted him in writing the twelve books: Antonio Valeriano, Alonso Vegerano, Martín Jacovita, and Pedro de San Buenaventura.³ Through their characteristic style of draftsmanship, I have identified twenty-two Nahua artists, or *tlacuiloque* (plural of *tlacuilo*), who participated in the creation of the images. Four of them were deemed “master painters” for the conceptual sophistication of their paintings and their excellent draftsmanship.⁴ These four master painters could very well be the four grammarians mentioned by Sahagún. The close relationship between written text and image in the Florentine Codex may shed some light onto the nature of their practice as intellectual leaders of the project, for if they were considered *tlamatinime* (singular *tlamatini*, “he who knows something”), keepers and creators of knowledge, they would have mastered the ancient way of writing through images.⁵

In this chapter, I review some significant ways in which the bicultural creators of the Florentine Codex (the *tlamatinime* and *tlacuiloque*) connected the handwritten alphabetic texts (a form of recording knowledge that is of European origin) with the images (which are related to the ancient Mesoamerican tradition of writing through painting). I focus on two fundamental categories of Nahua culture: the concept of “words of the ancient ones,” *huehue-tlahtolli*,⁶ linked to what we refer to as the transmission of knowledge through “oral tradition,” and the practice of painting as a creative action linked to the primeval time when the gods gave form to the world, called *in tllili in tlapalli*, “black ink, red ink.”⁷ I also focus on how some images become *ixiptla*, a Nahua concept that has been translated as “substitute,” or “impersonator.”⁸ I propose that the concept of *ixiptla* or *teixiptla* can also be understood as “living image,” or “image/presence,” and that the materiality of the paintings themselves was motivated by this ontological concept.⁹ I focus on the first and second books, which concern the gods and their festivities, for, as Guilhem Olivier notes, in describing the religious festivities in these books, the artists painted acts of devotion and offerings that were presented to sculptures representing the gods, but these sculptures were actually depicted as living persons.¹⁰ In this regard, these late sixteenth-century Nahua paintings of the gods would have been made as performative agents that guided the relationship between text and image.¹¹

TLAHTOLLI, "THE ANCIENT/ POWERFUL WORDS"

Tlahtolli, a Nahuatl word translated as language, discourse, or speech, has a particular reference to the narratives that keep cultural memory alive. In most Mesoamerican traditions, and specifically for the ancient Nahua, these "powerful words" were recorded as "paintings" in books made with bark paper or deer hide folded in an accordion fashion.¹² These images were decoded by the initiated reader *tlamatini*, who uttered *tlahtolli* preserved as oral tradition.¹³ John Monaghan and Mark King have both shown how in the ancient Mixtec traditions sacred texts, which were also composed of images, contained what they have referred to as the script for the performance of histories. Images thus served as notation of a larger performative narrative that could be danced, sang, or recited, and as such, images had the agency of reactualizing memory, history, myth, and ritual.¹⁴ Furthermore, as King posits, painted books are termed *tacu* ("to paint," "to hear," "to listen") in Mixtec, a word that implies both representation and recitation, and were also referred to as *tutu* ("page," "design," "to whistle"), a word related to *toto* ("to sing"). Thus, books connected metaphorically meaning, performance, sound, and painting.¹⁵ The performative nature of these powerful words is made evident in the sixteenth-century Nahua manuscript known as *Cantares mexicanos*. Although the manuscript is rendered in alphabetic writing, the songs themselves reveal a unique, distinctive tradition where the singing itself becomes palpable, materializing an ulterior world formed by music and precious materials such as jade, flowers, and feathers, and thus relating *tlahtolli* with these meaningful materials.¹⁶

Pedro Pitarch explains that for the Tzeltal Maya peoples of Chiapas, as for other Amerindian cultures today, the "ancient words," as opposed to the quotidian language or "new words," refer to the primeval narratives of origins (legends), the ritual dialogues, the shamanic chants, and certain songs and music.¹⁷ These "ancient words" do not exist in the ordinary solar world but on the "other side," a sacred realm that has a different ontological status and that can be accessed only through ritual and dreams. There in that other place, sometimes called the "underworld" by Mesoamerican scholars, the ancient words, and the images that help to represent them, reside. Pitarch calls these images "cuerpo-presencia" (body-presence); in Tzeltal Maya, *winikel*, from *win*, "to appear," "to show itself."¹⁸

This idea is similar to the concept of *ixiptla* in Nahuatl.¹⁹ It is through a specialized process that both the words and the images are brought from the "other side" into our time and place. The ritual specialists who do this are "wise men," *tlamatinime*, keepers of their tradition. I want to propose here that the paintings in the Florentine Codex help to transform the Nahuatl and Spanish texts into ritual discourse, song, or performance that carries on *tlahtolli*. That is, without the images the alphabetic texts would not reflect the power of the "ancient words," the *tlahtolli* of the Nahua. The images serve to add a necessary layer of meaning—a ritual or supernatural meaning. In this sense, the images enable the books of the Florentine Codex to become *tlahtolli*. Reading both images and texts in the proper manner would be equivalent to Nahuatl song, expressed by the metaphorical couplet *in xochitl in cuicatl*, "the flower, the song," the correct enunciation of *tlahtolli*—as performative action that is different from merely reading the texts.²⁰ Moreover, as León-Portilla has remarked, the *tlamatinime* were the keepers of knowledge, for "*in tli-lli in tlapalli* [the black ink, the red ink] belonged to them, to them belonged the codices."²¹ Without these images painted with a black outline filled with many colors (*tlapalli* in the couplet can also be translated as "all the colors") there was no knowledge, no *tlahtolli* to be recited. As King has observed, there are multicolored scrolls in the Mixtec Codex Vienna that evoke sacred, living energy emanating from the smoke of copal offerings, from the first rising of the sun in mythic times, from music, and from the speech of historic characters. These multicolored scrolls, King concludes, are a representation of "song" as "a spiritually heated offering that rises skyward."²²

As Pedro Pitarch has proposed in his translation of the shamanic chants and prayers of the Tzeltal Maya of the Altos de Chiapas, the action of pronouncing songs (the powerful, sacred words) is conceived by the Tzeltal as an "unfolding," as when flowers open to release their scent. The words of the sacred chants come from "the other side" into this solar world through dreams. The words, and the visions (the images), are thought to live on the other side in an ancient book. The Tzeltal dreamer keeps the words and images of the book in his or her heart. The sacred words, Pitarch further explains, come into this world folded, inverted, closed in a wrapper; the songs sung in the ritual throughout the night help the shaman to "unfold them, to open them as flowers, and it is then when these words

can perform their power.”²³ This same concept is an essential part of Nahua song, for as Tomilson explains, referring to the *Cantares mexicanos*, these songs routinely feature flowers that reveal the “sacred immanence of fragile earthy things.” Flowers, as human lives, fade quickly, but the singing evokes their substance, and “song and flower undergo the sacred transformation of the material here-and-now.”²⁴ The Nahua contributors to the Florentine Codex refer to the same ideas about the supernatural origins of art and song, whereby the “good artist,” the *toltecatl*, is described as someone who knows how to dialogue with his own heart (where the book of knowledge is kept), who has the presence of the sacred in his heart, and who knows how to compose chants, music, and song.²⁵ If the images in the Florentine Codex transform the handwritten texts into “ancient words,” or *tlahtolli*, the process of painting can be understood as an unfolding—in a similar manner to the unfolding and vocalizing of the shamanic chants; that is, the *tlacuiloque*, the painters, “unfold” the images from the otherworld and bring them into the solar world, the present, through the process of painting. In fact, the Nahua song “In Your Painting Place” clearly describes this process and the role of the painters as cocreators with the gods:

You paint with flowers, with songs, Life Giver. You color the ones who will live on earth, you recite them in colors, and so you are hatching eagles, jaguars, in your painting place. You are here on earth!

(xochitica oo / totlatlacuilohuan ipalnemohuani cuica-tica oo

toco tlapalaquiya tocotlapalpohua y nemitz i tlaltic-pacco yc

tictlatlapana cuauhyotl oçeloyotl y motlacuilolpani ça tiyanemim ye nican i tpacca ohuaya ohuaya)

And so you are giving outline to these comrades, these companions, these nobles. In colors you recite the ones who will live on earth, and so you are hatching eagles, jaguars, in your painting place. You are here on earth!

(yc tictlilania cohuayotl / a yn icniuhyotl a y tecpilotl huiya

tocotlapalpuhua y nemitz i y tlalticpaco yc tictlatlapana cuayotl

oçeloyotl y motlacuilolpani ça tiya nemi ye nican i tpacca ohuaya ohuaya.)²⁶

This song is actually describing the power of paintings to create the world. Life as we know it in this solar time

is the unfolding of words and images of the otherworld. Paintings, reliefs, sculptures, and monuments, such as the pyramids, were the flesh and the bones of the created world—a layered visualization of the ancient primeval world of myth. Through these works the ancient peoples kept memories of mythical time, of creation that was recreated each time through the poetic reading of paintings, *tlahtolli*.²⁷

In the following section I will focus on the way images and texts work together as *tlahtolli* in the first two books of the Florentine Codex, which deal with gods, rituals, and religious festivities. However, I precede my analysis of these two first books by describing the process of painting as meaningful, using the concept of “unfolding” presented by Pitarch. As the “correct” enunciation of the shamanic chants unfolds the power of the words, the correct process of painting allows for the “unfolding” of visions into the creation of living images, or *ixiptla*.

MEANINGFUL PAINTING MATERIALS

In the book *Colors of the New World* I employ scientific and art historical methods to explain the process of painting the Florentine Codex as a practice imbued with meaning.²⁸ Chapter 11 in Book 11 of the Florentine Codex is devoted to “the making of all the colors.” Calling that chapter a “Nahua Treatise on Painting,” I describe how the *tlacuiloque*, by employing two different resources—painting and writing—document the natural sources for the pigments, how the colors were produced, and how the artists painted with them. The *tlacuiloque* conceived of the colors as a system of binary oppositions or complementary polarities—the same polarities that constitute the living world. They distinguish two realms from which colors are obtained: those made with flowers and insects, living matter that depends on the energy of the sun; and those made with minerals found beneath the ground, which do not need the sun to exist, and actually represent the deep, humid, and dark energy of the earth and the underworld. The Nahua believed that the world itself was created by these complementary oppositions: the deities that belonged to the underworld, where only moonlight existed, were akin to colors made with minerals; the divine forces that belonged to the realm of the sun were akin to the colors made out of flowers and insects. In this manner painting was a creative act in which the materials mimicked the forces of nature. Thus, the making of a painting, its sheer materiality, sup-

ports the idea of imagining the images as “living presences” and *ixiptla* that resulted from the “unfolding” of a vision brought from the otherworld into the present.

The power of the materials of “song” (*in cuicatl in xochitl*)—that is, feathers, flowers, and jade—to bring forth the power of the otherworld into the present is clearly demonstrated by the proceedings against Nuño de Guzmán, the conquistador of Nueva Galicia, made in Huejotzingo in 1529 and analyzed by Alessandra Russo. Guzmán was accused of requesting that the chief of the town give him “an image of St. Mary made with gold, to take it with him to war.” The council of elders of the town, however, decided that the image was not powerful enough to go into war and decided to commission an image of Mary made in gold and feathers. In order to accomplish this the council traded twenty slaves for “three gold ingots and nine green plumages.” The proceedings from Huejotzingo describe in detail the length, color, and appearance of the plumages, explaining that these “precious feathers” were meant to protect the image. As Russo further notes, the witnesses in the document explain that the feathers had to be used as the enclosure or frame for the image of Mary, and that without them “the image simply would not have had the power needed.”²⁹ The act of painting with the correct materials resembles the act of chanting described by Pitarch for the Tzeltal shamans—a process that has to be correctly performed to be effective, for painting, as well as enunciating the ancient words, is connected to the actions of the gods themselves when they created the world.³⁰

BOOK 1, OF THE GODS

Book 1 of the Florentine Codex begins with six folios in which the paintings cover the entire surface. Each folio is divided into four rectangles that are occupied by the image of a particular deity; this presentation is of Mesoamerican origin (fig. 10.1). In the section “twenty deities and eighty days” from the Codex Borgia, the same strategy is used in the composition; the only difference is that the outline in the Codex Borgia is red, whereas in the Florentine Codex it is black.³¹ This seemingly simple difference in color can have some significance. In the study of the pigments used in the Florentine Codex, the team of Italian scientists led by Dr. Piero Baglioni and me identified through X-ray fluorescence (XRF) that these frame lines were made with a charcoal-based black ink, the same pigment that was used to paint the outline of all the figures and to write the glosses

inside the rectangles.³² The glosses in Nahuatl and Spanish indicate three things: the original name of the deity in Nahuatl; the name in Spanish of a god from the Greek and Roman classical past that could be associated with the Mesoamerican god; and, finally, instructions that refer the reader to a section inside the first chapter of Book 1 explaining the attributes of the deity and the festivities in which the deity participated. The explanatory texts in the first chapter follow the format of the whole work, parallel columns in Nahuatl and Spanish written with iron gall ink, also identified with XRF. This ink, used only for the written parallel columns in Nahuatl and Spanish, has a distinctive dark-brown hue very different from the black charcoal pigment used in the glosses, the perimeter lines of the grid, and the outline of the figures (fig. 10.2).

The difference in the material nature of both inks (one being gall ink, the other carbon-based ink), and in the tonality of their color (the first being brownish, the second very black), helps to set aside these two groups of written texts: the first are the handwritten bilingual columns made with a gall-based ink; the second group is comprised by the glosses and the contour drawing lines of the figures and frames. The difference between the material nature and color of these two groups is a matter of importance: they establish different relationships between texts and images. The written glosses (regardless of the language in which they were written), the contour of the figures, and the rectangular containers seem to be grouped together, and it is likely they are related to a Mesoamerican tradition, for the carbon-black ink was known in the indigenous painting tradition long before the Spaniards arrived. The handwritten texts (regardless of the language) are different in their materiality and belong to the world of European writing; gall ink is European in origin and had never been used in the Americas. What is most significant about this finding is that it seems that the *tlacuiloque* were consciously creating a written and painted work that differentiates the handwritten texts in Nahuatl and Spanish from the images, relating the former to the European world and the latter to their indigenous tradition of painting. On the other hand, by grouping together the handwritten glosses, the frames, and the contour lines of the figures through the materiality of the ink used to make them, the *tlacuiloque* were also equating the text of the glosses to the images of the gods. The script written in carbon-black ink inside the rectangular frames where the gods live seems to have transformed writing into an image.

FIGURE 10.1. The gods in the Florentine Codex. Bk. 1, fols. 11v and 12. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Pedro Pitarch has called attention to the fact that writing is the act of creating an image; that is, inscribing black lines onto a surface is considered a powerful act by the Tzeltal in Chiapas today not because of the meaning that the writing conveys but merely because of the way that writing creates different shapes with color over a surface. For the Tzeltal, writing is an emblem of power that comes from the “other side,” just as the spots on the jaguars’ coats and on the skin of powerful snakes—both are considered writing. Similarly, the Tzeltal Maya consider Europeans powerful because they had writing. As Pitarch observes, in the indigenous world it is always the powerful “others” who possess writing: the Europeans, the otherworld deities and powerful beings that could cause sickness. Disease, Pitarch further explains, is visualized as black and red spots—the combination of colors that Mesoamericans

used to describe writing, in *tilli in tlapalli*, “black ink, red ink,” as a powerful text.

Thus the old Mesoamerican gods in Book 1 of the Florentine Codex acquired the newly discovered form of alphabetic writing as a sign of their power in the new world. However, the artists who created them placed black ink glosses inside the rectangular frames that contained the images of the gods and used writing as a mark of their power. Through these glosses, writing helped the traditional deities acquire the power of those ancient Greek and Roman gods with whom they were equated by the friars who oversaw the conversion of the indigenous *tlacuiloque*. Through the figurative texts of the glosses made in carbon-black ink, the *tlacuiloque* appropriated European writing and history. The gods in Book 1 are actually different from their old Mesoamerican counterparts; these gods are also European and bear writing as a proof of this new identity. The artists of the Florentine Codex created yet another layer of meaning between texts and images: there is a striking difference in the way that the Spanish and the Nahuatl explanatory texts relate to the paintings of

FIGURE 10.2. Paynal. Florentine Codex, Bk. 1, fol. 10r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

the gods in Book 1. I will focus on the image of one single deity, but what I am going to present is valid for all of the gods in Book 1.³³

The figure of Paynal (see fig. 10.2), the avatar of Huitzilopochtli, the Mexica patron deity, is richly dressed in a cape and feather headdress; he is in a seated position and in profile. The Spanish explanatory text of this image narrates the story of his festivity in which priests, dressed as Paynal, ran quickly through the city to exemplify the speed that warriors needed to achieve when facing the enemy.³⁴ The static image of Paynal in the first folio has nothing to do with the actions described in the Spanish description; thus the figure serves simply as a reference to the reader. However, the parallel Nahuatl narrative is closely tied to the painting, for the text focuses on the attributes of the costumes that define the god and describes them in detail,

making the representation very close to the description in Nahuatl:

He was dressed in this manner: He wore the costly cape made entirely of precious feathers. He also wore a feather headdress. His face was painted with stripes and with the symbols of stars. He wore on his nose a turquoise device. He was dressed as a hummingbird. He had a shield made with turquoise mosaic and wore a mirror on his chest.³⁵

We learn that in Nahuatl what defines the deity is not his actions in the festivities but strictly what he wears. Paynal is his attributes. Among these attributes, the most important ones are the royal blue cape (*xiuhlapalli tilmahltli*), made with the precious blue-green feathers of hummingbirds and turquoise appliques, and the turquoise shield (*xiuhlapalli chimalli*). Interestingly, neither of them is painted with the blue pigment that would have embodied the preciousness of those materials, the pigment we know as Maya blue, called *texotli* by the Nahua painters of the Florentine Codex. Maya blue is used in the Florentine Codex extensively to symbolize all that is beautiful and precious; the painters are able to differentiate this turquoise blue from all other blues, attaching a precise meaning to the turquoise tonality as precious (fig. 10.3).³⁶ Why was the royal cape and turquoise shield of Paynal painted gray instead of Maya blue in Book 1? The painters used a grayish blue instead of Maya blue to represent the different “energetic” quality of Paynal’s power. In this image his cape has lost its luster, its brilliance, ultimately its solar energy and character.

In his study of the production of yarn paintings in Huichol art in Mexico today, Johannes Neurath comments that the famous author Juan Ríos Martínez “suffered the wrath of the gods depicted in his paintings” because “the characters that according to the logic of Western art were simply represented in the works of yarn, do not stop ‘being gods.’” The images in Huichol art, he says, “are powerful beings and thus need to be worshipped.” In fact, Juan Ríos Martínez decided not to create any more of what he considered “high art.” Instead he concentrated on simple formulas that could be sold as handicrafts to tourists because the latter do not have the power of vision embodied by his great works.³⁷ The phenomenon experienced by Ríos Martínez may explain the subdued colors used to paint the gods of the Aztec pantheon in Book I of the

FIGURE 10.3. Maya blue pigment in an illustration of Moctezuma. Florentine Codex, Bk. 8, fol. 2v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

Florentine Codex. The *tlacuiloque* did not want to create the powerful images of the past. In the sixteenth century they could no longer revere them as they used to; that is why they did not paint the gods in their original powerful colors, particularly with Maya blue. Paynal, like the other gods featured in Book 1, as a sixteenth-century Nahuatl-Christian representation, has acquired a new powerful attribute: the alphabetic writing of the glosses.

The last important characteristic of Book 1 on which I want to focus, which is also valid for Book 2, is the constant presence of flower bands in the beginning and end of each chapter (fig. 10.4). Of the fifty-four folios that describe the gods in Book 1, only fourteen have figurative vignettes; the remaining folios have floral branches replacing the images. That is to say, only one quarter of the entire book presents drawings of the gods in the chapters that explain their attributes. Flower bands replace the descriptive images in the rest of the book. Are these flowers merely ornamental or do they bear meaning?

In Nahuatl culture and language, flowers signify preciousness, among many other things; in Book 1 they represent the precious, powerful words of ritual discourse, or *tlahotli*. As mentioned before, for the shamanic tradition of the Tzeltal, the sacred words pronounced in the chants by the shamans are seen as flowers that unfold and open; sacred, powerful words are said to have a distinct aroma, just as real flowers do when they open. Also, according to Berenice Alcántara Rojas, flowers possess the energy of the deities, their *tonalli*, or characteristic “solar heat.”³⁸ In the *Cantares mexicanos*, the most complete

FIGURE 10.4. Band of flowers. Florentine Codex, Bk. 1, fol. 4. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

work of Nahuatl songs and ritual, flowers are mentioned as the jewels of the otherworld; flowers come from “inside the mountains,” and they are described as “worthy, scented, fragrant, dressed in dew with the glow of the rainbow.”³⁹ Thus flowers come from the “other side,” to use Pitarch’s terms, and their colors and scents are intrinsic to their otherworldly power. As León-Portilla has argued, the term *in cuicatli in xochitl*, “the song, the flower,” is used in Nahuatl thought to express what is considered “truthful on earth,” what is worthy.⁴⁰

I think that the borders of flowers in Books 1 and 2 represent the worthiness and truthfulness of what is expressed in the written texts; thus they are there to qualify those words about the ancient gods as *tlahotli*, like the *in cuicatli in xochitl* of Nahuatl song. The flowers are in fact a substitute image of the deities; they are their essence, they are the *tonalli* of the gods.

BOOK 2, THE CALENDARS, HOLIDAYS, AND CEREMONIES

Book 2 presents the rituals practiced during each of the eighteen *veintenas* (twenty-day Nahuatl months), which is how the solar year, called *xiuhpohualli*, was divided. Each *veintena*, or *metztli*, had particular deities who were

honored through such ritual practices as sacrifices, dances, food offerings, and pilgrimages. How themes were represented in this book likely required special attention because many of the practices described, in particular human sacrifice in its many variants, were considered inhuman, savage, and inconceivable by Europeans. However, for the Nahuatl, human sacrifice was a fundamental part of their ceremonial and communal life. It should be noted that not all the festivities are illustrated, and those that are painted seem to follow the same ritual process in their making, emphasizing the transformative power of sacrifice and the ability of representations to capture this power.

The paintings in the second and fifth *veintenas*, Tlaca-

xipehualiztli and Toxcatl, respectively, are very significant. Several folios are dedicated to both, where the series of images take up the entire space of the Spanish column. Significantly, the order followed by the vignettes is different from the chronological order established in the texts. Both festivities begin with the most prominent image that captures the result of all the ritual actions, the apparition of a deity to whom the festival is dedicated, called the *ixiptla* (impersonator of the deity) in the Nahuatl text. The second festival, Tlacaxipehualiztli, is represented by a series of vignettes (figs. 10.5 and 10.6). The first two frames on folio 73v show the sacrifice of a captive: four men hold the limbs of the victim, and at the center a man appears to

FIGURE 10.7. The festival of Toxcatl. Florentine Codex, Bk. 3, fol. 84v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

leaving the house where he was kept for a year. The following (middle) frame shows the young man playing the flute in the streets. This same flute will be ritually broken in the Templo Mayor before the captive's sacrifice (as shown in the third or lowest frame of the previous vignette in folio 84v). The third frame shows the participants attending to the *ixiptla* of Tezcatlipoca. The *ixiptla* of the god is the first and last representation of the series of framed paintings. In the two mentioned *veintenas*, Tlacaxipehualiztli and Toxcatl, images and text relate to each other, but the syntax of ritual dictates the manner in which images are presented, whereas the texts follow a linear narrative

order. That is, the paintings of the *veintenas* actually serve a ritual purpose while also being illustrations. In other words, the images elaborate on the text and do not merely complement it. This example suggests that the painters were preserving aspects of their own pictographic traditions in spite of the strong European, Christian influences on their work.

Probably the best example of how the *tlacuiloque* created images according to notions and traditions that have nothing to do with concepts of Western representation is the image of the festivity of Panquetzaliztli (fig. 10.9). During this festival young people from different neighbor-

hoods, or *calpolli*, fought in a skirmish or allegorical battle with young warriors who were trained at the *calmecac*, the official state school. It is also said that on the fourth day of the festival slaves who had been ritually sacrificed would appear on the earth while the mock battle was taking place. The sequence of paintings illustrating this ritual is very particular. In the first frame we see two youths facing each other and a larger man in the middle who has tangled hair and a heart hanging from his neck. These youths dressed in cotton capes represent the groups that fought each other, the youths of the *calpolli* and the ones of the *calmecac*. They can be seen fighting with wooden sticks in the frame below. Again, the sacrificial victim, transformed into the

ixiptla of a powerful being, appears in the first frame. In addition to being depicted facing forward, the *ixiptla* is larger in size than the youth, reinforcing its supernatural character. If we look attentively at this image we discover that it was drawn by a group of three different artists and that each one painted one of the figures. The young warrior on the left was crafted with a small head, straight hair, and a small nose. In contrast, the warrior on the right has a large head and a prominent nose. In my work identifying the artists of the Florentine Codex, I managed to determine that the distinct features seen here are the work of three different artists.⁴¹

The fact that different artists painted the figures is an

FIGURE 10.9. The festival of Panquetzaliztli. Florentine Codex, Bk. 2, fol. 143v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

act that gives each figure a sense of individuality. This dual authorship suggests that the act of painting them was part of the ritual itself, for each figure represents a different contingent, the *calpolli* people and the *calmecac* youths. Another artist who also worked on Books 2 and 4, to whom I refer as “the painter of complex skin colors,” painted the captive-*ixiptla* who appears facing forward.⁴² His style is similar to European engravings, as he uses shading to create the illusion of volume. The painter used an intense pink hue to color the skin of the sacrificial victim, and thus differentiates him from the two young contending warriors created by the other two artists.

Book 2 uses visual strategies that might have remained

hidden to any observer outside the indigenous tradition of painting. These strategies follow a ritual logic that not only conveys the sacredness of the appearance of the *ixiptla* in the festivities but also signifies that the paintings continued to be imbued with a ritual reality. The *ixiptla* are presented frontally, they are greater in size than humans, and they are always at the beginning and the end of a series of images, the alpha and the omega, as the creator gods of the Aztecs. These *ixiptla* can be compared to one of the greatest *ixiptla* of all time, who was at the beginning and the end of life: Coatlicue, the mother of creation. All of the *ixiptla* represent the culmination of a complex and long ritual, and all of them are an expression of a moment in

time when the actions of sacrifice summon the powerful “other” that creates and destroys life. Coatlicue and the *ixiptla* in Book 2 of the Florentine Codex were made in accordance with a ritual and artistic tradition that reveals images as powerful because they unfold in their making a ritual world and its actions.

We should continue to investigate the power of writing and painting as indigenous arts related to ritual. In the Florentine Codex, as I have shown, alphabetic texts contain the power of the other, the European, whereas images possess the power of the otherworld where deities live. Together they form the unique world that the Nahua artist-writers were able to evoke—or rather to unfold—before our very eyes.

7. Magaloni Kerpel 2014, 16–18.
8. Molina 1992, fol. 95v (2nd num.). Molina records this word as “[t]eixiptla. imagen de alguno, sustituto, o delegado.” He also gives “[t]laixiptlayotl. imagen pintada [painted image]” on fol. 122v.
9. Elsewhere I have discussed the possibility of applying the concept of *ixiptla* to the paintings in the Florentine Codex, based on the ideas of the following authors (see Magaloni Kerpel 2014). First, the *Anales de Juan Bautista*, a collective book by indigenous painters (1564–1569), records the sacred images of the Virgin, Jesus, and the saints in oil paintings, cornstalk sculpture, silver bas-relief, and mural painting as *ixiptlatzin*, in which the suffix *-tzin* is reverential (see Reyes García, 2001, 150, 296, 300). Arild Hvidtfeldt (1958, 80–89) considers the *ixiptla* as the living presence of the gods and extends the concept to plants and objects. Alfredo López Austin (1973, 118–121) analyzes *ixiptla* as “a wrapping, clothing, or envelope” infused with sacred, creative heat. In his view, the key of this concept is the morpheme *-xip*, which is derived from *xipehua*, “to flay,” “to peel the skin,” thus indexing skin as a powerful, symbolic envelope. Serge Gruzinski (2001, 50–51) reflects on the differences between the Western concept of “image” and that of *ixiptla*, stressing that the Nahua notion of representation did not trace the reality of the senses but referred to the envelope, the skin enclosing a divine force. Finally,

Salvador Reyes Equiguas (2006, 89–91) posits that *ixiptla* were always the product of human creation: sculptures in stone, wood, and edible dough or live slaves wearing costume. He specifically states that they could be paintings on hide, paper, or stucco, any human creation that would have “eyes” and “mouth” to become alive.

PART IV

SOCIAL DISCOURSE AND DEVIANCE

THIS PAGE INTENTIONALLY LEFT BLANK

Rhetoric as Acculturation

The Anomalous Book 6

JEANETTE FAVROT PETERSON

Among the twelve books of Bernardino de Sahagún's encyclopedic Florentine Codex, the sixth is prominent and anomalous. Book 6 is inserted at the nexus of the Franciscan friar's vast project, between the texts dedicated to the sacred realm and those of the human and earthly domains. The book compiles oral discourses known in Nahuatl as *huehuetlatolli* (speech of the elders) that are at once lofty in tone, replete with metaphorical language, and pragmatic in their social and political implications. To reinforce this rich legacy of Nahuatl, a collection of adages and proverbs is appended at the end. Book 6 tells us that oration was held in high esteem in Aztec culture and was cultivated as an art by officials of the state as well as those who guided behavior and values at the local and family level. Rhetoric in this chapter is narrowly constructed in the classical sense as verbal persuasion intended to shape and validate communal values. Given the prestige that rhetoric also held in the educational programs of early-modern Europe, the acculturative power of oration was mutually appreciated after the conquest, when language from Nahua elite speech was harnessed to serve the Christianizing program of the mendicants.¹

Reserving the highest praise for this book, Sahagún singles it out in his Latin inscription as "the greatest of them all, as much for its length as for what it expresses."² Indeed, Book 6 constitutes the second longest book (215 folios) and was first bound as a separate volume (in a series of four). Moreover, in a singular gesture, Sahagún dedicates it to fray Rodrigo de Sequera, the commissioner

general of the Franciscan order and, with his 1575 arrival in Mexico, the catalyst for the creation of the Florentine Codex. Sahagún also lauds the book's "very elegant, very moral prayers," as well as the "esteem in which the rhetoricians and orators were held" by the Nahuas.³

The *huehuetlatolli* recorded in Book 6 comprise Sahagún's earliest material, gathered in 1547 and partially penned in the *Primeros memoriales* of 1558 to 1561.⁴ Thus, the famed Aztec prayers and speeches are among the most authentically Nahua in language and concept. While Sahagún's collaboration with his intercultural Nahua brokers necessarily accommodated indigenous epistemologies throughout the Florentine Codex, Book 6, "de la rethorica y philosophia moral y theologia," exists in uneasy tension with its contents.⁵ On the one hand, its texts capture the Aztec worldview and social mores. On the other, the book's contents betray conflicting views on the power of indigenous speech, on the utility of the *huehuetlatolli* in constructing Christian discourse, and on the composite, often contested nature of visual representation in sixteenth-century New Spain. As in Book 12, on the conquest, Book 6 reveals the paradoxical relationship between the indigenous nature of the text and its "Europeanized" imagery in style and iconography.

The movement from precontact orality to the colonial hegemony of alphabetic writing is everywhere apparent in the Florentine Codex, mediated by shifts in the textual translations and the figurative content of the imagery, including an inventive range of speech glyphs.⁶ Evidence of this transition is revealed in the inescapable limitations of

FIGURE 11.1. Ruler exhorts youths: sons (top) and daughters (bottom). Florentine Codex, Bk. 6, fol. 70r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

letters and pictures to capture the rhythms, to say nothing of the nuanced poetic intent, of the Nahuatl spoken word. In contrast to the syntactical and conceptual linearity of European rhetoric, Nahuatl spoken communication was more free-form, metaphorical, and repetitive.⁷

The Nahuatl scribe-painters, the *tlacuiloque*, were faced with even more daunting translational challenges: consistently navigating the terrain between cultural traditions and appropriating elements that drew on both indigenous and imported sources to construct their images.⁸ Within a Euro-Christian framework, the artists continued to be inspired

by an older pictographic tradition; in the process, they foregrounded, and in some cases endorsed, their own values and practices.⁹ The creative interchange between discrete ways of speaking, writing, and seeing that generate knowledge are revealed in a comparative analysis of the bilingual texts and images. In this chapter, I also attend to the relevant pictorial element, generally neglected or omitted altogether from the more ample scholarship directed toward translating the *huehuetlatolli* or discourses themselves (fig. 11.1). While the uniformly black-and-white images of Book 6 cannot be uncoupled from the accompanying textual narratives, their

monochromatic nature and mixed iconographic and visual syntax raise questions about the book's models, its intended viewership, and its completion in 1577, the final year of the Florentine's production.

RHETORIC AND THE ENCYCLOPEDIC TRADITION

Understanding the use of rhetoric as a technique to transmit knowledge and regulate behavior requires a brief foray into Bernardino de Sahagún's humanist education.¹⁰ At the University of Salamanca, knowledge was imparted not only through traditional lecture-style discourses on the latest intellectual trends but also through access to a burgeoning scholarly world in print. Sahagún's student days coincided with the increased literacy that came with the printing press and the university's curricular expansion.¹¹ Antonio de Nebrija (1444–1522), famed classicist and grammarian, occupied chairs of Latin and rhetoric at the University of Salamanca. Nebrija was among a group of scholars who introduced the study of sacred texts in their original languages, Greek, Hebrew, and Chaldean (or Aramaic), and elevated the status of vernacular Spanish by publishing its first grammar.¹² As professors themselves, Nebrija's students further innovated the approaches adopted to understand classical texts.¹³ At this propitious moment, impressionable scholars like Sahagún were exposed to the philological avenues that opened up cross-cultural inquiry and were made aware of the drive to fix and order knowledge in print.¹⁴

Nonetheless, in addition to his education in theological matters and honing his homiletic skills, Sahagún pursued a traditional program based on the seven liberal arts, among which rhetoric was considered one of the higher expressions of intellect. Rhetoric, grammar, and logic (the trivium) were taught along with the mathematically based studies of arithmetic, music, geometry, and astronomy (the quadrivium). Printed handbooks transmitted the *ars rhetorica* of Aristotle and ancient Rome, dispersed throughout Europe and overseas, including to the mission libraries of the Americas. Classical rhetoric was systemized and made dependent on the written word. Early-modern European emblems of rhetoric, for example, include an accompanying book or scroll with the allegorical female figure as *rhetorica*, thus pairing orality and textual literacy, as seen in an engraving by Diego Valadés, Sahagún's fellow Franciscan (fig. 11.2).¹⁵

In New Spain by 1529, Sahagún possessed the necessary intellectual framework to embark on a comprehensive project of Aztec civilization, initiated by his interest in words and rhetoric.¹⁶ The rationale for labeling the Florentine Codex "encyclopedic" rests on the many structural parallels between several classical and medieval prototypes and the Florentine Codex, schemata moving from the celestial to the earthly realms that also appear in the diagrams of Diego de Valadés's *Rhetorica christiana* of 1579.¹⁷ Suffice it to say, over several decades, Sahagún and his Nahua collaborators had diligently collected information on all aspects of preconquest Aztec life, collating and revising his notes in various monastic venues.¹⁸ The friar and his indigenous team produced the Florentine Codex in the Colegio de Santa Cruz at the Franciscan *convento* of Santiago Tlatelolco, where they exploited the contents of its library. Although heavy in theological tracts and commentaries on the Bible, the Tlatelolco collection still contains surprising breadth in the humanities, from Alciati's emblem book to Ptolemy's *Geographia* and treatises on rhetoric (Cicero and Quintilian, for example, were represented).¹⁹ Also found on the library's shelves were several encyclopedic compendia, including two well-known works that devote considerable attention to rheto-

FIGURE 11.2. Emblem of rhetoric. Detail of engraving, "The Seven Liberal Arts," in Diego Valadés, *Rhetorica christiana*, fol. 17. Getty Research Institute, Los Angeles (2860-179).

ric: Pliny's *Naturalis historia* and the seventh-century *Etymologiae* of Isidore of Seville (580–636).²⁰ Sahagún and Pliny share certain literary tropes when they describe their works as a “treasury” (*tesoro*), and both reflect the same desire to contain and preserve the treasured memory of things through words. For Isidore of Seville, the origins of words additionally enabled him to extract the meaning of all things. Moreover, according to Isidore's *Etymologiae*, eloquent rhetoric was a civilizing force “designed to persuade people to the just and the good.”²¹

In the fifteenth and sixteenth centuries, classical rhetoric spread rapidly in Europe, meeting the needs of both humanists and Christian scholars, as well as leaders of the new nation-states looking for educational tracts on statesmanship.²² Projecting these goals onto the Aztecs, Sahagún states that it was their “wise, superior and effective rhetoricians” who “ruled the states, led the armies and presided in the temples” and allowed them to assume imperial dominion.²³ Sahagún underscores, as does Pliny, the place of language and rhetoric as the divide between the civilized and the barbarian, and a necessity in ensuring strong leadership and effective governance. Diego Valadés further invokes the role of rhetoric as a major tool in the pacification of the New World “savage.”²⁴

The goals of rhetoric were “to teach, to convince, and to rouse,” as stipulated in the educational treatise of the Spanish humanist Juan Luis Vives (1492–1540).²⁵ Persuasive speech in a well-educated individual was indicative of a person's judgment, moderate behavior, and clarity of thinking. Christian theologians and thinkers articulated a more expansive role for oratory; Saint Augustine, for example, drew on it to “move the hearts of the audience” and to promulgate Christian precepts.²⁶ It is clear that there was a shared recognition regarding the power of rhetoric and a great curiosity, certainly on the part of Sahagún and other Franciscans, on its presence and practice in New Spain.

IN CENCA QUALLI TLATOLLI (A VERY GOOD DISCOURSE)

Book 6 contains a collection of Nahua *huehuetlatolli*,²⁷ from *huehue*, or very old, and *tlatolli*, a term that can mean “word” but more expansively encompassed speech, statement, or language. Molina defines *veuetlatolli* as “ancient history” or “sayings of the elders” (*historia antiqua; dichos de viejos*); I will use the term to refer to the “speech of

the elders,” emphasizing the oral transmission of knowledge or wisdom from one generation to the next.²⁸ Like a Greek chorus, the forefathers or progenitors were always “present” (as embodied in the elders) to comment on Aztec society and thus provide guidance in navigating life's major events. Although we find abundant use of *tlatolli* and *tlatoliztli* (the act of speaking) in Book 6, as well as the phrase “words of the old men” (*intlitol vevetque*), curiously, the precise term *huehuetlatolli* occurs only once.²⁹

The essential orality of Nahua culture is acknowledged at the beginning of every chapter in Book 6 with the statement, “Here are told the words which truly issued from their hearts when they spoke.”³⁰ As an animistic center, the heart generated comprehension and memory, as well as having a profound affective role.³¹ The enduring strength of an ancient oral tradition is given concrete expression throughout the Florentine's imagery where speech scrolls are ubiquitous, varied in form, and, in some cases, continue to fulfill similar functions as those found in Aztec pictographic script, as described later. More broadly referred to as “sound scrolls” in the study of ancient Mesoamerica, they represented visually the emanations related to breath, vitality, smoke, speech, and song, crossing sensate boundaries.³² As one of the bodily exhalations, speech scrolls were associated with life (the breath-soul), a linkage that remains remarkably intact in the Florentine, particularly in describing a ruler's vocalization.

In some of the earliest creation myths, the ability to communicate verbally set humanity apart and defined its relationship with the gods. Proximity to the divine, of course, was a prerogative of the upper classes, especially the royalty, as were their more refined sensory responses. In Mesoamerica's hierarchical cultures, mastery of speech demarcated social rank; conversely, those of the highest status were expected to retain and recite long passages with verve and fluidity. Incantations, songs, and admonitions were characteristic of rulers, noblemen, ritual specialists, and the wise ones (*tlamatinime*), in short, all those in vital positions of authority. Special terms identify these elevated forms of speech in Book 6, such as *tecpillatolli* (noble or courtly utterances), *tecutlatolli* (lordly speech), or *tlatocatlatolli* (ruler's speech).³³ With proper upbringing, Aztec elites were not only “noble of heart” but also “gentle of words.”³⁴ The power of the tongue was embodied in the Aztec ruler, called the *huey tlahtoani* (or *huei tlahtoani*: great speaker), a speech scroll emanating from his mouth, as much a signifier of his office as his royal diadem (*xihuitzo-*

lli), nose plug (*yacaxihuitl*), and high-backed, woven-reed throne (*in petlatl in icpalli*).³⁵ Within Motecuhzoma II's (r. 1502–1520) composite name glyph, carved and painted on Aztec monuments, the addition of a speech scroll connoted the inalienable prerogatives and heightened presence of divine kingship, as analyzed by Patrick Hajovsky.³⁶

The energy involved in speech as an extension of an emoting, thinking individual is captured in the paired phrase “his breath, his word” (*inijo, itlatol*).³⁷ This was a life force (*tonalli*) magnified in the Aztec supreme leader, who was conceived of as the deity's mouth, jaw, and “flute,” as well as his “godly sheddings” (teeth, fingernails). Royal orations articulated the commands of the supreme god, Tezcatlipoca, through whom the ruler governed; conversely, an ungoverned city was mute, dark, and without direction.³⁸

Scholars disagree on the parameters, and thus on the count, of *huehuetlatolli*. Estimates range from a strict classification of only seven intergenerational discourses to a more inclusive definition of over one hundred *huehuetlatolli* that recognizes the fluid boundaries between Nahua verse and prose and incorporates both the longer formal admonitions and the dispersed remnants of these discourses.³⁹ In Book 6, the *huehuetlatolli* encompass prayers to the gods, courtly discourses, judges' admonitions, congratulatory orations, and professional advice, both practical and ethical. By Thelma Sullivan's count, among the forty-nine *huehuetlatolli* in Book 6, there are eight prayer-like invocations to two prominent deities, Tezcatlipoca (seven) and Tlaloc (one), followed by seven recitations delivered at critical moments in the life of the state by the ruler or his lordly subjects at the time of his election. Next in order are thirty-four speeches given by elders, merchants, matchmakers, and midwives that mark significant rites of passage, such as marriage, birth, entry into school, and death.⁴⁰

In Aristotelian terms, the majority of the *huehuetlatolli* fall into the category of civic speeches that are epideictic, setting societal standards through techniques of praise or blame and thus conditioning honorable behavior.⁴¹ Drawing from the vast store of Nahua oral literature at the popular level, the final three chapters of Book 6 incorporate adages, riddles, and metaphors. The internal order of Book 6 mirrors the hierarchical organization of the entire manuscript, moving from the divine sphere to more human concerns, and may help explain why this book acts as a pivot in the sequence of the codex. However, its sig-

FIGURE 11.3. Priest teaching the art of singing in the calmecac. Florentine Codex, Bk. 2, app., fol. 128r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

nificance primarily lies in the elevated nature of indigenous rhetoric that Sahagún rightly claims is the “greatest of them all for what it expresses.” The Franciscan appreciated these Nahua orations not only for their aesthetics and abundant vocabulary but also as a key to understanding the precontact worldview. As a code of Aztec civic and moral conduct, the *huehuetlatolli* rehearse how to live one's life wisely, in moderation, and on the straight and narrow.⁴² As important, they reinforced Sahagún's conviction in the intellectual and spiritual potential of Nahua society and the eventual creation of a successful Christian *república*.

Like the discipline of rhetoric in Europe, the teaching of oratory played an essential role in an Aztec boy's upbringing. In both Aztec educational institutions, the *tecpochcalli* and the *calmecac*, but most especially in the latter, priests instructed boys in the craft of oral recitation: “Very carefully they were taught good discourse. If one spoke not well . . . then they drew blood from him.” Speaking was regulated; to shout, to “murmur,” or to “squeak” betrayed ill breeding.⁴³ The pupils in the *calmecac* were also carefully “taught the songs which they called the gods' songs [*teucuicatl*]. They were inscribed in the Books.”⁴⁴ Figure 11.3 features the priest before his pupils, vocalizing the lilting “gods' songs” with a flowerlike flourish. Song texts were often described as flowers (*xochitl/cuicatl*), intimately allied with their sensory power, and performed within the context of dance and religious theater.⁴⁵ Of equal interest in the Florentine Codex text cited above is the reference to inscribing the songs in “the Books” (*cuicamatl*), that is, in having some kind of pictographic-mnemonic record.

It is possible the *huehuetlatolli* were similarly transcribed, as suggested by the sixteenth-century lawyer-chronicler Alonso de Zorita. In his description of parental counsel given by fathers to their children, Zorita states that the nobility (*indios principales*) still (ca. 1570) retained these speeches by memory, but he also acknowledges that the speeches could be “derived from their paintings which was like writing.”⁴⁶ Although pictographic script might have encoded a mnemonic prompt for the long formal speeches, Sullivan concludes that the sage words of the elders were committed only to memory in order to perpetuate “the traditions of a people whose form of picture writing was inadequate for this task.”⁴⁷ Indeed, Book 6 repeatedly refers to the crucial need to memorize, to guard, and to inscribe in one’s heart the ancient words.⁴⁸ It is precisely in the effectiveness of this retentive capacity and bodily inscription that Book 6 testifies to the agency of the Florentine’s writers and their fidelity to an enduring legacy.⁴⁹ Whatever the method of capturing the spoken or sung word in the precontact period, the potency and tenacity of words themselves were never in question. Book 6 reveals that the verbal art of these exempla inculcated the mores of the Aztec state and subsequently could be harnessed to help promulgate Christian values or, more darkly, endanger orthodoxy.

The shared tradition of rhetorical training converged in the sixteenth-century mendicant schools, as seen in several well-known engravings by Diego Valadés in his *Rhetorica christiana*. As the multitasking friars are shown going about their duties, a number are preaching, articulating the articles of the Christian faith, the biblical narrative of the origins of the world, and the need for penitence.⁵⁰ Although the monastic orders used oral communication in concert with didactic images as part of their multimedia arsenal deployed to transfer the new doctrine to the neophytes, the familiar cadences and vivid metaphors of the *huehuetlatolli* provided a ready-made resource for composing sermons and pedagogical material.⁵¹ Sahagún encourages preachers to emulate the Nahuatl orations of royal parents to their daughters when he states, in Book 6: “Because of their language and style, these two speeches if given from the pulpit *mutatis mutandis* would be of more use than the many sermons for young men and women.”⁵²

However admiring of the eloquence of Nahuatl speech, the friars were also fully aware of its dangerous potential to undermine the missionizing efforts. The dance songs mentioned before were perceived as a way to draw

natives to Christianity but also continued to be highly suspect by the Catholic Church.⁵³ Sahagún not only distrusts the subtexts of the “obscure” (the Spanish reads *cerrado*, or closed) verses but also fears the propagandistic fervor of the songs. The ancient songs continued unabated, he claims, only superficially “cleansed,” as those that “deal with the things of God and His Saints, they are enveloped in many errors and heresies.”⁵⁴ In addition to his underlying anxiety about the intransigence of the indigenous population, Sahagún is guilty of editorializing, with an occasional slippage into Christian phrasing. For example, Tezcatlipoca’s omnipresence over “the heavens and the earth” made him ripe to co-opt as the Christian God, Señor Dios. On the other hand, he could also be demonized, as when after “el dios Tezcatlipoca” Sahagún inserted, “o por mejor dezir, Diabolo.”⁵⁵

FROM PAINTED WORD TO ACCULTURATED IMAGE

Just as the range and quality of oration is amply described in the Nahuatl texts, from language that is lyrical to a vocabulary considered loud and obdurate (as “words of stone, words which are clubs”),⁵⁶ many of the Florentine’s images display an expressive array of speech-scroll glyphs. As visual analogues of the textual descriptors, speech scrolls are surprisingly consistent in their basic carved or painted configuration, a comma-like form that issues from the speaker’s mouth and curls away as a single or double volute. The earliest example we have in the Sahaguntine material is found in the first of two *huehuetlatolli* in the *Primeros memoriales* (1558–1561).⁵⁷ In the image, four judges are seated on woven-reed seats above an assembly of four men and four women who are a mixture of nobles, warriors, and commoners (fig. 11.4). The judges are admonishing them for failing to carry out their responsibilities and for indulging in behavior ranging from lax to dissolute, thus breaking with Aztec social conventions. The judges’ harsh indictments for disobedience and disorderly conduct prompt tears from all but two of the listeners. Throughout, the judicial utterances are said to emanate “from the mat, the seat” (*in petlatl in icpalli*), a conjunctive metaphor for their elevated civil office as embodied in their woven-reed thrones. The value of this formal rhetoric is also conveyed through the description of the judges’ words as “green stones, like turquoises, green, round, circular.”⁵⁸ The application of jade or greenstone as a meto-

FIGURE 11.4. Huehuetlatolli, judicial oration. Primeros memoriales, fol. 61v, upper section. Códices Matritense. © Real Academia de Historia, España.

nym for good discourse connotes a “pure life”; being wise and “pure in heart” go hand in hand.⁵⁹ The geometric perfection and rarity of the gemstones are the Mesoamerican counterparts to the proverbial pearl associated with edifying sayings in Western axioms.

Only one of the judges is depicted with an open mouth; however, in each case speech scrolls roll out from their mouths, simulating sound waves. The spatial directionality of their discourse is underscored, in the cases of two judges, with deixis, a rigidly pointed index finger that dramatizes the force of the pronouncement and the prerogative of the speaker.⁶⁰ The association of the emphatically pointed index finger and the standard speech glyph that is visible in Sahagún’s *Primeros memoriales* is also evident throughout the Florentine Codex (as in fig. 11.1). In the Florentine, however, speech scrolls can also be elaborated with additive elements that qualify the manner or mode of speech with the use of several colors or a variety of af-

fixes. For Nahuas, words were inherently powerful; they could convince, assail, and cajole, with the speaker’s tonal inflection and bodily posture indexing these different intentions.⁶¹

To express the lustrous, refined value of the well-chosen, expertly crafted words of a ruler, nobleman, or judge, the most common Nahua metaphor invoked the “precious greenstone, precious turquoise,” (uel chalchihuitic, uel teuxihuitic),⁶² as noted before. In general, the inherited wisdom handed down by the elders, the “white-haired ones,” was so valued, it was also equated with “a precious greenstone . . . a turquoise . . . perfectly cylindrical” (vel chalchihuitic, vel teuxihuitic, vel acatic, vel ololiuhqui), the same metaphors (*machiotlatolli*) for new life that were applied to newborns and to tender, young plant life, as well as to other cherished qualities or persons.⁶³ The gems shared the color green, connoting life-sustaining elements such as water and vegetation, like the highly coveted quetzal feather that was “deep green, a precious feather” (in uel xopalcoac quetzalli).⁶⁴ These metaphors materialize when attached to speech glyphs as circular beads (for jade) and concentric rings (for preciousness).⁶⁵

Aztec and Mixtec representations also affix a stylized flower to speech scrolls to signify flowery speech, ritual song, or prayers.⁶⁶ In the Florentine, such floral adornments designate the harmonious chirping coming out of the beaks of songbirds,⁶⁷ the priestly instruction of song in figure 11.3, or the marketplace chant of an Aztec seller of cloaks.⁶⁸ In figure 11.5, a floral affix must evoke both eloquent and persuasive speech, as shown in a representation of a war conference where plans to besiege a city (in the upper right) are being debated. Three seated figures include two rulers with precious or royal diadems (*xiuhuitzolli*) over their heads. A third individual is a warrior of high rank who points to the map of the city laid out between them. His impassioned address is represented as a florid vocalization of his conviction in the viability of the military strategy. In this image, too, we find the enduring presence of the linguistic roles of speech scrolls that Boone has identified in precontact sources.⁶⁹ The two rulers with their crowns also have nominal speech scrolls that stand in for rulership and are differentiated from the warrior’s speech scroll by a different color. The military leader’s speech scroll, on the other hand, has an adjectival component, qualified with a prominent flower and coupled with his emphatically pointed finger. Finally, all three speech scrolls have a verbal function, identifying the protagonists

FIGURE 11.5. Making war plans to attack a city. Aztec war captain addresses two rulers. Florentine Codex, Bk. 8, fol. 33v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

in the narrative, activating the pictorial space between them, and denoting impending action.

THE ANOMALOUS IMAGES IN BOOK 6

Given the impressive range of images throughout the Florentine Codex that reify the Nahuatl texts on the prestige and inventive vocalizations inherent in speech and song, the notable absence of these elaborated scrolls in Book 6 is all the more curious. Why would the painters of a book dedicated to the *huehuetlatolli*, the highest form of Aztec rhetoric, ignore the greenstone beads, floral attachments, and symbols of preciousness that we find in the other books? Instead, unadorned, black-and-white speech scrolls are standardized (see fig. 11.1) and executed hastily in some cases. The answer to this question lies in the nature of the subject matter and the timing of the images of Book 6 at the terminal stage of the Florentine's production in 1577.

While some of the foremost scholars and Nahuatlators have analyzed the texts of Book 6, its pictorial record is understudied and anomalous in some features. For its length (215 folios), it has proportionally fewer primary images (52), a disproportionate number of ornamentals (88), and a surfeit of spaces left blank for missing images. There are likely several determining factors by way of ex-

planation. As mentioned, Sahagún greatly admired the content, elevated tone, and lyricism of the *huehuetlatolli*, of which, he claimed, "there is not a living man who could invent the language."⁷⁰ Both out of respect for the poetic refinement of the original *huehuetlatolli*, as well as for the utility of their moralizing character, the Franciscan's Spanish translation is more literal;⁷¹ ultimately his intent, like that of the friar Andrés de Olmos, was to recycle these orations, with Christian emendations, for use as sermons. This resulted in a robust column of Spanish text, leaving less room for images.

In addition, to understand the uniform black-and-whiteness of the illustrations, it must be remembered that the book and its images were among the ultimate sections completed. On the last folio of Book 6, and in the same paragraph in which Sahagún touts his authorship by including his name (although clearly not his signature), the Franciscan states that the original Nahuatl (*la lengua mexicana*) was first recorded some thirty years earlier (in 1547), and he adds the current year of 1577.⁷² Given that the images were the last of the ingredients to be added to the Florentine's bilingual texts, these pictures were the painters' final contributions and, as such, are strikingly uneven in workmanship.⁷³ Although their monochromatic nature has been attributed to a reliance on black-and-white sources, printed illustrations were the most common models for the lion's share of all the Florentine Codex images. Moreover, the thesis that black-and-white prints were more "authoritative"⁷⁴ is not borne out, since color was applied to the majority of European graphics from the fifteenth through the seventeenth centuries. The monochromatic nature of the images in Book 6 can be linked to the dire consequences of the 1576 epidemic on the indigenous population, a pestilence that swept away many of Sahagún's creative team at the very height of their labors. Thus, by 1577, at the finale of his monumental project, time, skilled labor, and access to color pigments had run out.⁷⁵ The painters of Book 6, like those of the last folios of Book 11, and almost the entirety of Book 12, were forced to rely exclusively on grisaille, shades of gray and black. It is also true that without specific indigenous models, the painters might have struggled to pictorialize the more conceptual orations of Book 6 and, in their haste to meet an impending deadline, added more decorative "fillers" and grotesques.

The *tlacuiloque*, here as elsewhere, drew their inspiration from a range of sources and repurposed them in in-

FIGURE 11.6. *Prayer to Tezcatlipoca. Florentine Codex, Bk. 6, fol. 1r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.*

ventive new ways. I focus on several of the unconventional and clearly bipartisan artistic solutions that are evident in the first seven chapters that contain the prayers to Tezcatlipoca, Lord of the Smoking Mirror and supreme deity.⁷⁶ Each of the orations invokes a litany of names for Tezcatlipoca, beginning with “Our Lord of the near, of the night [Tloque Nahuaque], the great Lord, invisible as the night, impalpable as the wind.”⁷⁷ His appellation as the Night Wind (Yohualli Ehecatl; ioale, Ehecatle) emphasizes his invisibility and omniscience. The very act of enunciating his titles and names “conferred a power,” according to Guilhem Olivier, and activated the presence of the divinity (*teotl*).⁷⁸

In four puzzling images of Tezcatlipoca that accompany the prayers (figs. 11.6, 11.7, and 11.8 depict three of these images), a disembodied head representing the numen floats in a nocturnal sky above a desolate landscape. A single devotee, clearly indigenous (barefoot and wearing a loincloth in figure 11.6) stands below the zoomorphic head. All of the devotees also assume the native posture of humility described in Nahuatl as one that required a bowed head and “arms folded” across the chest. This latter submissive gesture is included in an admonition of father to son to avoid pride and vanity before the omniscient deity: “Just conduct thyself; especially be thy head bowed, *thy arms folded*” (emphasis mine).⁷⁹ Examined more closely, the floating heads have an extended proboscis, a serpent’s tongue that is sometimes bifurcated, and feather-like extensions, reminiscent of the dragons and griffins that populate medieval books.⁸⁰ These images

clearly depart from the renderings of Tezcatlipoca as a male figure with his identifiable emblems. Instead, the composite reptilian heads respond to the god’s title as the wind, *Ehecatl*, who in the Nahuatl lexicon had a buccal mask or duckbill extension.

Although still reliant on indigenous precedents, the strange airborne heads are composites in that they refer visually to more than one Aztec deity. The addition of feathers, a serpent’s tongue, as well as a symbol for preciousness (a concentric ring) surmounting the disembodied head in figure 11.7 evokes Quetzalcoatl (Feathered Serpent) rather than Tezcatlipoca. As Olivier has shown, Tezcatlipoca and Quetzalcoatl were often paired, both deities associated with the Night Wind, sorcery, and creation myths.⁸¹ The composition of Tezcatlipoca as a free-floating head above a standing supplicant also replicates images that feature calendrical signs, both pre- and post-contact; among these, for example, are images of Quetzalcoatl in the Florentine Codex that feature the day sign “one wind” hovering above the deity (fig. 11.9). Although the images in Book 6 have resonance with the “ancient paintings” to which Sahagún and his team had access, they are selectively filtered from the precontact sign system, then fragmented and reassembled. But for all the degrees of separation, this visual transposition reveals that artists strategically, if artificially, gestured to their Nahuatl heritage, promoting a more indigenous way of telling, of showing.

Despite their resemblance to Aztec iconographic conventions, the fragmented depictions of Tezcatlipoca that I have been analyzing may also reflect the increasing pressure to relinquish traditional belief systems and instead to align Nahuatl beliefs with Christian conceptions of a more disembodied, abstract God.⁸² Euro-Christian illustrations were also pilfered as pictorial sources, with a concomitant migration of meaning.⁸³ Two coupled images juxtapose depictions of Tezcatlipoca as the Night Wind with scenes that recall Christian narratives. In one of the paired images of Tezcatlipoca just examined, an additional scene is appended below featuring nine kneeling devotees (see fig. 11.7). Only a single line separates the two compartments, as opposed to the double line that frames the entire composite image, indicating that the dual images should be read as one. In the bottom register, a cluster of kneeling figures peers skyward—most with hands clasped together in the Christian gesture of prayer—but two individuals adopt the more indigenous pose, with “arms folded” across

FIGURE 11.7. *Prayer to Tezcatlipoca.*

their chests, as does the single devotee above them. The composition of the worshippers mirrors any number of vignettes of the Ascension of Christ, the Assumption of the Virgin Mary, or the descent of the Holy Spirit (Pentecost), with a faithful throng below gazing heavenward.⁸⁴ While both European and Nahua viewers likely would have made this familiar visual association, the handiwork of the Nahua artist dignifies a pre-Christian prayer to a non-Christian deity by transposing it into a Christian colonial context.

A second juxtaposed image sets up a similar “oscillation of elements that display antagonisms and complementarities,” to borrow Serge Gruzinski’s words,⁸⁵ that is, a composite image that includes a priest hearing confession above the scene of Tezcatlipoca with his native devo-

tee (see fig. 11.8). Nahuas declared their lapses to Tezcatlipoca, as nothing was hidden from him: the god could “see into men’s hearts.”⁸⁶ The Aztec practice of confession called for an annual ritual when a penitent would verbalize his transgressions to the deity’s priest, as the kneeling couple is doing in figure 11.10. In spite of the European figural proportions and the Christian posture of kneeling in this image, the painter records rather faithfully the ritual accoutrements of the priest (or the god’s surrogate) and his smoking pipe, flowers, and flute during Tezcatlipoca’s primary ceremony of *Toxcatl*.⁸⁷ Once an Aztec confessed, the priest meted out punishments, including drawing blood (autosacrifice), making offerings, sweeping, or fasting—all thought to have been purification rituals.⁸⁸ Catholic and Nahua moral codes were similar; dissolute

FIGURE 11.8. Confession (top) and prayer to Tezcatlipoca (bottom). Florentine Codex, Bk. 6, fol. 21v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

behavior that was considered punishable included adultery, drunkenness, lying, or sloth, infractions that could result in physical illness. Concepts of morality and sin, however, diverged dramatically, as Louise Burkhart has shown.⁸⁹ Those who broke Aztec proscriptions were wayward, aimless persons, or were described as dirty or having a rotten stench. To be dishonored or defiled was to live in “dust, garbage” (*in teuhltli tlaçulli*).⁹⁰ Nahuas were admon-

ished for bad conduct, but not because it showed disobedience to God or had consequences for the salvation of one’s soul. Instead, their disorderly actions endangered the community’s welfare and undermined the cosmic order.

In figure 11.8, however, the painter has modeled the confession scene from Book 6 after imported images of exorcism from Northern Europe and merged them with traditional Aztec practices. In the upper half of the image,

FIGURE 11.9. Quetzalcoatl (Feathered Serpent), with day sign One Wind. Florentine Codex, Bk. 4, fol. 59r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

the indigenous priest is elevated on a high-backed reed seat and extends his clay *incensario* with burning copal. The priest faces a kneeling penitent who disgorges his sins in a venomous stream of snake, toad, and scorpion. Similar vermin depict sins in a Valadés engraving of the sacrament of confession and penitence, where they spew forth from the mouths of natives in the upper tiers of a multi-layered composition, between the devil in the uppermost register and the punitive fires of hell below (fig. 11.11).⁹¹ As the ultimate manifestation of evil, serpents writhe in Satan’s Medusa-like hair and emerge from his mouth. According to medieval iconography, these reptilian creatures are graphic embodiments of vices such as avarice, lust, and demonic forces. Although notoriously ephemeral, similar prints of confessional scenes must have circulated in the Americas, as a copperplate engraving from the Andean region (ca. 1612–1620) depicts an Inka lord kneeling before a seated Jesuit priest, flanked by an angel and the devil, both anxious to claim the confessant’s soul. As the na-

FIGURE 11.10. Tezcatlipoca hearing confession. Florentine Codex, Bk. 3, fol. 8v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

tive acknowledges his sins verbally, a snake emerges from his mouth; other snakes, lizards, spiders, and frogs crawl around below him.⁹²

These are the vices enumerated by Valadés as the seven cardinal sins introduced by the devil; he summarizes them by stating that the devil places “evil thoughts in the heart, false words in the mouth and also wicked actions in our limbs.”⁹³ In his explication of the engraving, Valadés points to the worship of the devil, shown in the upper tier as the recipient of obeisance and offerings, as the most “heinous cause of all evil.” He then links the Indian to this type of devil worship (presumably idolatry) and the “arts of black magic,” among which words themselves are singled out, impugned as harmful, insolent, and blasphemous.⁹⁴ The Manichean struggle between good and evil is clearly cast as a war between satanic and angelic forces, as fluttering angels seek to assist the native penitents.

The confessional image in Book 6 (see fig. 11.8) featuring a “sinful” indigenous male is particularly poignant as the Florentine’s production coincided with the 1576 plague, one of the most devastating in Mexico’s history. At the outset of the Florentine Codex, Sahagún self-identifies as

FIGURE 11.11. *Sacrament of confession. Detail of engraving from Diego Valadés, Rhetorica christiana, fol. 216. Getty Research Institute, Los Angeles (2860-179).*

one of the “physicians of the souls” (*médicos de las animas*) who makes a diagnosis by studying his patient in order to root out his “illnesses,” such as idolatry and drunkenness.⁹⁵ The figurative parallel between the medical doctor and the recognition of sins is instructive. Amara Solari has traced the conflation of the “rhetoric of disease” and idolatry, broadly defined, to long-standing medieval practices that censored the unchristian behavior practiced by Jewish, Muslim, and Amerindian peoples.⁹⁶ When assessing the shortcomings of the mendicant program, Sahagún explicitly links sickness to the Indians’ weaknesses, licentiousness, and “evil works,” which were so “odious to God” as “to [even] cause them great sicknesses.”⁹⁷ Disease, in other words, strikes humans in retribution for their sins. With

their lack of immunity, the indigenous population was the most vulnerable and, by implication, the most culpable.

But is it possible that the Florentine Codex artist of the confession scene in Book 6 is not capitulating wholesale to a Euro-Christian interpretation? One intriguing pre-conquest parallel for the penitent’s disgorging of reptiles in figure 11.8 occurred during the Aztec ceremony of *Atamalqualiztli* (Eating of the Water Tamales), when priests engaged in the ritual act of eating snakes and frogs. Held every eight years, *Atamalqualiztli* was celebrated to give thanks for the earth’s bounty; the *maçateca*, or priests, who ate and swallowed live frogs and snakes (“they just chewed them up”) were rewarded with gifts, and all participants danced in costume and feasted on tamales.⁹⁸ In a detail from the image describing *Atamalqualiztli* in Sahagún’s *Primeros memoriales* (fig. 11.12), the three priests, whose blackened bodies mark them as sacred, are positioned diagonally from lower left to upper right toward a pond, each with a snake emerging from his mouth. This festi-

FIGURE 11.12. *Feast of Atamalqualiztli.* Lower left to upper right: three blackened priests eating snakes. *Primeros memoriales*, fol. 254r (detail). *Códice Matritense del Palacio Real de Madrid*. © Patrimonio Nacional, España.

val honored Tlaloc (Earth Lord), the storm and vegetation deity, and these aquatic creatures, in particular the serpents, did not symbolize evil but embodied fertility and regeneration. Might a Nahua viewer have read the Florentine Codex image of confession in figure 11.8 not as abhorrent or as a rebuke, but with a more equivocal response? In other words, there may be visual homology here, but dissonance of reception.

RHETORIC AS ACCULTURATION

The phrase “rhetoric as acculturation,” derived from Thomas Habinek’s work on the role of classical rhetoric in educating the young males of ancient Greece and Rome, suggests a useful paradigm because of the author’s emphasis on rhetoric as “social practice” and acculturation as “social replication.”⁹⁹ Through the memorization of traditional orations by students moving from childhood into adulthood, they were initiated into the larger corporate culture,

a process Habinek describes as cross-cultural and transformational in the Roman Empire. “Because this transformation often entailed a permanent migration from one culture to another (e.g., Egyptian to Greek, Spanish or Gallic to Roman), and because it encompassed attitudes, practices and beliefs, indeed the student’s very sense of self, it is helpful to regard rhetorical training not just as acquisition of knowledge, but more generally as a process of acculturation.”¹⁰⁰ There are instructive parallels in how the teaching of rhetoric in Aztec Mexico, and subsequently in sixteenth-century monastic schools, ingrained a respect for traditional social, political, and moral values to create a shared sense of community. And in the polyglot, multiethnic environments of both the pre- and the postcontact periods, the need for a lingua franca and a cohesive cultural foundation was essential in promoting civic order and governance. However, as powerful an ideological tool as oratory could be, Habinek also recognizes that traditions could constitute the raw material out of which a new social order was fashioned; in other words, the very traditions inculcated via rhetorical strategies were being constantly reevaluated and adapted. Rather than characterizing Sahagún’s Nahua authors and painters as being transformed, or as “migrating” from one culture to another, the Florentine Codex demonstrates their creativity in amalgamating the visual and textual languages available to them.

The ways in which rhetoric could be appropriated for divergent purposes and discrete audiences is demonstrated in the textual discrepancy of the Nahua metaphor in Book 6 for good discourse: “as the light, the torch, the sign, the measure, the wide mirror” (in tlavilli, in ocotl, in machiotl, in octacatl, in coiaoac tezcatl). In the accompanying image, the pine torch and circular black (obsidian) mirror are centered between the “speaking” male adult in the woven-reed seat on the left and his attentive audience of younger boys on the right.¹⁰¹ For the Nahua, the sage words of their forefathers and leaders were illuminating models and reflective exempla: “From it [the good discourse] you are to take yourself a model, to take an example, in order to live well or in order to speak well.” The Spanish text however, redirects the audience from their elders to the new Catholic intermediaries: to hearken to the wisdom of the preacher’s sermon (“el sermón que el predicador predica”).¹⁰²

While Book 6 contains some of the most uniquely Nahua ways of expressing and transmitting knowledge found in Sahagún’s masterful project, paradoxically its

images and the Spanish interpolations betray the entanglements of a multiethnic authorship and the larger colonizing agenda. In a two-way acculturative process, rhetoric played an essential role in promulgating a different moral and social order and, indeed, in creating a “world anew.”¹⁰³

NOTES

1. Oration was the major form of rhetoric in sixteenth-century Europe. See Abbott 1996, 6–15.

2. The Latin dedication includes the phrase, “Hic sextus omnium maior, cum corpore tum vi: grandi tripudio”; translated in León-Portilla 2002a, 223.

3. Sahagún 1950–1982, introductory vol., prologue to Bk. 9, 71.

4. Perhaps inspired by Andrés de Olmos, Sahagún’s fellow Franciscan and linguist who early on (1533–1539) recorded at least twenty-nine Nahuatl speeches. His *Arte y vocabulario de la lengua nahuatl*, recorded in 1547 but not published until 1600–1601 by Viseo, includes seventeen *huehuetlatolli*. On Olmos, see León-Portilla and Silva Galeana 1991, 7–45; Ruiz Bañuls 2009, 48–51, 113–116, 126–127.

5. On the difficulties in translating Book 6, see Roa-de-la-Carrera 2010b, 70–87.

6. On the evolution of the pictographic tradition in postconquest central Mexico, see Boone 2008, 253–286.

7. On a discussion of Nahuatl songs and European poetry, see Lockhart 1992, 393–398.

8. Peterson 1988, 273–293.

9. That Aztec-style iconography was available to imitate is alluded to in the Florentine; a reference to “ancient paintings” occurs in Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 48; and author’s account or “Relación,” Bk. 10, 82. On the self-representation of the *tlacuilo*, see Peterson 2003, 223–253. On the bicultural sources for the Florentine Codex, see Escalante Gonzalbo 2003, 167–191; and Boone 2003, 137–166.

10. On the young Sahagún at the University of Salamanca in the 1520s, see Terraciano, introduction to this volume; and Peterson, chapter 1 of this volume.

11. On the glut of book publishing, see Kagan 1974, 35.

12. In addition to writing the first Spanish *gramática*, Nebrija also published a handbook on rhetoric (*Artis rhetoricae compendiosa*) in 1515. See Abbott 1996, 8; Ríos Castaño 2014, 41–42.

13. Hernando Alonso de Herrera was such a student, becoming a professor of rhetoric at the University of Alcalá de Henares, then at the University of Salamanca in 1513. See Morocho Gayo 2000, 186–187.

14. Kagan 1974, 162, 231–232. On Sahagún as a humanist aware of cultural relativism, see Browne 2000, 75, 81, 85; León-Portilla 2002a, 43.

15. Valadés 1989, image between pp. 16–18 (79–83). Hereafter, page numbers from the Latin facsimile in the *Rhetorica christiana* precede the Palomera Spanish translation of the Valadés, shown in parentheses.

16. On the Florentine Codex’s production, see Bustamante García 1990; León-Portilla 2002a; and Terraciano, introduction to this volume.

17. The schematic ordering of things, also apparent in the diagrams of the *Rhetórica* of Valadés, drew from widely circulating sources, such as those of Ramon Llull (1232–1315). See Báez Rubí 2005.

18. See table I.1 in the introduction to this volume.

19. Volumes by Cicero and Quintilian were inventoried in the Tlatelolco library on July 31, 1572. On the Tlatelolco collection, see Mathes 1985, 30; and Peterson, chapter 1 of this volume.

20. Isidore of Seville’s compendium of ancient and Arabic learning was printed in ten editions from 1470 to 1520. On rhetoric, see Isidore (2006, thirty-one chapters in Bk. 2); and six volumes in Pliny (Carey 2003).

21. Isidore 2006, Bk. 2, chap. 1, 69.

22. Habinek 2005, 90.

23. Sahagún 1950–1982, introductory vol., prologue to Bk. 6, 65. Pliny underscores “the sharing of a common language” in order “to bestow civilization on mankind” (*Historia naturalis*, 3:39; as quoted in Carey 2003, 35).

24. Valadés 1989, preface, 27–29.

25. Vives 1971, 181. *De tradendis disciplinis* of Juan Luis Vives (1531) includes a chapter on rhetoric that relies on Aristotle, Pliny, Cicero, and Quintilian. The goals cited by Vives echo those of the classical handbooks on rhetoric, “to teach, to move, to persuade,” as in Habinek 2005, 47.

26. Luis de Granada (1504–1588) was the first to develop and adapt “evangelical rhetoric” for the non-Christians of the New World; see Abbott 1996, 9–17; also Habinek 2005, 88–90.

27. Sahagún 1979, Bk. 6, fols. 128v, 204.

28. Molina 1977, pt. 2, 141, 157; Karttunen 1992, 267; Lockhart 1992, 406, 412. Librado Silva Galeana uses the literal translation, “la antigua palabra,” rather than underscoring the transmitters of the word (Silva Galeana 2002, 117). Thelma Sullivan amplifies *huehuetlatolli* to incorporate both “sayings of the ancients” and “of the elders”; see Sullivan 1974, 80–84; León-Portilla (2002a, 175) uses the phrase “testimonies of the ancient word.” For a good review of the definitions and parameters of the *huehuetlatolli*, see Ruiz Bañuls 2009, 62–67.

29. In Sahagún 1979, Bk. 6, fol. 93v; Sahagún 1950–1982, Bk. 6, 113, 215. However, it is used elsewhere in the Florentine, as in *ueuetlatolli* that occurs in a merchant-elder’s speech admonishing returning merchants to lead austere, humble lives (see Sahagún 1950–1982, Bk. 9, 42); also in Sullivan 1974, 92–94.

30. “[V]uncan mijtoa: in tlatolli in vel injollo intech quijcaia”; in Sahagún 1979, Bk. 6, fols. 1, 4v, 8v, 12.

31. On Nahuatl beliefs regarding the heart (*yollotl*), see López Austin 1988, 1:190–191, 2:212–223. When conjoined with *toltecayotl* (artisans), the multivalent heart fuses the mastering of crafts, including painting, with intellect, passion, and dexterity. See León-Portilla 1980; 1990, 166–176; Peterson, forthcoming.

32. Houston, Stuart, and Taube 2006, 153–163, 227–251. Sound and speech scrolls appear very early in Mesoamerican civilizations.

33. Sahagún 1950–1982, Bk. 6, 63, 83, 99. Molina 1977, 93–93v, 141, 140v. *Tecpillatolli* is also written *texpillatolli*; and *tecuitlatolli* as *teucitlatolli*.

34. Whereas lack of training was reflected in poor speech; Sahagún 1979, Bk. 10, fol. 11v.

35. As shown in Sahagún 1979, Bk. 11, fol. 241v. The right, indeed necessity, of forceful speech is also reflected in the Maya term for lord, or *ajaw* (Houston, Stuart, and Taube 2006, 153).

36. On this composite royal icon and the significance of speech scrolls in defining rulership, see Hajovsky 2015, 1–11, 38–39, 58–78.

37. Sahagún 1950–1982, Bk. 6, 63, 246; Sahagún 1979, fol. 203v; see also Bk. 6, 99: “the spirit, the words of the lord [in *ihijotzin*, in *itlatoltzin*].” On the “bodily exhalations,” or breath-soul, see Houston, Stuart, and Taube 2006, 142–143.

38. Sahagún 1950–1982, Bk. 6, 47–48.

39. Anywhere from sixty-one to around one hundred of the orations have been attributed to Sahagún alone, dispersed throughout the Florentine Codex and beyond. Díaz Cántora (1995, 5–15) identifies only seven *huehuetlatolli* in Book 6 of the Florentine Codex (chaps. 17–22, 40) based on parental or intergenerational orations; Ruiz Bañuls (2009, 62–67) counts thirty-nine ancient speeches in Book 6. Sullivan analyzes

eighty-nine *huehuetlatolli* and classifies them according to genre (Sullivan 1974, 86–98, 100–107, tables 9–14). See also García Quintana 1976, 61–71.

40. Sullivan 1974, 86–94, 100–102.

41. In his treatise, Aristotle identifies epideictic speech as one of three types of rhetoric; see Aristotle 2007, 7, 15–16. On European and Nahuatl rhetoric, see Abbott 1996, 32–37.

42. What Abbott (1996, 30) calls the “rhetoric of behavior” that ensured social stability.

43. Sahagún 1950–1982, Bk. 6, 122; Sahagún 1979, Bk. 6, fols. 100–101.

44. Sahagún 1950–1982, app. to Bk. 3, 65. While the text on the instruction of songs in the *calmecac* is in Book 3 (Sahagún 1979, Bk. 3, fol. 39), the image is in Book 2, fol. 128 (see fig. 11.3).

45. John Bierhorst (2009, 25–30) translated and transcribed thirty-six Nahuatl song texts (*netotliliztli*), describing them not only as highly ritualistic but also as having a coercive and militant power.

46. Alonso de Zorita observes that Andrés de Olmos, or his informants, relied on pictorial sources for the collecting of the Nahuatl orations: “y los sacaron de sus pinturas que son como escritura e se entienden muy bien por ellas”; see Zorita 1992, 100–101. See also León-Portilla 1991, 12–13; Silva Galeana 2002, 118–119.

47. Sullivan 1974, 99. Lockhart (1993, 9) similarly claims that there were no indigenous pictorial records for these “elaborate set speeches.”

48. Sahagún 1950–1982, Bk. 6, 91, 99.

49. Roa-de-la-Carrera 2010b.

50. As described in the ideal monastic atrium, in Valadés 1989, 108(473), 219(493), 221(501), and 222(503).

51. Baudot (1982, 125–145) and Ruiz Bañuls (2009, 159–211) deconstruct the *huehuetlatolli* for their Christian adaptation and application.

52. Sahagún 1979, Bk. 6, fol. 80v; see also Ríos Castaño 2014, 91n77.

53. As evident in Sahagún’s *Psalmody christiana* (circulating by 1564 but published in 1583), where he is still concerned that the indigenous converts are backsliding; that “they use other canticles to persuade the population to do what they want, or about war or other matters that are not good” (Sahagún 1993a, prologue, 7). The provincial Church councils in Mexico City (1555, 1585) ordered the “cleansing” of indigenous texts for superstitious or heathen subject matter.

54. Sahagún 1950–1982, introductory vol., prologue to Bk. 10, 81.

55. Sahagún 1979, Bk. 3, fols. 11–12, Bk. 6, chap. 43, fol. 210v; Sahagún 1950–1982, Bk. 6, 254. See also Olivier (chapter 7 of this volume) on the use of “diablo.”

56. “[I]n tlatoltetl, in tlatolquavtl”; Sahagún 1950–1982, Bk. 6, 63.

57. Sahagún 1997, 229–245; Sahagún 1993b, fols. 61v–64v. This court oration (para. 15 in the section on rulership) is followed by an Aztec ruler’s shorter discourse.

58. Sahagún 1997, 241: “chalchiuitl, yn iuhq’ yeuxiuitl, in xictic yn olloluihqui in teuilacachiuhqui.”

59. Sahagún 1950–1982, Bk. 6, 79–81, 113–114.

60. On finger-pointing as a pre-Hispanic gesture, see Olko 2014a, 167–175.

61. On the potency of words, see Ruiz Bañuls 2009, 96–97. The topic is discussed as well in chapters 3 (Terraciano), 10 (Magaloni Kerpel), and 12 (Sousa) of this volume.

62. Sahagún 1950–1982, Bk. 6, 248.

63. Sahagún 1950–1982, Bk. 6, 248; Sahagún 1979, Bk. 6, fol. 205v.

64. Sahagún 1950–1982, Bk. 6, 252, 99.

65. On concentric rings as affixes for preciousness or value on speech scrolls, see Sahagún 1979, Bk. 2, fols. 104v, 143v; Bk. 5, fol. 1; Bk. 10, fol.

47; Bk. 11, fol. 55v. Kevin Terraciano (chapter 3 of this volume) elaborates on the feather affix.

66. Boone 2016, 38–39.

67. Sahagún 1979, Bk. 11, fol. 55.

68. Sahagún 1979, Bk. 10, fol. 45.

69. See Boone 2016, 35–37.

70. Sahagún 1979, prologue to Bk. 6, unpaginated; Sahagún 1950–1982, Bk. 6, 65.

71. Kevin Terraciano (personal communication).

72. “Fue traduzido en lengua española por el dicho padre Fray bernardino de sahagun: depues de treynta años, que se escriujo en la lengua mexicana: este año de mjjll y qujnientos y setēta y siete” (Sahagún 1979, Bk. 6, fol. 215v).

73. Speech scrolls were not even added to the first sixteen images of Book 6 (until folio 53).

74. Magaloni Kerpel 2011b, 72–73; Dackerman 2003, 11–15. Susan Dackerman also argues that the stated preference for Dürer’s black-and-white graphics by Erasmus was primarily to establish printmaking as an independent medium.

75. Magaloni Kerpel 2011b, 50–51; Baird, chapter 13 of this volume.

76. Although Tezcatlipoca was a shape-shifting supernatural, as several of his names indicate, in most colonial representations, the deity, or his priestly representative (*teixiptla*), is rendered as human. See Olivier 2003, 44, 247–249, 252.

77. Sullivan 1994, 127.

78. Olivier 2003, 13.

79. “[C]an ximonemjti, cenca ic in motolol, in momalcoch.” Sahagún 1979, Bk. 6, fol. 92v; Sahagún 1950–1982, Bk. 6, 111.

80. Dragon-like grotesque ornaments are found in several volumes in the Tlatelolco library, including a 1543 edition of the *Vita Christi Cartuxano* by Ludolph of Saxony (Ludolfo de Sajonia).

81. Olivier 2003, 22–24.

82. My thanks to Lisa Sousa for this observation.

83. Escalante Gonzalbo 2003; and chapter 4 of this volume.

84. Peterson 2017.

85. Gruzinski (2002, 145; see also 31, 128–130) differentiates this blending of elements as *mestizo* or *mélange* in the postconquest Americas distinct from hybridization, the mixtures that occur both within and between cultures over time.

86. Olivier 2003, 24–25. The Spanish text uses words such as “sinner” (*pecador*) and “penitent” (*penitente*): Sahagún 1979, Bk. 6, fol. 21v.

87. Tezcatlipoca’s representative (*teixiptla*) during Toxcatl carried with him his flute, flowers, and smoking tube: Sahagún 1950–1982, Bk. 2, 68.

88. The entire Aztec confessional rite is contained in Sahagún 1950–1982, Bk. 6, 29–34. The Nahuatl word *neyolmelahualiztli* (literally “straightening one’s heart”) was an approximation of “confession” borrowed by the mendicants, but the Nahuatl idea was to be truthful or honest. On this see Burkhart 1989, 82; Lara 2008, 98–116.

89. The Nahuatl word is *tlatlacolli* when used to convey “sin”; it meant something that was damaged or broken and is related to *tlazolli*, or filth, disorder. See Burkhart 1989, 87–129.

90. Sahagún 1950–1982, Bk. 6, 209, 215; see also p. 32: “in excrement, in filth” (in *cuitlatitlan*, in *tlācuiltitlan*).

91. In Valadés 1989, between the Latin texts on pp. 215–218. For the description of this image by Valadés, see 218(491).

92. Cummins 2011, 222–223.

93. Valadés cites as sins *gula* (gluttony), *lujuria* (lust), *pereza* (sloth), *inedia* (evidia[?]: envy), *avaricia* (avarice), *ira* (anger), and *soberbia* (pride); Valadés 1989, 216(487).

94. Valadés 1989, 218(491).

95. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 45.

96. Amara Solari (2016, 485) concludes that “idolatry and disease comprised a mutually informing conceptual space.”

97. Sahagún 1979, prologue to Bk. 10, unpaginated; Sahagún 1950–1982, introductory vol., Bk. 10, 75; and see Baird, chapter 13 of this volume. On the differences between the Nahua and the Christian link between disease and morality versus sin, see Burkhart 1989, 170–183.

98. On Atamalqualiztli, see Sahagún 1997, 67–69; 1993b, fol. 254r; 1950–1982, Bk. 2, 177–178. These parallels are also noted by Solari (2016, 495–496). For a full image of Atamalqualiztli, see figure 5.2 in this volume, p. 83.

99. Habinek 2005, 60–78.

100. Habinek 2005, 61.

101. Sahagún 1950–1982, Bk. 6, 246–247. This metaphor is used elsewhere in Bk. 6, as on p. 107; Sahagún 1979, Bk. 6, fol. 204.

102. The full Spanish text: “Esta letra quiere decir: lumbre y hacha encendida y dechado y modelo y espejo ancho. Por metáfora quiere decir, Rasonamiento que los principales hablan a los macehuales: y el sermón que el predicador predica y el buen ejemplo de Buena vida que alguno da.” Sahagún 1979, Bk. 6, fol. 204.

Flowers and Speech in Discourses on Deviance in Book 10

LISA SOUSA

In Book 10 of the Florentine Codex, a Nahua author described the procuress's ability to lure clients using speeches, incantations, and spells: "She is a charmer [lip-flower], a smooth-talker [mouth-flower], a sweet-talker [mouth-flower-sweet-water]; she is of pleasing, agreeable speech. She is soft-spoken. Her words are flowers, sweet, pleasing. She is an artful, skilled speaker, a master of discourse."¹ The Nahua writer drew upon two symbols of seduction—speech and flowers—to convey the procuress's ability to tempt others and to promote illicit sex.² The Nahuatl warning is just one of three distinct commentaries on the subject of how a procuress leads people astray. The accompanying Spanish translation and the illustration can be considered separate texts that express related concepts and concerns, but that vary significantly in their presentation of the procuress.³ Similarities and discrepancies in the descriptions and images of procurers, prostitutes, thieves, and murderers, among other social deviants, shed light on the Nahua-Christian dialogue on immorality in the sixteenth century. A close reading of these selected texts against one another also elucidates the active role of Nahuas in the conceptualization of Book 10 and the intended bicultural audience of the manuscript.

Previous scholarship has revealed the complex process in which indigenous concepts of morality informed local Christian beliefs in New Spain. Research based on the study of native-language Church texts has shown how the friars' reliance on native languages to evangelize promoted the incorporation of indigenous moral concepts

into Christianity, giving rise to unique regional forms of Catholicism.⁴ Pioneering studies of images, material objects, and colonial texts have considered moral attitudes related to the body and gender ambiguity.⁵ Several works have examined European influences on some of the images and texts in Book 10 concerning prostitutes, the intersexual, and the homosexual.⁶ This chapter contributes to the scholarship on morality, gender, and sexuality by analyzing a range of texts and images in the Florentine Codex, and especially Book 10, to shed light on Nahua symbols of moral transgression and to reveal the persistence of these concepts in Nahua verbal and visual expression after the conquest.

In this chapter I examine how discourses on deviance feature speech and flowers as metaphors for illicit sexuality and for immorality, more generally. These symbols appear in both the Nahuatl texts and the images of social deviants in Book 10 but are obscured or eliminated in the Spanish translation. The images betray significant European influence, reflecting the bivisual world of sixteenth-century Mexico, while retaining an underlying coherence in Nahua ideology.⁷ In some cases, Nahua artists attempted to innovate Mesoamerican writing conventions by including phonetic elements that went beyond expressing place-names and personal names. A comparison of the Nahuatl texts, Spanish translations, and images reveals how multiple understandings of immorality operated in the early colonial period and how writers and artists employed a variety of strategies to convey moral danger.

BOOK 10

Book 10 of the Florentine Codex covers several inter-related themes, including kinship, age, and occupations; parts of the human body; illnesses and medicines; and brief descriptions of some of the ethnic groups that inhabited New Spain.⁸ Nahuas wrote the first draft of the Nahuatl text between 1558 and 1565, based on interviews with elders and nobles in Tepepulco and Tlatelolco, when Sahagún's educated and Christianized Nahua coauthors asked them to describe different social groups and the traits associated with them. The text was later expanded with additional information from Tenochtitlan and revised in subsequent editions as Sahagún and the Nahua scholars made corrections.⁹ Sahagún reorganized the material into books and chapters and added the Spanish translation, likely between 1575 and 1577; the images were painted last.¹⁰ Book 10 of the latest version of the manuscript, known today as the Florentine Codex, describes roughly 204 categories of people based on age, kinship, status, and occupation. In the first twenty chapters, each with multiple entries, the text provides the characteristics and qualities of a good person and a bad person in each category.¹¹ From the beginning, there was some redefinition of pre-Hispanic social types to fit a Christian moral framework. The imposition of good/bad distinctions, following European concepts of virtues and vices, or good and evil, reveals Christian influence in the organization of the book. At the same time, the division of the material into chapters on men and women of differing status and occupations follows Nahua social conventions and Mesoamerican conceptualizations of society, the natural world, and cosmology in terms of complementary pairs, suggesting that Nahua scholars influenced the structure of the book and its chapters.¹² This framework also corresponds to Spanish distinctions based on gender and status.

Of the more than two hundred categories, there are sixteen social types that did not elicit positive associations and apparently were considered social deviants, at least in the context of the emerging Nahua-Christian morality of mid-sixteenth-century New Spain (see table 12.1). These classifications include groups who committed or promoted sexual transgressions or those who defied gender boundaries. Others who were defined in strictly negative terms were associated with violence, robbery, and trickery. By examining the texts and images of all social deviants as a corpus, rather than focusing strictly on one type or another, central tropes of Nahua moral ideology emerge.

In creating the list of social types for the interviews, Sahagún and the Nahua scholars must have discussed which kinds of people would be identified as deviants, and they must have determined the labels to assign to these groups. However, some categories that include positive and negative evaluations reveal slippage between indigenous and Christian ideologies, suggesting that Nahua authors played a significant role in determining the categories and deciding which groups would be described in both positive and negative terms.¹³ For example, the description of the *nahualli* (shape-shifting ritual specialist), which the friars associated with the devil, includes good and bad types. While Catholic priests were quick to condemn the *nahualli*, whom they believed engaged in the dark arts as a "bruxo" (witch, sorcerer), Nahuas continued to admire (and fear) such figures' power.¹⁴ Similarly, there were good and bad *tlapouhque* (calendar readers, prognosticators). In his prologue to Book 4, on divination, Sahagún denounced the calendar readers, for, in his opinion, "[t]his trick of reckoning is either a necromantic craft or a pact and invention of the devil, which should be uprooted with all diligence."¹⁵ Given Sahagún's support for the elimination of traditional rituals that used the calendar, it is clear that the Nahua writers decided to include the positive description, not Sahagún. Nahua authors also ascribed positive traits to the *tlauetzqui* (storyteller), although Sahagún overlooked this when he placed the storyteller description in the chapter that dealt with "the vicious people."¹⁶

While the characterization of certain criminals, such as thieves and murderers, in strictly negative terms seems fairly straightforward, for other groups it is less obvious. Nahuas seem to have had more nuanced views of transgender men and women, homosexuals, and ambiguously gendered individuals than the Florentine suggests, and these groups had roles in certain ritual contexts that are not acknowledged in the texts or images of Book 10.¹⁷ Book 10 also distorts the importance of the *ahuiani*, "one who indulges in pleasure," by portraying her as a "prostitute" and failing to acknowledge her part in spiritual life as a temple dancer or a caretaker of deity impersonators.

The perspectives of the project's participants and the timing of the collection of materials in part explain Book 10's biases. Sahagún's coauthors were Christianized men who had been raised and educated in the Church. From the time of the conquest, and especially after the arrival of the first Franciscans in 1524, all indigenous people

TABLE 12.1. *Social Types with No Redeeming Qualities*

NAHUATL TERM	TRANSLATION OF NAHUATL TO ENGLISH	SPANISH TRANSLATION OF NAHUATL	TRANSLATION OF SPANISH TO ENGLISH
Tl catecolotl	Owl person	El hombre que tiene pacto con el demonio	The man who has a pact with the devil
Iolpoliuhqui	Person with a destroyed heart	El hombre perdido	The vicious man
Telpuchtlaelilloc	Wicked youth	El moço desparatado	The terrible youth
Ueuetlaelilloc	Wicked old man	El viejo putaño	The old whoremaster
Tetlanochiliani	Procurer/procuress	El alcaguete	The procurer
Xochihua/suchia	Possessor of flowers	El enbaucador / la enbaucadora	The deceiver (masc./fem.)
Cuiloni	Homosexual ("one who receives")	El sodomético	The sodomite
Iautl	Enemy	El homiciano	The murderer
Necoc iautl	Enemy everywhere	El traydor	The traitor
Ichtequi	Thief	El ladró[n]	The thief
Temacpalitoti	One who enchants	El ladrón que encantava para hurtar	The thief who enchants in order to rob
Teichtacamicti	Assaulter who kills	El salteador	The assaulter
Ahuiani	One who indulges in pleasure	La puta	The whore
Tetzauhcióatl	Scandalous woman	La adultera	The adulteress
Patlache	Intersexual (Molina: "lesbian")	La muger que tiene dos sexos	The woman who has two sexes
Tetlanochili	Procurer/Procuress	La alcagueta	The procuress

Sources: Sahagún 1996, Bk. 10; Molina 1992.

came under increasing pressure to accept Christian marriage and sexual morality. In addition, in the 1530s and 1540s the friars waged an intense campaign to extirpate idolatries and eliminate polygyny.¹⁸ Sahagún himself and other Franciscans served as interpreters in these apostolic inquisition trials, which often targeted nobles for crimes against the faith. Memories of the persecution of nobles who had challenged Christian doctrine must have been fresh in the minds of many Nahuas when Sahagún undertook his ambitious project of information gathering. Those nobles who agreed to participate in the project might have been more open to the evangelizing mission of the friars, or they might have offered responses that they believed did not challenge Christian teachings, for fear of reprisal. The Christianized Nahua authors of the Florentine might have omitted any positive comments that participants offered about certain social types, such as the *ahuiani*, that they believed would have been controversial.

Sahagún also might have eliminated any information that he considered offensive when he compiled drafts of the manuscript.

These perspectives and editorial practices have distorted to some extent the indigenous discourse on deviance in Book 10, especially in terms of gender ambiguity and sexuality. Nevertheless, Nahuas continued to draw upon traditional metaphors and beliefs to describe and depict the nefarious behavior of the groups described solely in terms of their deviance.

SPEECH AND FLOWERS IN THE NAHUATL TEXT

One of the hallmarks of Mesoamerican culture groups was their development of elaborate and eloquent speech and song genres used, for example, in rituals and healing. Mesoamericans invested speaking with considerable

political and social power, and the Nahua ruler, or *tla-toani*, was “one who speaks.” Mesoamerican nobles distinguished themselves from commoners by speaking a reverential, metaphorical language that conveyed their high status and refinement.¹⁹ Elders and nobles gave moralizing speeches at life-cycle rituals and other public events to instill a strong ethical code among their families and communities. Numerous examples of the speech of elders, the *huehuetlahtolli*, collected in Book 6 emphasize moderation, humility, responsibility to others, sexual fidelity, and respect for elders as principal virtues in Nahua culture.²⁰

Colonial sources reveal that, in addition to formal rhetoric, Nahuas possessed a highly developed genre of speech related to intimacy and courtship. In some texts the act of speaking represented sexual intercourse. In a moralizing speech in Book 6, a Nahua father cautioned his son that indulging in sex as a young man would destroy his virility later in life, warning that the time would come “when you are no longer able to say anything, no longer able to do anything to your spouse.”²¹ In another example, Nahuas described the wicked youth (*telpuchtlaeliloc*) as a womanizer and a smooth talker: “he has mistresses, he is a talker; he lives with concubines.”²² The placement of the statement “he is a talker” between the phrases “he has mistresses” and “he lives with concubines” conflates his talking with sex.

Book 10 discusses how men or women could change their identities by adopting speech patterns of the opposite gender. The text explains, “[T]he *xochihua* [possessor of flowers] has feminine speech, has a feminine way of talking, [and if a woman] has masculine speech, has a masculine way of talking.”²³ (Of the more than two hundred categories, this is the only one that addresses both men and women in the same entry, and the only place in which a description of a certain type of woman appears in the section on men.) The Nahua writer reiterates a link between speech and sexuality when he describes the passive homosexual (*cuiloni*) as one who “speaks like a woman, he pretends to be a woman.”²⁴ The parallel phrase “he speaks like a woman, he pretends to be a woman” suggests that his mode of speech is used to deceive others. If we read the reference to speaking as a metaphor for sex, the construction further suggests that he takes the part of the woman in sex. Nahua authors used a similar format in the description of the *patlache* (intersexual). The *patlache* befriends lots of women and “speaks like a man, goes about as a man.”²⁵ Because the text states that the *patlache* has

a penis, the paired phrase that he/she “speaks like a man, goes about like a man” may be a play on words that intimate that he/she “has sex like a man.”²⁶

Nahuatl descriptions of the procurer and the procuress (*tetlanochiliani*, *tetlanochili*,) emphasize their abilities to deliver arousing discourses. According to the Nahua authors of Book 10, it was principally through speech that the procurer led clients astray: “The procurer is a mouse, a charmer, a windbag, an enticer, a possessor of flowers, one who seduces people with flowery words, one who flatters people with pleasing words, one who poisons people. He entices, he poisons people; he stretches out long-winded speeches; he summons people with spells, he lays ambushes for people.”²⁷ The tempting speeches of the *tetlanochili* stand in stark contrast to the *huehuetlahtolli*. Whereas the edifying counsel of the elders set people on the right path, the procurer’s words corrupted and destroyed unsuspecting people. The *tetlanochili* lured, enticed, and poisoned his victims with flattery and cunning. Similarly, the Nahuatl description of the procuress associates her command of provocative speech with her ability to encourage moral breaches:

She is a charmer, a sweet-talker, a smooth-talker; she is of pleasing, agreeable speech, soft-spoken. Her words are flowers, sweet, pleasing. She is an artful, skilled speaker, a master of discourse. She is one who flatters, tricks and induces people with pleasing words; she is one who entices, entrances, and lulls people with incantations. She is a cajoler, one who summons people with spells, one who destroys people with sorcery, one who places obstacles so that others will stumble. She stretches out long-winded speeches; she converses deceitfully; she tricks people with pleasing words; she lulls one with words. She perverts, provokes, confuses, corrupts people; she fools people; she induces people, she induces people with spells; she lulls people with incantations; she entrances people.²⁸

The text concerning the procuress uses twenty-two terms to convey her skills at entrapping and confusing others with her incessant talking. She made eloquent speeches, but she also knew the forbidden words of incantations and spells. The repetition in the text emphasizes the seductive nature of speech and the power that procurers and procuresses wielded through their command of language.

The descriptions of the murderer, the traitor, and the

thief who uses incantations further reveal Nahua concerns over deceptive words. The murderer “brings false testimony against people; he accuses people; he hates people; he slanders, lies, and makes up stories about people.”²⁹ Not only did the murderer commit acts of violence, he destroyed his victims with falsehoods. Similarly, the traitor posed a threat to social and political stability by creating animosities and stirring up trouble. “He comes between people, he stirs people up, he agitates people. His lies make people bow their heads. He spits in people’s mouths. Words are his food. He incites rebellion, he causes riots, he stirs things up.”³⁰ Whereas the procurer and procuress aroused sexual passions that threatened the moral order, the traitor provoked controversies that led to chaos and challenged the political order. The thief who uses incantations (*temacpalitoti*) knew spells and songs, two other powerful verbal genres: “he possesses words, he possesses songs. He is one who robs people by enchanting them to put them to sleep, one who enchants in order to deceive people, he is a thief.”³¹ The descriptions of both the thief and the procuress use the terms *tecochtlaçani* (one who enchants in order to put people to sleep to rob them) and *tecochteca* (one who enchants to deceive people); whereas procurers and procuresses caused moral lapses, the thief who uses incantations caused a mental lapse, making people lose consciousness with his spells. Thus descriptions of deviants reveal a complex of immorality that includes concepts of the corrupting use of spoken word, song, and incantations to promote illicit sex, violence, and social discord.

Many of the entries in Book 10 also express moral concerns using flowers as symbols of temptation, seduction, and sexual excess. In Mesoamerican ideology, flowers conveyed a broad range of concepts and meanings, from potency, fertility, and (re)production to destructive aspects of illicit sexuality.³² Nahuatl expressions recorded in the Florentine Codex suggest the negative connotations of flowers, as for example, in the Nahuatl phrase “I caress one with flowers” (*nictexochitzotzona*), meaning, “I seduce him/her.”³³ Similarly, the expression “I destroy one with flowers” (*nitexochipoloo*) meant, “to entice one with drink, with food, with flowers, with tobacco, with capes, with gold.”³⁴ In both cases, flowers represent temptation and forbidden pleasures. The term *xochihua*, based upon *xochitl*, or “flower,” in fray Alonso de Molina’s Nahuatl dictionary, means “to enchant, to seduce the woman with pleasing words in order to take her to another place, or

to bewitch her.”³⁵ Nahuas associated sexual diseases with certain flowers, including the white amaryllis and the poinsettia, revealing their perception of flowers as potentially harmful.³⁶

Nahua contributors to the section on the procurer employed three terms based on *xochitl*, describing him as a “possessor of flowers, one who seduces people with flowery words, one who flatters people with flowery words.”³⁷ Similarly, the procuress’s “words are flowers,”³⁸ and the prostitute “appears like a flower.”³⁹ Flowers convey sexual transgression in the Nahuatl term *xochihua* (literally “possessor of flowers”) used in Book 10 for a transgender person and for a procurer.⁴⁰

Nahua writers also drew upon traditional concepts in their discussions of immorality in Book 10 by attributing malicious behavior to indigenous supernaturals. The murderer was “a *tzitzimitl*, a *coleletli*,” terrifying beings who descended from the sky to torment people. A single reference to the Christian devil in the description of the procuress shows how Nahuas also began to associate immorality with the devil’s corrupting influences. Even then, however, the devil appears only as one of several malevolent deities: “The procuress, one who procures: The procuress is truly a *tlacatecolotl*, [the *tlacatecolotl*] truly lives within her, truly hides within her. She is truly the *nahualli* of the *tzitzimitl*, the *coleletli*. The deceiver is truly the eyes, the ears, the messenger of the devil, the *tzitzimitl*.”⁴¹ As though writing for an indigenous audience, the writer sensed a need to elaborate on the European devil by defining him as a type of Nahua malevolent deity. In doing so, however, the threat seems to come more from ancient supernaturals, including *tlacatecolotl*, *nahualli*, *tzitzimitl*, and *coleletli*, than from the devil.

The critical statements concerning homosexuals (*cui-loni*), and the conclusion that they deserved to be burned, reveal some of the strongest evidence of Christian influence in Book 10.⁴² Friars denounced homosexuality as the nefarious sin in sermons and confessionals.⁴³ And on occasion, Spanish officials in New Spain burned homosexuals at the stake in the public spectacle of an *auto-de-fé*.⁴⁴ By contrast, sources on indigenous justice do not refer to the execution of homosexuals, and there is no evidence that burning was a form of punishment for social deviance in preconquest times. Therefore, it seems likely that the Nahua authors adopted this view from their Spanish mentors. It is not clear whether this strong condemnation of homosexuality was intended to reassure Spanish

readers of the text, to provide language that friars could use in their sermons on sexual morality, or to serve as a didactic statement to Nahua readers.

SPANISH TRANSLATIONS

Some Nahua social categories did not fit European conceptual frameworks, and one encounters the same difficulty in translating these terms into English. Table 12.1 shows the discrepancy between Nahuatl and Spanish categories and sheds light on some of the difficulties of evaluating, discussing, and translating moral concepts and ideology. For example, *ahuiani*, “one who indulges in pleasure,” was a term for a woman who lived and danced in the temple in preconquest times. The friars adopted this term for the Spanish “puta,” or whore, clearly demoting a woman who participated in sacred rituals to a prostitute who sold her body. In his refutation of idolatry, Sahagún also used the term *ahuiani* when he denounced Nahua “goddesses of filth,” or deities of sexuality, especially Tlaçolteotl, “who is like the goddess Venus,” denigrating them as nothing more than “harlots” and demanding that Nahuas cease worshipping them.⁴⁵ “Prostitute” in English perpetuates a distorted meaning of the original term, while expressing the intent of the colonial text. Similarly, the Nahua authors assigned the label *xochihua*, or “possessor of flowers,” to men and women described as transgender individuals, although in the description of the procurer this term is used more generally for a person who promotes or engages in illicit sex. It is not entirely clear whether *xochihua* was an actual social category, or whether transgender men and women were simply considered members of the gender with which they identified (i.e., a biologically sexed male who adopted the speech, work, and dress of a woman or became a woman).⁴⁶ Sahagún translates *xochihua* as *enbaucador* or *enbaucadora*, “deceiver,” which fails to represent the metaphorical meaning of *xochihua* or to convey gender fluidity. The term *patlache* also poses certain difficulties. The description of the *patlache* refers to a person who has the attributes of an intersexual individual and has sex with women. Sahagún translates the term as a “woman who has two sexes” (“mujer que tiene dos sexos”). Although according to the description, the *patlache* had a penis and performed some aspects of gender as a male, both in terms of speech and dress, Sahagún assigned the label “woman” and put this entry in the section on women, trying to force a person who was biologically and socially complex into a

binary gender framework.⁴⁷ Molina provides the term *patlachuia*, “for a woman to have sex with another woman,” suggesting the term lesbian.⁴⁸ Because of a lack of corroborating sources that use many of these terms, it is difficult to discern precisely what type of person the Nahua authors had in mind in their descriptions.

In some sections, Sahagún did not reproduce much of the rich Nahuatl vocabulary that drove home the point of the text. For example, whereas the Nahua author used more than twenty terms to describe the procuress’s ability to lead others astray with her enticing words, Sahagún summarizes her command of speech in a single statement: “[She is] very rhetorical in her speech; using delightful words in order to deceive, she goes about offering women like roses, and in this way she brings [them] with her sweet words to stupefied and entranced men.”⁴⁹ The twenty-two lines of Nahuatl that describe the procuress are reduced to twelve lines of Spanish. Similarly, the Spanish text downplays the power of the procurer to bring harm; there is no mention of his ability to “poison” or “ambush” people. Whereas the translation does allude to the procurer’s ability to seduce women, Sahagún streamlined the more elaborate Nahuatl description, stating succinctly, “[H]e deceives women with beautiful speech.”⁵⁰ The four Nahuatl terms that refer to flowers (*tensuchitl*, *suchioa*, *tensuchiuiani*, *tetensuchitzotzonani*) in the description of the procurer’s speech are summarized as “[the procurer uses] deceits and falsehoods . . . that are like roses that please men with their beauty and good scent.”⁵¹ The translation fails to tap into the metaphorical power of speech and flowers as tropes for seduction and illicit sexuality. Sahagún also renders the Nahuatl term for flower (*xochitl*) as “rose” when he states that “the prostitute appears like a rose.”⁵² For a Spanish reader, references to roses might have evoked the practice of love magic and the belief that those who had been rejected could attract lovers by casting spells on roses.⁵³

At times, Sahagún introduced concepts that would have resonated with a Spanish audience but that are not included in the Nahuatl text. For example, in the description of the prostitute, the Nahua writer discusses how the *ahuiani* had the custom of wandering around and chewing chicle to freshen her breath. In Sahagún’s translation of this section he adds that “when they chew, their teeth sound like castanets.”⁵⁴ He repeats this in the description of the chicle chewer: “the public women, without any shame whatsoever, walk around chewing chicle

in all places, in the streets, in the markets, clacking their teeth like castanets.”⁵⁵ His commentary seems to express greater concern with manners than with morality. Sahagún’s translation of the text on the *tlacatecoltl* (owl person) provides another example of his attempt to explain indigenous concepts to a Spanish reader by adding details that are not in the Nahuatl. Sahagún defined the *tlacatecoltl* as “the man who has a pact with the demon,” although Nahua authors do not mention the devil.⁵⁶ This example also demonstrates how the Spanish translation obfuscates Nahua beliefs, shoehorning this complex concept of a ritual specialist who had the ability to cast spells on others and to shape-shift into a Christian framework. Finally, Sahagún omitted references to the *tzitzimil* and *coletli* from his translations, which Nahua authors used to characterize the procuress and the murderer.

Sahagún did not feel the need to comment on morality in these sections of the manuscript, even though this would have been an ideal place to do so. He reserved his commentary for the prologue to the book, where he lamented the decline in Nahua morality due to increasing drunkenness among the native population and the collapse of institutions that reinforced traditional hierarchies and enforced discipline.⁵⁷ Thus, although he often summarized the Nahuatl, Sahagún did not veer entirely away from the original text, except in a very few places. While Nahuas might have expressed their discourses on deviance using their own concepts and language, in this final version of the manuscript, at least, they did not directly challenge Christian morality in any way that would have required Sahagún’s intervention.

THE IMAGES

The images that accompany social types in Book 10 reflect the negotiation of Christian and indigenous worldviews in sixteenth-century Mexico. The depictions are more like illustrations from a European book than Nahua pictorial writings in that they are entirely removed from the rich context of Mesoamerican codices.⁵⁸ Some of the images show individuals who float in open space, and others are confined to bordered spaces. Nevertheless, they retain many familiar symbols and conventions of the postclassical writing system. All of the illustrations of social deviants correspond to the Nahuatl text, and some of them introduce distinct information and concepts. Several of the depictions include phonetic glyphs and markers that

conveyed specific words or syllables. As a corpus, the iconography of deviance in Book 10 further highlights speech and flowers as moral signifiers, but the images also rely on other fundamental concepts, including the distinction between center and periphery, to convey ethical and criminal violations.

Nahua *tlacuiloque* of the Florentine Codex placed social interaction in specific settings to differentiate between appropriate and inappropriate behaviors and positive and negative influences. To convey the proper moral and social order, Florentine Codex artists depicted parents, nobles, or elders making speeches in the household or temple complex. They rendered hierarchy and harmony through seating arrangements of adults and children, elders and youth, men and women, nobles and commoners. In Nahua society, the household was a moral unit, and members of a household socialized and raised children together.⁵⁹ The adults of the household monitored each other’s behavior to ensure that moral transgressions would not threaten the stability and health of the family. The image of a Nahua ruler making a speech to his sons (top frame) and to his daughters (lower frame) is set in the patio of a *tecpan* (palace), indicated by the circular disc motif at the top of the image, an architectural detail of central Mexican palaces (see fig. 11.1, p. 168).⁶⁰ The noble father sits on a reed-mat throne, which conveys his authority as *tlatoani*, and his children are gathered on the floor at his feet, looking obediently at him and listening attentively to his counsel. The artist emphasized the importance of the father’s oration by drawing a prominent speech scroll in front of his mouth (also a standard glyph to identify him as the *tlatoani*) and by showing him gesturing with his hand.⁶¹

On the other hand, Nahua artists of Book 10 depicted all sixteen scenes of deviant behavior in a generic countryside setting, far from the watchful eyes of the community and household members. In locating certain activities outside of the community, Nahua *tlacuiloque* drew upon associations of the periphery with moral danger that were not directly expressed in the text.⁶² For example, a depiction of a prostitute and a client places their meeting in a rural setting (fig. 12.1). Peterson noted the prominence of the road in the image, which corresponds to the description of the prostitute as one who “wanders shamefully along the road.”⁶³ More specifically, the scene is placed at a crossroads (*otlamaxalli*, “crotch of the road”), a location associated with illicit sexuality, sorcery, and the underworld, as

FIGURE 12.1. *Prostitute with client. Florentine Codex, Bk. 10, fol. 70r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.*

well as with the *cihuateteo* (deified women who had died in childbirth).⁶⁴

In addition to depicting social deviants in the periphery, the artists showed them standing, suggesting that they were itinerant vagrants. There are a few exceptions: a man who propositions a prostitute sits on a little seat (emphasizing her deviance by showing her standing; see fig. 12.1), and the traitor is lying down (fig. 12.2). Victims of deviants, however, are often shown seated according to Mesoamerican pictorial conventions, which convey gender and moral order (see, for example, figs. 12.1 and 12.2).⁶⁵ Another fascinating exception to the standing position of deviants is the *xochihua* couple who sit facing one another in the traditional manner of a married couple (fig. 12.3, left frame). The “woman” wears the traditional hairstyle of an adult Nahuatl woman, and the hair of the “man” is cropped with bangs in the European fashion of the time. The artist used pictorial conventions of hairstyle, dress, and seating position to gender one of the figures as male and the other as female. If not for the text that indicates that one or both of the people is cross-gendered, it would be difficult to

distinguish, for there is no visual ambiguity. The harmonious image suggests that as long as a cross-gendered person fully adopted the roles, dress, and behavior associated with his or her chosen gender and formed a relationship with a person of complementary gender, then the couple would conform to a Nahuatl moral framework of acceptable, even desirable, behavior. The rendering of the *xochihua* couple using iconography that conveys morality reveals a discrepancy between the image and the alphabetic texts; whereas the image shows a harmonious couple, the written text concerning the *xochihua* focuses especially on female sexual deviance and, like the description of the *cui-loni* that immediately follows, seems to show significant European influence in the negative assessment of these types of individuals.

Although the images do not illustrate every detail discussed in the corresponding Nahuatl, many of the depictions of social deviants reinforce the fundamental importance of speech and flowers in Nahuatl moral discourse. In figure 12.1, the artist placed a speech scroll emerging from the mouth of the man, who propositions the pros-

FIGURE 12.3. Left: the suchioa (xochihua), “possessor of flowers”; right: punishment of the cuiloni, homosexual. Florentine Codex, Bk. 10, fol. 25v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

titute with pleasing words and money. Likewise, artists used speech scrolls to convey the idea that it is through the power of speech that delinquents confuse and deceive others. To emphasize the traitor’s duplicitous nature, the artist drew two strings of speech scrolls going in different directions and reaching separate groups of men to show that he speaks out of both sides of his mouth (see fig. 12.2). Even when the Nahua artist did not include speech scrolls, he indicated communication, negotiation, and speech by showing people making hand gestures and looking directly at one another. In the depiction of the wicked youth (*telpuchtlaueliloc*), a man stands between a woman and another man who holds a cup and a pitcher (fig. 12.4).

The man in the center points at the other man, as though facilitating their liaison, and both men look at the woman. In a very similar format, the illustration of the procurer shows him standing between a man and a woman, gesturing and looking at the woman (fig. 12.5, right frame), and the procuress stands between the devil and a woman, pointing her finger and looking at the woman (fig. 12.6).

In their studies of Florentine Codex images, Margaret Arvey and Jeanette Peterson have pointed out European influences in the depiction of prostitutes. Arvey identified the poses, hand gestures, and flowing hair as evidence that Nahua *tlacuiloque* drew from European models (fig. 12.7). Peterson also noted the harlot’s red shoes and golden goblet, which were symbols of dissolute women in European paintings and texts (see fig. 12.1). While I agree with these observations, I also consider how native artists invoked Nahua symbols and moral concepts to convey immorality and deviance in these and other images from Book 10. Several depictions of social deviants in Book 10 incorporate flowers to represent promiscuity. Arvey considered the abundant flowers in these illustrations as additional evidence of Christian influence. I argue, however, that as multivalent symbols, the flowers were used by the *tlacuiloque* to convey concerns with seduction, temptation, and illicit sex. The *tlacuiloque* might even have used flowers as phonetic indicators to suggest certain terms that contain the root of the word for “flower” (*xochitl*) that appear in the alphabetic text. Nahua artists show prostitutes hold-

FIGURE 12.5. Left: the ueuetlaueuililoc, wicked old man; right: the tetlanochiliani, procurer. Florentine Codex, Bk. 10, fol. 24v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

ing flowers as symbols of sexual impropriety (see fig. 12.7).⁶⁶ Although flowered clothing could be worn by indigenous men and women without any inherently negative connotations, in the Florentine it conveys seduction and sexual excess when worn by the *ahuiani* (see fig. 12.7, top frame) and the wicked old man (*ueuetlaueuililoc*) (see fig. 12.5, left frame).

Some illustrations use both speech scrolls and flowers to emphasize moral danger and sexual transgression.⁶⁷ The Nahua artist drew upon the traditional repertoire of gender markers when he depicted the intersexual wearing a married woman's hairstyle and a man's cape to convey gender ambiguity and bisexuality (fig. 12.8).⁶⁸ The elaborate speech scroll calls particular attention to the phrase in the Nahuatl text "she speaks like a man," and the figure is shown in conversation with a seated woman who has a

flower speech scroll emerging from her mouth. The image of a *xochihua*, or transgender person (or couple), shows two seated individuals with speech scrolls in front of their mouths, and a flower (*xochitl*) between them is a phonetic indicator that they are *xochihuaque* (possessors of flowers) (see fig. 12.3, left frame).⁶⁹

Some of the European influences in the Nahuatl text are also conveyed in the images. For example, an illustration showing the execution of a homosexual by burning corresponds to the statement that sanctions this punishment for same-sex relations (see fig. 12.3, right frame). The image might also have been intended to show a person burning in hell, and might have been influenced by European paintings and woodcuts showing such horrific scenes. The depiction of the devil in an illustration showing a procuress complements the description in the Nahuatl and Spanish texts of the procuress as "the eyes, the ears, the messenger of the devil, the *tzitzimitl*" (see fig. 12.6). However, whereas the original Nahuatl described the devil as one of many Nahua supernaturals, the illustration only shows the European devil, painted following European conventions as a goatlike creature with horns,

FIGURE 12.6. *The tetlanochili, procuress.* Florentine Codex, Bk. 10, fol. 41r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

clawed feet, and a tail. Perhaps by the time the image was produced, Nahuas were familiar enough with the European devil that he alone would do, or it might have been that the friars would not tolerate the depiction of other gods and powerful supernaturals in this context. Although the Nahua *tlacuilo* modeled the image on European examples, he posed the devil with his body facing one direction and his head turning the other way. According to Nahua pictorial conventions, this twisted position signified gender ambiguity, sexual excess, and immorality.⁷⁰ Thus the Nahua painter took the European image of the devil but reconfigured him in a way that conveyed Nahua moral ideology.

Several images suggest that the Florentine's artists

drew inspiration more from the Nahuatl text than from the Spanish translation. For example, when Sahagún defined the *tlacatecolotl* as a man who has made a pact with the devil, a detail that is not in the original Nahuatl text, the Nahua artist did not depict the devil; he depicted him as a *nahualli* instead, showing a man with the head of a beast (perhaps a dog) to convey his ability to transform into different animals, as discussed in the alphabetic text (fig. 12.9).⁷¹ The use of the Nahuatl text as the primary source of information for the images explains the somewhat puzzling illustration of the traitor, who lies on the ground between two groups of men (see fig. 12.2). The *tlacuilo* literally depicted the term “*moteca*” (he lies down), which appears in the string of phrases “among people, in the middle of people, he lies down,” meaning that “he comes between people.”⁷²

In addition to incorporating European images and styles, Nahua *tlacuiloque* of Book 10 innovated with pictorial writing, extending traditional techniques and sym-

FIGURE 12.7. *The ahuiani, prostitute.* Florentine Codex, Bk. 10, fol. 39v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

bols of postclassic Mesoamerican writing systems. The flower elements on clothing or bouquets held by figures who were prone to sexual excess express specific words and sounds in the pictorials of the Florentine Codex. The *tlacuilo* also depicted several of the nouns that describe the procurer, adapting the practice of writing calendrical and personal names, even placing them near the head of the figure. Specifically, a flower conveys that the procurer is “a possessor of flowers,” and the mouse expresses that “he is a mouse,” corresponding to statements in the Nahuatl text (see fig. 12.5, right frame).⁷³ There are elaborations on speech scrolls, as, for example, when the *tlacuilo*

cuilo adds wispy flourishes to the scroll in the depiction of the *patlache* and a flower on the scroll of the woman who converses with him/her (see fig. 12.8). The depiction of the murderer with a dog’s head reflects the Nahua belief that emotions are conveyed on the face and expresses the Nahuatl statement that “he is a dog at heart, a real dog” (fig. 12.10).⁷⁴ Illustrations of the *ahuiani* and the adulteress (*tetzauhcióatl*) show them holding a water (*atl*) glyph and standing on a stream of water. The *atl* glyph conveys the sound of the first syllable of *ahuiani* and of the term *auilli* used in the description of the adulteress. The significance of the stream of water is less clear. The

FIGURE 12.9. The tlacatecolotl, “owl person.” Florentine Codex, Bk. 10, fol. 21r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

water is reminiscent of a depiction in the Codex Borbonicus of the goddess Chalchiuhtlicue, a water deity, with a birth stream emerging from beneath her throne. Thus the Florentine’s image may represent the overt sexuality and fertility of the *ahuiani* or may refer to her wandering through Mexico City on the canals. Finally, the depiction of the adulteress (*tetzauhcióatl*) includes glyphs that conform more to the traditional writing system in that each element conveys the phonetic sound of one of the syllables of a word (fig. 12.11). On the left side of the image there appear a mouth, a spindle whorl, and a woman’s head.⁷⁵ Together the glyphs express the components of the word *tetzauhcióatl*: *te-* from *tentli*, “lips,” shown on the mouth; *tzaua-*, “spin,” indicated by a spindle whorl; and *cióatl*, “woman,” expressed by the head of a woman. The inclusion of glyphs in Book 10 images reveals the creative expression

FIGURE 12.10. The iautl, murderer. Florentine Codex, Bk. 10, fol. 25v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

of Nahua *tlacuiloque* who continued to find elements of their traditional writing system viable and useful, even as they incorporated European influences into their images.

CONCLUDING REMARKS

Nahuatl texts and images on social deviants reveal the persistence of a moral complex that shaped understandings of appropriate and inappropriate behavior. Speech and flowers were just two of the many symbols that constituted this expansive moral framework. While Christian beliefs began to seep into Nahua ideology, they did not replace traditional values, concepts, and attitudes entirely. A close reading of the Nahuatl texts, Spanish translations, and Nahua images reveals a rich intellectual and cultural exchange of ideas, concepts, and symbols in sixteenth-century Mexico.

In these sections of Book 10, Sahagún rather faithfully translated the Nahuatl, yet he omitted some of the symbolism in terms for seduction and immoral behavior, and he often eliminated the repetition of certain phrases in the Nahuatl text that emphasized dangerous behavior. It is paradoxical that Sahagún condensed the Nahuatl text, considering that his objective was to collect language and document beliefs that would help the friars uproot idolatry.⁷⁶ He seemed satisfied to collect Nahuatl language, but he did not feel the need to translate every term word for word. He surely understood that the repetition added emphasis to a point and reflected the speaker’s mastery of

FIGURE 12.11. *The tetzauhcioatl, adulteress.* Florentine Codex, Bk. 10, fol. 40r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

rhetorical speech and that this was lost in his more abbreviated translation. Sahagún might have rushed to complete his translation, and he might have felt that the repetition did not substantially change the meaning of the text. Given the mounting controversy surrounding the project by the 1570s, Sahagún might have also simplified or glossed over gender, social, and religious concepts that did not fit neatly into Spanish Christian morality.⁷⁷ Only rarely did he elaborate on the original Nahuatl text by adding descriptions that would make sense of foreign concepts to Spanish readers.

The reliance on problematic categories that were intended to conform to Christian morality misrepresented

or oversimplified certain aspects of Nahua gender, sexual, and religious ideology. The characterization of social deviants, for example, often relied on Nahuatl terms that did not possess inherently negative connotations in pre-conquest times or that did not fit neatly into the gender-binary framework of the book. Although Sahagún is often credited for the organization and content of the text, a close reading of the Nahuatl and Spanish sections against one another reveals the Nahua scholars' authorial voice.

The images negotiate between Spanish and Nahua worldviews, but they are more directly tied to the Nahuatl text. Nahua painters incorporated some European stylistic elements and techniques into their illustrations in Book 10. European books and paintings also surely served as models for some of the images (as shown, for example, by Escalante Gonzalbo in chapter 4 of this volume), but they were reconfigured with Nahua characters. However, the *tlacuiloque* also innovated with postclassic pictorial

and phonetic writing conventions to express Nahua moral concepts and language.

Perhaps what is most surprising is what is not discussed in the book of vices and virtues. There is only one mention of the devil in the Nahuatl commentaries on deviance, one illustration of the devil, and two references to him in Sahagún's translation. One might anticipate a much greater emphasis on the devil's pernicious influences, considering that Nahua authors and painters were living among Franciscans and that sermons, confessional manuals, and plays often blamed moral corruption on the devil. It is also surprising that there is not a single reference to sin (*tlatlacolli*) in the descriptions of social deviants in either the Nahuatl or the Spanish texts. And where are the polygynists? Polygynists were a primary target of early evangelization efforts, and yet they were not even mentioned as a particular type of moral deviant (although Sahagún does denounce polygyny in the Spanish interpolation that comes in between the sections in Book 10 on social and occupational categories and on parts of the body, as discussed by Baird in chapter 13 of this volume).⁷⁸

While European influence on the style and content of Book 10 is clear, underlying indigenous concepts and metaphors permeate Nahua verbal and visual expression in the Florentine Codex. Nahuas very selectively incorporated aspects of Christianity into their own views of ethical and unethical behavior. For colonial Nahuas, words continued to have great power to hurt and harm. Flowers, too.

NOTES

1. Sahagún 1979, Bk. 10, fol. 41. All translations from Nahuatl and Spanish are my own.

2. For an analysis of flowers and speech as metaphors that express Nahua sexual attitudes in formal texts and archival documents, see Sousa 2017, chapters 5 and 6.

3. Terraciano's careful study of Book 12 of the Florentine Codex reveals the discrepancies between the Nahuatl alphabetic text, the Spanish translation, and the images drawn by Nahua artists in accounts of the conquest of Mexico. He concludes that differences are significant enough to consider them three separate texts in one manuscript (Terraciano 2010). Ellen Baird also argues that "the choices of form and style with which the pictures were created, the prototypes used as models, and the context in which the pictures were created provide parallel texts which are often as important as the subject matter itself" (2003, 117). See also Edmonson 1974a, 7.

8. For a discussion of the methodology that Sahagún used to compile the information in Book 10, see López Austin 1974a, 141–144.

9. For an overview of the various manuscripts related to the Florentine Codex, see Munro 1974a, 1–15.

10. Dibble 1982a, 19–20; and see Terraciano, introduction to this volume.

11. Chapters 21–26 of Book 10 do not follow the same format of providing the qualities of a good and a bad example, suggesting that perhaps a different questionnaire was the source of information for this section.

12. Nahuatl texts and archival documents often organize references to men and to women or material pertaining to men and to women into distinct groups. Lists of men or material on men are usually discussed first. For example, last wills and testaments list the male testators first and the female testators second (see Cline and León-Portilla 1984). This convention is used to organize the coming-of-age speeches in Book 6 of the Florentine Codex, in which the father's speeches to the sons appear first, followed by the father's speeches to his daughter. The mother's speech to the daughter follows the father's speech; a mother's speech to her son is missing (Sahagún 1979, Bk. 6, fols. 70–106).

13. López Austin notes that the metaphorical terms and degrees of kinship that follow Nahua kinship systems indicate that Nahuas must have determined the kinship categories in Book 10 (1974a, 141).

14. See, for example, Olmos 1990, 40–41, 56–59.

37. Sahagún 1979, Bk. 10, fol. 25.

38. Sahagún 1979, Bk. 10, fol. 41.

39. Sahagún 1979, Bk. 10, fol. 40.

40. Sahagún 1979, Bk. 10, fol. 25.

41. Sahagún 1979, Bk. 10, fol. 40v.

42. I agree with Sigal (2007, 23–24) on this point.
43. See, for example, Córdova 1970.
44. See Trexler 1995.
45. Sahagún 1979, Bk. 1, fols. 37–37v. The Nahuatl in this section is not a direct translation of Sahagún's Latin and Spanish text. The reference to Venus is not included in the Nahuatl. Sahagún also makes an error when he refers to three sisters, instead of four (Tiacapan, Teicu, Tlaco, and Xocotzin), who were part of this complex. (Sahagún condemned the Nahua practice of giving these names to daughters.) Sigal (2007) discusses how Sahagún describes Tetzcatlipoca as a *puto*. Apparently, describing Nahua gods and goddesses as sexual deviants was part of the strategy to defame and denounce preconquest deities, and indigenous religious beliefs more generally.
46. For a related discussion of the challenges of determining gender in some Mesoamerican depictions and the ways in which scholars' assumptions have shaped gender attribution of deities, see Mandell's 2015 article on the "Great Goddess" in the Tepantitla mural at Teotihuacan.
47. The Nahua tendency to see male and female as complementary pairs might have also promoted this binary gender framework. The assignment of the *patlache* to the category of women seems to be based on affiliation, since according to the text the *patlache* befriended women.
48. Molina 1970, fol. 80 (Nahuatl-Spanish).
49. Sahagún 1979, Bk. 10, fols. 40v–41.
50. Sahagún 1979, Bk. 10, fol. 25.
51. Sahagún 1979, Bk. 10, fol. 25.
52. Sahagún 1979, Bk. 10, fol. 25.
53. This practice is discussed in an Inquisition document that is translated and published in Chuchiak 2012. Bristol and Restall (2009) also document the use of roses and other flowers in the love-magic rituals of Afro-Mexicans in colonial central Mexico and Yucatán. Interestingly, red roses were associated with the Virgin Mary in Spanish culture (Jeanette Peterson, personal communication, May 9, 2016).
54. Sahagún 1979, Bk. 10, fol. 39v.
55. Sahagún 1979, Bk. 10, fol. 65.
56. Sahagún 1979, Bk. 10, fol. 21.
57. For further discussion of Sahagún's despair over his belief that immorality was on the rise, see Baird, chapter 13 of this volume.
58. For another example of colonial depictions of immorality, see the Codex Mendoza, fol. 70r, which shows the punishment of thieves, adulterers, and drunkards (Berdan and Anawalt 1992). Like the Florentine Codex images, the depictions in the Mendoza are out of context and float in space on the page. For further analysis of the Mendoza images, see Sousa 2017, chapters 5 and 6.
59. See Sousa 2017, chapter 8.
60. Sahagún 1979, Bk. 6, fol. 70. Note that the artist incorporated European architectural features, including columns, arches, and tiled floors to convey the grandeur of the ruler's home.
61. For a discussion of the function of speech scrolls in pictorial writing, see Boone 2016.
62. Burkhart 1989, chapter 3. Many of the images of social types in Book 10 appear in the countryside, not only the images of social deviants. This may reflect influence of European models, or it may be the result of the pressure under which the artists worked to complete the manuscript. Nevertheless, the placement of deviant behavior outside of the community center or outside of a household setting corresponded to Nahua ideology and stands in contrast to depictions of ethical behavior in other books of the Florentine Codex.
63. Peterson 1988, 290.
64. Burkhart 1989, 63–64.
65. Nahua pictorial manuscripts show men seated with their knees drawn to the chest and women with their legs folded behind them.
66. Arvey 1988.
67. Sigal (2007) also notes some discrepancy between the Nahuatl text and the image of the *patlache*.
68. For a discussion of clothing as a metaphor for the body, see Sousa 2017, chapter 5.
69. The image may show a man dressed as a woman and a woman dressed as a man to indicate that each uses the speech convention of the opposite sex; however, the text does not refer explicitly to cross-dressing.
70. To convey disorder, Nahua painters would show the body in a twisted position, either seated or standing (Klein 2001, 206–211; and Sousa 2017, 114–116).
71. Note that the artist did not depict the *tlacatecolotl* (owl person) with an owl head. The head of the beast may also be meant to convey the man's inherent character and emotions.
72. Sahagún 1979, Bk. 10, fol. 25v. Note that accompanying the text concerning the *tlauelilloc tentzontli* (wicked man) there is a similar image in Book 10 on fol. 12 showing a man lying down between two seated men. All three have speech scrolls. The alphabetic text of this entry also uses the term *moteca*.
73. Sahagún 1979, Bk. 10, fols. 24v–25.
74. Sahagún 1979, Bk. 10, fol. 25v. For another example, see the depiction of the "mature woman," *quauhxicatl* (literally "eagle woman"), which has an eagle head on a woman's body (Sahagún 1979, Bk. 10, fols. 36–36v).
75. Arvey (1988, 187) suggested that the symbols of the spindle whorl and the woman's head referred to motherhood.
76. Given the complexity of the Nahuatl, it seems that only a very few highly trained friars could have ever used the Florentine Codex as a source unless they could consult an educated Nahua or Sahagún himself about the range of meanings of some of the terms.
77. See Terraciano's introduction to this volume for the historical context surrounding the project. On the oversimplification of gender concepts, see Overmyer-Velázquez 2005; Sigal 2007.
78. For a discussion of the friars' efforts to eliminate polygyny and the persecution of polygynists, see Sousa 2017, 50–63.

Parts of the Body

Order and Disorder

ELLEN T. BAIRD

Chapter 27, “Parts of the Body,” of Book 10 of the Florentine Codex (1575–1577) is an intriguing anomaly in that the two alphabetic texts are very different.¹ The Spanish text in the left column, “Relación del autor digna de ser notada” (Account of the author worthy of being noted), initially continues the theme of virtues and vices begun in the preceding chapters of Book 10, but from a postconquest perspective as fray Bernardino de Sahagún retrospectively and selectively addresses sixteenth-century Franciscan missionary history in Mexico. The Nahuatl text in the right column is an extensive (and important) lexicon of body parts and related words.² The pictorial text consists of six drawings of body parts placed in the left, Spanish column, usually above or below Spanish paragraph headings for body parts. The drawings, executed by indigenous artists, are placed close to or immediately adjacent to the Nahuatl word (in the right column) that names the part represented in the left column.³

Both alphabetic texts have been used extensively in scholarly work, as they provide significant historical and linguistic information. In sharp contrast, the six drawings in chapter 27 have been dismissed as “unimportant” and “poor and badly drawn.”⁴

This study analyzes the three texts (Spanish, Nahuatl, and pictorial) and their relationships to one another relative to the theme of the body considered from several new perspectives. These include the abstract lexical body, the corporeal indigenous body, conversion, social organization, and disease. Although the Spanish “Relación” is

clearly not a translation, summary, or commentary on the Nahuatl terms for body parts, the two texts are linked by the contrast and tension between the empirical, static list of Nahuatl words for the body in the right column and the often impassioned Spanish prose text to the left, which describes the dynamic, mutable situation of the indigenous body in the here and now: bodies afflicted by extreme punishments, drunkenness, disease, and altered by education. The body of Christ (the Church, although not explicitly mentioned) underlies much of the text, as does the body politic (*república*), both integral to the discussion. Although few in number and directly related to the Nahuatl text, several of the drawings play a significant role in augmenting and complementing the Spanish text and thus mediating between the two alphabetic texts. The drawings exist in the space between the two alphabetic texts, both literally and figuratively, and speak to the artists’ autonomous authority.

SAHAGÚN IN 1576

Fray Bernardino de Sahagún was clearly dispirited and pessimistic in 1576, as he dictated the “Relación del autor digna de ser notada” to his scribe in the scriptorium of the Franciscan Colegio de Santa Cruz in Tlatelolco.⁵ All was not well. Covert indigenous religious practices persisted, new policies of Church and state undermined the friars’ authority, and the return of a deadly disease decimated the indigenous population. The utopic Indian Church instituted by the “Apostolic Twelve” Franciscans was changing

rapidly as the first wave of missionaries died or returned to Spain and the number of Franciscan friars greatly diminished.⁶ Their influence further waned when the Crown issued the Real Patronazgo (1574), which diminished the Franciscans' authority by placing them (and all ecclesiastical matters) under the king's authority and favoring the secular clergy over the friars.⁷ There were also internal conflicts within the Franciscan order between those who stressed education in conversion, such as Archbishop Juan de Zumárraga, Sahagún, and his fellow friars at the Colegio de Santa Cruz, and those who stressed piety and mysticism, such as fray Toribio de Benavente (Motolinía) and other members of the Twelve.⁸ In 1572, Sahagún denounced Motolinía before the Mexican Inquisition for having dangerously confused two preconquest indigenous calendars: the 260-day divinatory calendar (the *tonalpohualli*) with the 365-day solar calendar.⁹ In the appendix to Book 4 of the Florentine Codex (and obliquely referring to Motolinía without naming him), Sahagún again condemned the confusion between the two calendars, describing the *tonalpohualli* "as very dangerous, superstitious and idolatrous."¹⁰ As testimony to the veracity of his account and the depth of his convictions, he appended his spidery signature (fig. 13.1), with its characteristic three crosses, the only place where his signature appears in the Florentine Codex.

By 1569, when Sahagún had completed the Nahuatl version of the twelve books that formed his *Historia*, the financial support for his work had been withdrawn and his scribes were dismissed.¹¹ Five years later, through the efforts of the newly appointed Franciscan general commissary, fray Rodrigo de Sequera, Sahagún regained possession of his manuscripts and was allocated funds to employ scribes and artists.¹² By 1575, Sahagún and his indigenous

collaborators were in residence at Tlatelolco completing the final version of the twelve-book manuscript with a Spanish text and paintings. A year later, a disastrous fourth epidemic of *cocoliztli* (a hemorrhagic fever endemic to Mexico) began, one of many diseases in sixteenth-century New Spain that decimated the vulnerable native population, malnourished, overworked, and weakened by previous waves of epidemic disease.¹³ During the first *cocoliztli* plague (1545), approximately 80 percent of the indigenous had died; Sahagún himself had been stricken and almost died after having "buried more than ten thousand bodies," according to his own account.¹⁴ The return of the disease in 1576 was catastrophic; roughly 50 percent of the remaining indigenous people died.¹⁵

The immediacy and the devastating effects of the 1576 *huey* (great) *cocoliztli* epidemic shape and inflect the "Relación" in Book 10. Multiple factors might have led to Sahagún's somewhat abrupt decision to abandon the intended Spanish translation of the Nahuatl body parts text in favor of an unrelated narrative.¹⁶ The primary reason, I suggest, was that he felt compelled to memorialize his evangelization mission in New Spain as he confronted what he perceived to be its imminent failure caused by the astronomical mortality rate of indigenous people (and consequent depopulation), which he discusses at length in chapter 27, and in an interpolated Spanish text in Book 11.¹⁷

THE TEXTS OF CHAPTER 27: PAGE ORGANIZATION AND GENERAL VISUAL ASPECTS

Chapter 27 begins with Spanish and Nahuatl chapter titles at the foot of folio 70r that continue to the top of folio 70v (see table 13.1 for chapter organization). They are very similar: The Spanish (translated) reads, "Chapter twenty-seven of all the external and internal members [of the body] of man as well as woman"; the Nahuatl says, "Chapter twenty-seven. It discusses the intestines and everything inside man, and all that is on the surface, [and] the joints, [and] what belongs to males and to women."¹⁸ The Nahuatl title is followed by the first paragraph heading for body parts (which treats the domain of the skin), "Inice parrapho . . .," followed below by a paragraph mark and the first word, "Eoatl" (skin) (fig. 13.2). The first drawing (fig. 13.3) follows the Spanish title in the left column. Immediately below the drawing are three heavily inked

84v–97r	Paragraphs 9 to 27	Left column blank	Right column text continues through paragraph 27

Sources: *Translations of Spanish are the author's. Translations of Nahuatl are from López Austin 1988, 2:77, 81, 85, 88, 91, 93, 98, 102.*

Greek crosses with a second Spanish title for the chapter written between the crosses: “+ Rela + cion del + autor” (first line), “+ digna + de ser no + tada” (second line). These words are in Sahagún’s distinctive hand, which signifies not only the Christian context but also that the subsequent text is his voice, although penned in the hand of the principal indigenous Spanish-text scribe, who was trilingual (in Spanish, Nahuatl, and Latin).¹⁹

Written in a slanted, cursive hand in sentence form with a variety of punctuation marks, the Spanish prose text flows down the left column from folio 70v to the end of folio 84r, periodically punctuated by seven vestigial headings. These are the Spanish paragraph headings that are parallel to the Nahuatl paragraph headings (all beginning with “Inic,” the Nahuatl for “By means of” or *Idem*).²⁰ Although both headings name the domain of the body part or parts to be treated in that section, the Spanish text bears no relation to the Nahuatl content. In addition, the Spanish “Relación” has its own internal set of paragraph marks that divide the text into three sections; the text continues above and below the Spanish vestigial, “ghost” paragraph headings as though they were invisible, ghostly reminders of the original intent to translate, summarize, or comment on the Nahuatl text.²¹ Clearly,

Sahagún decided to write his “Relación” after some of the Spanish body part paragraph headings had already been put in place. The multiple systems at work in the Spanish column are readily visible in the published facsimile and the online digitized manuscript.²²

In the parallel right column of chapter 27, the dispassionate list of Nahuatl terms for the parts of the body and their attributes stands in sharp visual contrast to the Spanish prose on the left (see fig. 13.2). The Nahuatl text is a list of words, each separated by commas, for the parts of the body followed by descriptive words related to each part. Heavily inked paragraph marks and bold capitalized initial letters mark the initiation of subparagraphs. The repetition of paragraph marks and capital letters at the left edge of the right column and the lists of words coupled with letters that are larger, usually printed separate from one another and more vertical than those in the Spanish text, give the appearance of greater regularity and create a visual staccato effect on the pages with many subsections. The stylistic difference in the parallel texts is quite striking and visually expresses the disjunction between the subject matter and tone of the two texts, as well as the hands of different scribes and the chronological disparity of the texts; while the Nahuatl text was completed in 1569 and

FIGURE 13.2. First page of chapter 27. Florentine Codex, Bk. 10, fol. 70v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

copied in 1575, the Spanish text was written and the drawings executed from 1576 to 1577.

The drawings are placed in the spaces left available above or below the paragraph headings, with the exception of the last drawing at the end of the text. The first drawing (by Artist 1; see figs. 13.2 and 13.3) occupies a much larger space than the other drawings, and its placement after the chapter title and the first paragraph heading and before the “Relación” title and three crosses suggests it was probably made before the alphabetic text. The subsequent images appear to be by a different artist (Artist 2) and to have been drawn after the text was written.

NAHUATL DOMAINS OF THE BODY AND THEIR PARTS

Sahagún’s first list of Nahuatl names for body parts appears in the *Primeros memoriales* manuscript (1558–1561). Without drawings, the two-paragraph lexicon organizes the body into two domains: first, the exterior parts of the body (fifty-one terms), and second, the interior parts (seventeen terms).²³ Some of the terms in both paragraphs are accompanied by words that tell the parts’ functions, purpose, or attributes.²⁴ Subsequently, Sahagún continued to collect words for the lexicon that ultimately comprised chapter 27 of Book 10. Fourteen paragraphs

FIGURE 13.3. *Dismembered body.* Florentine Codex, Bk. 10, fol. 70v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

(fols. 70r–97r) organize the body into fourteen domains, with over three hundred names of body parts and fluids with accompanying “adjectives attributed to these parts, the verbs related to them, adverbs in which the names form component parts, or ordinary expressions that derive semantically from them.”²⁵ López Austin suggests that Sahagún’s informants were encouraged to spontaneously associate words related to the named body parts in order to elicit as much information, words, and word forms related to the body parts as possible.²⁶ As organized by Sahagún and his indigenous collaborators, the body part domains follow a format that corresponds to their physical relationship to one another in the body. The list begins with the outer part of the body, the skin, followed by the visible parts of the body: the head; eyes and nose; face; teeth; lips and other parts of the face; neck (cervix); shoulder and the parts attached to it; torso; legs; and bones; and the interior parts of the body: organs within the body; very small organs; bodily excretions and secretions (excrement, perspiration, saliva, mucus, among others).²⁷

López Austin observes that

there are five things worth noting [about chapter 27]. First, the thirteenth paragraph included some body marks and defects. Second, there is a list of locatives that have parts of the human body as elements in their composition. Third, the testicles are not mentioned, and the names of kidneys take their place. Fourth, in the last part

of the chapter, there is an attempt to relate an organ to its function by means of paired-off sentences.²⁸

The Nahuatl text of chapter 27 is a taxonomical lexicon, an enumerative litany of body domains and their parts, ordered, abstract, and dispassionate.

INDIGENOUS BODIES: THE SPANISH TEXT AND THE DRAWINGS OF BODY PARTS

The Spanish text of chapter 27 begins with the chapter title (“Chapter twenty-seven of all the external and internal members [of the body] of man as well as woman”) and a large drawing of body parts by Artist 1, clearly reflecting the original plan for the Spanish text and image to parallel the Nahuatl text.

In the drawing (see fig. 13.3), a male torso is at the center of the scene, with the untethered parts of his dismembered body suspended above a gently rolling, green landscape. Unlike other nude torsos in the Florentine Codex, this image lacks the indications of human anatomy—ribs, nipples, pectoral muscles, and so forth—found elsewhere. The central part of this unique torso is defined by two vertical wavy lines, which are repeated in the upper stubs of arms, perhaps to reflect the wrinkled desiccation of the skin after death. The headless neck and the legless bottom of the torso are marked by vibrant red strokes that denote blood; the triangular space between the stumps of the two missing legs is notable for its lack of genitalia.²⁹ A left foot hovers above the groundscape on the left, followed above by a lower leg; a wrinkled knee (?); a shoulder; a profile view of a short, straight, black-haired male bob; a flat, masklike face (with eyes closed, indicating death); and a right hand seen from the back. Edged with strokes of red, the parts appear freshly severed and are similar to body parts found in scenes of sacrifice in the manuscript, although with less blood.³⁰ The parts float in space, disassembled and incomplete, the full complement of body parts missing (most notably genitals, thighs, and arms; bones are also absent).³¹ In the Florentine Codex, only one nude body (an infant) has male genitals (Bk. 4, fol. 19r).³² As public nudity was prohibited by both the Catholic Church and the Nahua, the depiction of male genitalia would have transgressed both Church and indigenous societal norms and morality.

“RELACIÓN DEL AUTOR DIGNA DE SER NOTADA”

As noted before, the primary Spanish title of chapter 27, “Relación del autor digna de ser notada,” is written in Sahagún’s own hand and marked with three heavily inked crosses. Catholic in context, the three crosses signal that the sign of the cross is to be made and the Trinity invoked (“In the name of the Father, the Son, and the Holy Spirit”) and recall Sahagún’s incorporation of three crosses in his signature (see fig. 13.1).³³ In sixteenth-century Mexico, “indigenous people were required to understand and make use of [the concept of the Trinity]: the everyday exercise of crossing oneself (*persignum crucis*), and the momentous occasion of opening one’s testament with an invocation of the Trinity.”³⁴ The prominent use of the sign of the cross coupled with his handwritten title of the “Relación” suggest that Sahagún was also invoking the Trinity to bless, authenticate, and mark the veracity of his testimony that follows.³⁵

Although the “Relación” is Sahagún’s history of evangelization, the images in the left, Spanish column continue to be directly linked to the body part terms in the adjacent Nahuatl text. Accordingly, they appear disconnected and visually disruptive to the Spanish “Relación” text in which Sahagún speaks of intact, living human bodies rather than the disarticulated parts of bodies in the six drawings. Analysis of the images in the context of the Spanish text, however, provides insight into Artist 2’s inventive development of a nuanced pictorial text that both responds to and augments the alphabetic texts and reveals his agency and authority. Embedded in the left, Spanish column, the disjointed body parts reinforce Sahagún’s narrative of societal disorder and fragmentation with the advent of epidemic disease and imminent death. I have located my discussion of each drawing at the juncture where it appears on the page relative to the Spanish text to emphasize this interrelationship. Although this creates a sense of disjuncture (for me at least), it often provides insight into the artist’s decisions about what to draw and how and why to draw it.

Sahagún constructs his narrative in terms of order and disorder, employing what Louise Burkhart defines as “the Mesoamerican dialectic of order and chaos, structure and anti-structure” that the friars used to express Christian concepts of good and evil. For example, “For sin they substituted *tlatlacolli* [something damaged]; . . . Thus native concepts were carried over into the most fundamental aspects of Christian moral teaching,” in essence Nahuatlizing what the friars were trying to say.³⁶

Paragraph 1: Folios 70v–79v

Sahagún begins paragraph 1 by describing an ordered pre-conquest, indigenous world of talented and capable Mexican people under the administration of an ancient republic that governed according to the needs of the people. He describes at length their aptitude for learning not only the mechanical and musical arts but also “the knowledge of [Latin] grammar, of logic, of rhetoric, of astrology, of theology. . . . There is no art they do not have the capacity to learn and practice.”³⁷

He also praises the ancient [Mexican] republic for governing

in conformity with natural and moral philosophy, because the mildness and abundance of this land and the climates [*constelaciones*] which prevail in it considerably aided human nature to be licentious and idle and much given to sensual vices. And moral philosophy taught these natives through experience that, to live morally and virtuously, rigor, austerity, and continuous concern for things beneficial to the state [*republica*] was [*sic*] necessary.³⁸

In doing so, Sahagún voices the prevailing Hippocratic “theory of ‘climate,’ or environment as it applies to politics,” that a people’s temperament was governed by climate and the stars and that a “Republic should be adapted to the natural aptitudes of its people.”³⁹

He praises the “prudent and wise old [indigenous] men” who employed constructive measures to counter the deleterious effects of the climate, but in contrast, “we [Spaniards] drift with our evil tendencies” (my emphasis),⁴⁰ and “if they are not very careful, become different [*se hazen otros*] a few years after reaching this land, and I think the climate or climates [*constelaciones*] of this land bring [the difference] about.”⁴¹

Principally concerned with implanting the Catholic faith, Sahagún criticizes the government put in place by the Spaniards as not appropriate to the temperament of the Mexican people and lacking the rigor and austerity necessary to maintain moral and physical health and thus introducing disorder. He notes that the Spanish concept of an ordered society (“*policia*”) had detrimental disordering effects on the indigenous people, as seen in the vices (and impediments to conversion) that resulted or continued: idolatry, drunkenness (which led to murder and abuse), deceit, polygyny, excessive sensuality, and lascivi-

ousness.⁴² Drunkenness was the principal cause for the evils and disorder of indigenous society, which included drunken feasts, murder, and abuse caused by inebriation, as well as “great dissension in the state [*republica*],” especially since “that olden rigor of punishing drunken feasts with the death sentence has ceased.” Neither lesser punishments nor sermons “nor the threats of hell [are] enough to restrain them.”⁴³

He extolls the virtues of the ancient republic even as he disparages its idolatrous nature:

And, if this manner of administration had not been so corrupted by idolatrous rites and superstitions, it seems to me it was very good. And, if cleansed of all idolatry which it possessed and made completely Christian, it were introduced in this Indian and Spanish state [*republica indiana y española*], it would be the means of freeing the one state as well as the other of great ills and the rulers of great hardships.⁴⁴

Idolatry and the unsuccessful missionary attempts to extirpate it become the dominant themes of disorder in the remainder of paragraph 1.⁴⁵ This theme echoes Sahagún’s statements in the first paragraph of his prologue to Book 1 of the Florentine Codex in which he links the “physicians of the souls,” the preachers and confessors, to “the curing of spiritual ailments.” He further notes in the prologue that “[t]he sins of idolatry, idolatrous rituals, idolatrous superstitions, auguries and abuses and idolatrous ceremonies are not yet completely lost.”⁴⁶ In the “Relación,” paragraph 1, Sahagún describes the need to destroy everything idolatrous (things, buildings, rites, and ceremonies associated with the state [*republica*] and governance)

and place [the Indians] in another kind of established order [*policia*] which in no way smacked of idolatry.

But now, seeing that this kind of established order [*policia*] produces very licentious people of very evil tendencies and very evil works which make them odious to God and to men, and *even* cause them great sicknesses and a short life, it will be necessary to remedy it.⁴⁷

Sahagún’s statement indicates that, broadly conceived, idolatry incorporates both evil tendencies and evil works and is directly related to causing “illness and a short life.”⁴⁸ As Amara Solari has noted, “the definition of idolatry was expanded to include all religious crimes. . . . The result was

the conceptual conflation of two of the defining characteristics of early colonial experience: epidemic disease and ongoing idolatries.”⁴⁹

Sahagún employs the “disease metaphor” of idolatry in noting that young married couples were separated from their parents and settled in separate villages where there were monastic establishments to “free them of the *infection of idolatry* and other evil practices that they could contract through association with their parents.” However, their evangelization was not successful, and this effort was again rewarded with deceit, “idolatry and drunkenness and many evil practices.”⁵⁰

Sahagún’s frequent references to the “state” (*republica*) reflect a concern for not only the development of an ordered society of individual bodies but also the establishment of a utopic Christian republic (the body politic).⁵¹ To this end, the friars emulated indigenous child-rearing practices in which children were reared “through the efforts of the state” (*potencia de la republica*) and not by their parents. However, the friars’ efforts to rear indigenous children apart from their parents were not successful and created disorder and evil practices; “they [the children] began to feel a strong sensuality and to practice lascivious things.”⁵²

In the monastery schools, the friars organized and led their students on expeditions to demolish pyramidentemples. The boys became more aggressive and banded together in groups of sixty to one hundred; with one or two friars, they “secretly fell upon those who held some affair . . . idolatry, orgy, or feast. And they seized all of them, bound them and led them to the monastery, where they punished them, [made them] do Christian penance, and taught them the Christian doctrine.”⁵³

The people were so fearful of the boys that, to avoid punishment, they continued their idolatrous practices in secret. However, “some of the boys, who were reared in our houses at the beginning, told us of the idolatrous things their parents did, having been baptized, and because we punished them therefore, their parents killed them and others punished [their boys] severely.”⁵⁴ The society he describes is not only one of individuals in disarray and disorder but a communal body that has turned on itself and torn itself apart.

The narrative is disrupted (disordered) by a drawing (fig. 13.4) followed by a “ghost” paragraph title, “Fifth paragraph of the teeth, and molars and eyeteeth,” that parallels the Nahuatl paragraph title. The two terms to the right of

FIGURE 13.4. Tooth. Florentine Codex, Bk. 10, fol. 77v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

the image are “tooth” (*tlantli*) and “molar” (*tlancochtli*). The setting (another rolling, green landscape, this time with tall grasses along the groundline) is similar to that in the first scene of the dismembered body. However, this and subsequent drawings are the work of a second artist, as the contours of the land are marked by black outlines rather than the prominent cross-hatching seen earlier. Here, three giant, eye-catching, stylized molars with thin gums rest on the low groundline. The molars are primarily white with areas of gray at the top to suggest cusps. The red band probably reflects the practice of using cochineal (prized for its intense red color) in tooth cleaning, as described in Book 10, chapter 28, folio 102v.

To the right, a man with short, wavy hair, dressed in a European-derived tunic with puffed sleeves, sits on a reed box. With his oversized right hand (which draws attention to his actions), he nonchalantly cleans his prominently displayed teeth with a small stick. The actions of this figure are drawn from a paragraph on tooth infections in Book 10, chapter 28, folio 102r, which is accompanied by a drawing of a seated man who holds his hand to his cheek, suggesting his discomfort. Three all-white molars with an attached water glyph float beside him and presumably signify washing the infected teeth with water, the text’s recommended preventative treatment. The alphabetic texts of this paragraph also describe other precautionary measures to avoid infected teeth and emphasize the importance of removing meat from the teeth. The Spanish text includes the additional instruction “to remove the meat . . . with a little stick” (*quitarse la carne . . . con un palito*), as the man in figure 13.4 is doing. The incorporation of these elements from chapter 28 into the drawing suggests that Artist 2

has chosen to cross-textually select relevant material from a subsequent chapter.

In Nahuatl pictorial manuscripts, glyphic teeth (*tlantli*, usually incisors) often serve as homonymous phonetic qualifiers to signify “below” (*tlani* or *tlanipa*) or “near,” to indicate a spatial relation or render a place-name.⁵⁵ However, in the tooth drawing in chapter 27, the three giant glyphic molars didactically announce that this picture is about teeth (and dental hygiene) and draw attention to the tooth-cleaning activities of the seated man. The artist demonstrates his versatility and facility in choosing to depict two modes of representation (European and indigenous): corporeal teeth (in the young man) and large glyphic teeth. In doing so, he moves the drawing into a figurative space between the two alphabetic texts that combines the naturalistic and the semasiographic.⁵⁶ The artist also demonstrates his inventiveness in creating an image that both “illuminates” and is more expansive than the Nahuatl text.

Paragraph 2: Folios 79v–82r

In the second paragraph of his “Relación,” Sahagún turns more specifically to his personal involvement in evangelization, the education of indigenous youth, the teaching of language, and the reciprocity of knowledge. He begins by describing the ancient Mexican books as

painted with figures and representations in such a way that they knew and had records of the things their ancestors had done and had left in their annals more than a thousand years ago. . . . Most of these books and writings were burned. . . . But many remained hidden, for we have seen them . . . [and] through them we have understood their ancient customs.⁵⁷

Had the artist of the tooth (see fig. 13.4) read this text? Was he responding to it by drawing on his knowledge of a traditional indigenous glyphic referent (the molars), as found in the preconquest books (“figures and representations”) Sahagún describes? Was the artist devising an image that responded to both the Nahuatl and the Spanish texts?

Sahagún turns from indigenous books to discuss the establishment of the Colegio de Santa Cruz in Santiago de Tlatelolco, where “the most capable boys, best able to read and write” were brought to live in the monastery school, where they were taught reading, writing, sing-

FIGURE 13.5. Neck. Florentine Codex, Bk. 10, fol. 80v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

ing, and grammar. Initially, Spaniards and other clergy mocked Sahagún and the other founders of the college for attempting to teach indigenous boys (“so incapable a people”) grammar, but after two or three years, the students “came to understand all the subjects of the grammar book and to speak Latin, and understand it, and to write Latin, and even to compose hexametric verse.”⁵⁸

On folio 80v, the image of a neck fills the space remaining at the end of and below the “ghost” paragraph title, “Seventh paragraph, of the neck with its circumstances,” clearly indicating that the drawing was executed after the title (fig. 13.5). Artist 2 repeats the familiar landscape setting, and the image again correlates to the Nahuatl term opposite (*quechtli*, or neck). A spectral, deathly pale, gray-green headless upper torso and neck outlined in black looms ominously on the horizon, appearing to emerge from behind a hill. The trachea and esophagus, also outlined in black and colored red, project upward from the neck, making the figure even more phantasmagorical.⁵⁹ The text below reads, “When the Spanish laity and clergy saw this [the indigenous students’ knowledge of grammar and proficiency in Latin] they marveled [*espantaronse*] much that [it] could be done.”⁶⁰ Was the artist responding not only to the Nahuatl term for “neck” in his drawing but also to the Spanish word *espantaronse*, which can mean “frightened,” as one might be on encountering a walking, dead, headless torso with bloody appendages protruding from its neck? Was he incorporating his knowledge of another frightening headless creature, the menacing and ominous “Night Axe” (fig. 13.6), an apparition that accosted indigenous men in the night?⁶¹ Was the artist again acknowledging both the Nahuatl and the Spanish texts in

FIGURE 13.6. Night Axe. Florentine Codex, Bk. 5, fol. 6v. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

constructing his drawing, as he would have done in other Florentine Codex chapters where both texts treat the same topic? Was he also drawing on his own knowledge of a headless being like the Night Axe or, cross-textually, referring to that of Book 5?

The Spanish laity and clergy were indeed afraid of the indigenous people in general and specifically those educated at the *colegio*, and they had good reason. The graduates of the *colegio* were trilingual (in Latin, Spanish, and Nahuatl) and, as Burkhart notes,

had been taught to reason according to Western as well as Nahua logical principles and to construct arguments according to Western as well as Nahua rhetorical arts. Who could be better equipped to compare and evaluate both cultures, to challenge Spanish authority on its own grounds, to subvert its paradigms through subtle manipulations and restatements? . . . Anomalies among the native people, the collegians were an affront to Spanish colonists aiming to make of the Nahuas a class of servile laborers.⁶²

Continuing his narrative of education of indigenous youth at the *colegio*, Sahagún changes from “we” to “I” to give a firsthand, eyewitness account to buttress his testimony:

I was the one who worked with them the first four years and gave them understanding in all subjects. . . . Because I was a witness to all these things, for I lectured to the Indians of the college on [Latin] grammar, I can accu-

rately tell the objections they [the laity and clergy] raised and the answers they were given.⁶³

Objections were raised to the indigenous boys learning Latin grammar to translate scripture into Nahuatl at a time when the Counter-Reformation Council of Trent had mounted vigorous opposition to vernacular scripture.⁶⁴ Having direct, unmediated access to scripture, the students might read of the polygynous patriarchs of the Old Testament (for example), which “would place them in danger of becoming heretics.”⁶⁵ Sahagún responds to these objections with an ardent defense of the production of scripture in the vernacular and of the grammarians (his former students), with unqualified praise for them and their work, and the importance of translation for conversion in the third and final paragraph of the “Relación.”⁶⁶

Paragraph 3: Folios 82r–84r

Sahagún lauds the *colegio*’s exemplary, faultless students and their essential linguistic role in the implantation of the Catholic faith through the production of vernacular texts:

This college has persisted for over forty years and its collegians have transgressed in nothing, neither against God, nor the Church, nor the king, nor against his state [*republica*]. Rather they have helped and still help in many things in the implanting and maintaining of our Holy Catholic Faith, for if sermons, *Apostillas*, and catechisms have been produced in the Indian language, which can appear and may be free of all heresy, they are those which were written with them. And they, being knowledgeable in the Latin language, inform us to the properties of the words, the properties of their manner of speech. And they correct for us the incongruities we express in the sermons or write in the catechisms. And whatever is to be rendered in their language, if it is not examined by them, if it is not written congruently in the Latin language, in Spanish, and in their language, cannot be free of defect.⁶⁷

However successful the Franciscans’ collaboration with and education of indigenous young men, their program was not immune from falling into disorder, through disease (the 1545 *cocoliztli* plague), insufficient oversight, and mismanagement of the *colegio* in the following twenty years. In the early 1570s, Sahagún was present when the school was reorganized and new ordinances created “so

that the college might progress.” After noting the “great blow” the 1545 plague gave the *colegio*, Sahagún then turns to the immediacy of “this plague, of this year of 1576 . . . for there is hardly anyone still in the college. Dead and sick, almost all are gone.”⁶⁸

This text is followed by a drawing of a hairy armpit that accompanies the word for armpit hair (*ciacatzontli*) at the end of the “ghost” paragraph title “Eighth paragraph, of the shoulders, arms, and fingers” (fig. 13.7, upper frame). Represented in dynamic motion, the armpit strides over the landscape, with its thickly luxuriant underarm hair flowing as though on a breezy day. The armpit (and the following torso drawing) has bones projecting out of the flesh at both ends in an anatomically incorrect manner, as the joint is in the armpit itself. It possible that the artist might have depicted the strolling armpit both to represent *ciacatzontli* as well as to convey the sense of departure in the Spanish text immediately above it: “[T]here is hardly anyone still in the college. Dead and sick, almost all are gone.”⁶⁹

A torso floats above the landscape in the space immediately below the “ghost” Spanish title “Ninth paragraph, of the body with its attached parts” and to the left of the Nahuatl term *tlactli* (torso) (see fig. 13.7, lower frame). Yellow beige in color and headless, the torso has markings on the chest that depict fourteen ribs (humans have twenty-four) and a long central element that resembles a spine rather than the much shorter sternum to which ribs are attached. Anatomically, the human shoulder has a socket joint in the scapula (the shoulder blade) instead of the double-knobbed bones depicted, but the image does fulfill, however inaccurately, the idea of a torso. The torso and the hairy armpit both reflect the artist’s ability to read the Nahuatl text, his artistic inventiveness, and his apparent lack of firsthand knowledge of human anatomy.

Sahagún’s concerns for the Colegio de Santa Cruz continue following the two drawings. He laments the current *cocoliztli* plague deaths (and those of 1545) and the lack of medical care, which could have been provided by indigenous doctors educated in the *colegio* (had it been properly supported). He also expresses his fear that the annihilation of the Mexican people is imminent.

The “Relación” and the “Ninth paragraph, of the body [trunk] with its attached parts” end at the foot of folio 84r next to the Nahuatl words *omicicuilli* (rib) and *eltepicicitli* (sternum) with the final drawing: a poignant and evocative image of a solitary young man with short, curly hair kneeling in an empty landscape (figs. 13.8 and 13.9). His

FIGURE 13.7. Upper image: hairy armpit; lower image: torso. Florentine Codex, Bk. 10, fol. 83r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

head and gaze turn downward, and he appears resigned and contemplative as, in a rather inscrutable gesture, he stretches out his right hand to the ground in front of him. His left hand rests by the front of his thigh. He wears a garment, rolled down at the waist, that covers his legs and envelops his feet (each separately wrapped in fabric), his bare chest frontally oriented to the viewer.⁷⁰

A double-scalloped line defines his pectorals, and his nipples are defined by small irregular circles.⁷¹ Irregular black dots interspersed on his chest depict the petechial eruptions of hemorrhaging documented as occurring with *cocoliztli*, a prelude to imminent death.⁷² Curiously, the young man kneels with his buttocks resting on his heels, the only male figure in the Florentine Codex depicted in this pose, the “Aztec woman’s pose.” Men are commonly shown kneeling in both preconquest and colonial images with one knee on the ground and the other knee raised with the foot on the ground. In the colonial period, both

men and women kneel with their thighs and upper torsos erect, often with hands clasped in front of their chests in attitudes of prayer, adoration, or obeisance. Is the young man’s “collapsed” pose, with his buttocks on his heels, an indication of resignation to his fate? A mural of the sacrifice of Isaac in the cloister of the sixteenth-century Augustinian convent of Metztlán (Hidalgo) depicts Isaac in the same submissive, kneeling pose in front of his father, Abraham.⁷³ Is this pose, when used by a man, associated with sacrifice, submission to the word of God, or trust in God’s providence?⁷⁴

Sahagún’s words immediately above the young kneeling man, “y ansi se mueren por no tener remedio, nj socorro” (and so they die having neither remedy nor aid),⁷⁵ form a haunting lament for the dead and dying. The young man’s solitary location in the landscape, his pensive downward gaze, and his hand gesture toward the earth are immensely touching and express the futility of the moment,

FIGURE 13.8. Final page of Sahagún's "Relación," chapter 27. Florentine Codex, Bk. 10, fol. 84r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.

reinforced by the heart-wrenching Spanish text immediately above him. This final image fully mediates between the Spanish and Nahuatl texts and ends the "Relación" on a tragic note. The left columns of the last twenty-five and a half pages of chapter 27 are devoid of words or images.

CONCLUSIONS

The seven Spanish "ghost" paragraph headings make it clear that Sahagún originally intended for the chapter 27 Spanish text to address the Nahuatl list of body parts. I suggest that the devastating effects of the 1576 huey cocoliztli epidemic caused him to abandon the intended translation of the Nahuatl terms for body parts and to write

instead his elegiac testament of the incomplete, even failed efforts to convert the indigenous people to the Church (the body of Christ) in the face of their imminent decimation. The text is also a paean to the intelligence, diligence, and impeccable character of his indigenous collaborators (his former students) of the Colegio de Santa Cruz and a lament for the lack of support for the college, which, had it been adequately financed, would have educated more doctors to minister to and save the indigenous victims of the plague.

Charged with creating drawings to accompany two disparate texts, Artist 2 responded imaginatively and authoritatively to the challenge. Making images that represented the adjacent Nahuatl words, reflected the Spanish "ghost"

FIGURE 13.9. *Kneeling man. Florentine Codex, Bk. 10, fol. 84r. Florence, Biblioteca Medicea Laurenziana, Med. Palat. 218–220. Courtesy of MIBACT.*

headings, and occasionally acknowledged the Spanish text suggests that Artist 2 was literate in Nahuatl and Spanish and able to read both texts. Scribe 1, in whose identifiable handwriting the “Relación” is written, was himself trilingual (in Spanish, Nahuatl, and Latin).⁷⁶ In the second drawing, “Tooth,” Artist 2 used a somewhat didactic visual approach to explain *tlantli*: corporeal, as teeth in a human mouth, and semasiographical, as a glyphic referent. Was the artist incorporating both Sahagún’s subsequent reference to the indigenous use of “figures and representations” and his own knowledge and facility with traditional glyphs and of dental hygiene in chapter 28 to further instruct the viewer?⁷⁷ For the third drawing, “Neck,” the artist might have responded to the Spanish text’s *espantaronse* as “frightening” rather than “marvel at,” in addition to referencing the ominous indigenous apparition, the Night Axe from Book 5. The fourth drawing, “Hairy Armpit,” is quite inventive and imaginative, although anatomically inaccurate. Its strolling appearance may again be the artist’s response to the text above the image, “casi todos son salidos” (almost all are gone),⁷⁸ and conveys boldness in the face of approaching death. The fifth drawing, “Torso,” appropriately responds to the paragraph headings in Spanish and Nahuatl, as well as to the Nahuatl

word for “torso,” *tlactli*, and is again anatomically inaccurate. In the sixth and final drawing, “Kneeling Man,” the artist skillfully links the Nahuatl and the Spanish texts, captures both Sahagún’s deep despair and his own, and poignantly represents the very present, tragic moment in which the drawing and the “Relación” were created. The (mostly) empty, rolling green landscapes with body parts and the tragic figure of the kneeling man reflect the desolation and indigenous depopulation caused by disease and disorder even as trenches were being dug for the bodies of the plague victims in the plaza outside the scriptorium of the Colegio de Santa Cruz, Tlatelolco.⁷⁹ As Sahagún and his collaborators worked, despair and the smell of death hung in the air.

NOTES

1. “Book 10 of the vices and virtues of the Indian people and of all the internal and external parts of the body and of the diseases and indicated medicines and of the people who have come to inhabit this land” (my translation). A translation of the Spanish text of Book 10, chapter 27, is in Sahagún 1950–1982, introductory vol., Bk. 10, 74–85. Related anomalous interpolated Spanish texts that treat Christian themes unrelated to the Nahuatl text are in Book 11, chapter 12, paragraphs 6, 7, 8, and 9, and chapter 13, paragraphs 1 and 2 (Sahagún, 1950–1982, introductory vol., Bk. 11, 89–99). Dibble (1982a, 20) provides an overview of textual anomalies in Sahagún’s *Historia*. See also Sousa, chapter 12 of this volume.
2. See López Austin 1988.
3. Magaloni Kerpel 2011b, 47–55; chapter 10 of this volume.
4. López Austin 1974b, 212; 1988, 1:44.
5. Burkhart (1996, 55–65) provides an overview of the Colegio de Santa Cruz, Tlatelolco.

6. Phelan 1956, 42.
7. Turley 2016, 128–131.
8. Bustamante García (1992, 294–310) discusses the two groups of Franciscans in New Spain.
9. Baudot 1990, 13–17.
10. Sahagún 1979, Bk. 4, app., fol. 78r.
11. Sahagún 1950–1982, introductory vol., prologue to Bk. 2, 55.
12. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 46–47. See also Baudot 1988, 119–134.
13. Acuña-Soto, Stahle, Therrell, Griffin, and Cleaveland 2004. Drawing on colonial descriptions of the disease and twentieth-century scientific analytical methods, medical historians and scientists have determined that *cocoliztli* was a hemorrhagic disease endemic to Mexico and without known European or African precedents. Four major outbreaks occurred in Mexico in 1545, 1576, 1736, and 1813, with ten lesser outbreaks in the seventeenth and eighteenth centuries. Marr and Kiracofe (2000, 344, table 1) provide a summary of epidemics occurring in Mexico from 1520–1616 by year. See also Acuña-Soto, Calderon Romero, and Maguire 2000, 733–739; Acuña-Soto, Stahle, Cleaveland, and Therrell 2002, 360–362; and Somolinos D'Ardois 1982, 369–381.
14. Sahagún 1950–1982, introductory vol., Bk. 11, chap. 12, para. 8, 94.
15. Acuña-Soto et al. 2004, 1–3.
16. For other reasons some Florentine Codex Nahuatl texts were untranslated; see Dibble 1982a, 20; Peterson 2003, 239, 243–244. López Austin (1988, 1:44) thinks the terms were not translated because “Sahagún considered this part of his book to be a rich source for the lexicon of his dictionary but thought it absurd to translate what was only a list of words.”
17. Sahagún 1950–1982, introductory vol., Bk. 11, chap. 12, para. 8, 93–99.
18. Sahagún 1979, Bk. 10, fols. 70r–70v. All translations of the Spanish paragraph headings are my own. All translations of the Nahuatl paragraph headings are from López Austin 1988, 2:77, unless noted otherwise.
19. Garone Gravier 2011, 185–187; see p. 187, fig. 6, Scribe 1.
20. Nine Nahuatl paragraph headings share folios with the “Relación.” The Spanish text has seven parallel titles (paragraphs 2, 4–9). The first is missing because it was supplanted by Sahagún’s title for the “Relación”; the third was not written.
21. Occasionally a word is broken before the heading, and the second half of the word continues after it as though the body part heading did not exist; Sahagún 1979, Bk. 10, fol. 72v, para. 2: “re” before the title and “gia” below it (*regia*, or govern). Other examples in Book 10 can be found on folios 76r and 78v.
22. Sahagún 1979, Bk. 10, fols. 70r–84r.
23. See Boone, chapter 6 of this volume, for a comparable listing of deities’ accoutrements in the *Primeros memoriales*.
24. López Austin 1988, 2:1–3 (in Nahuatl) and 2:67–69 (English translation).
25. López Austin 1988, 1:18.
26. López Austin 1988, 1:170.
27. López Austin 1988, 2:13–66 (in Nahuatl) and 2:77–129 (English translation).
28. López Austin 1988, 1:44–45.
29. As López Austin noted (1988, 1:44–45), the Nahuatl word for testicles was omitted from the body part lexicon in chapter 27.
30. Sacrificial and battle scenes in the Florentine Codex often depict bodies being dismembered, chests opened, and hearts extracted, which provide comparable images of body parts that are lacking here.
31. “The ancient Nahuas believed that part of an individual’s vital forces resided in his bones. The femur of a sacrificed individual was kept in the house of the warrior who had captured him in combat. . . . The name for the femur of a sacrificial victim gives some idea of its sacred nature: it was a *malteutl*, ‘the captive god’” (López Austin 1988, 1:166).
32. In sixteenth-century European painting, the infant Christ is often shown nude with genitals in an expression of his humanity, of God Incarnate, and, as Leo Steinberg (1983, 6) noted, “very man, very God.” The sixteenth-century Mexican Codex Mendoza includes a recumbent nude male with genitals in the place-name of Miquiyetlan (Berdan and Anawalt 1992, 4: fol. 10v).
33. Thomas Bestul first alerted me to the significance of the three crosses (personal communication, February 8, 2016). Church historian Herbert Thurston notes that the sign of the cross is used in exorcisms, “to commence the liturgy of the Mass, before the reading of the gospel invoking the word of God, at other points of the Mass, and generally with the sacraments and sacramentals of the Church. It . . . [invokes] the presence of the Trinity” (Thurston 1912).
34. Tavárez 2000, 25.
35. Jaime Lara noted that “the sign of the cross was used when someone had to solemnly swear to something,” suggesting that Sahagún might be swearing to the veracity of his statement (personal communication, March 24, 2016).
36. Burkhart 1989, 28, 39.
37. Sahagún 1950–1982, introductory vol., Bk. 10, 74. See Peterson, chapter 11 of this volume.
38. Sahagún 1950–1982, introductory vol., Bk. 10, 75. *Republica* is translated as “state” in Sahagún 1950–1982, introductory vol., Bk. 10, 74–85. I have retained the original spelling from Sahagún’s Spanish text.
39. Tooley 1953, 64. According to Tooley, “The astrological system of the world was . . . universally accepted in the later Middle Ages, and expounded in literature at all levels of scholarship” (64). She identifies Ptolemy, Aristotle, Galen, Saint Thomas Aquinas, Albert Magnus, and Duns Scotus, among others, as sources for the sixteenth-century French jurist and political philosopher Jean Bodin’s ideas on the formation of a republic appropriate to the natural aptitudes of its people (64–65). Cristián Roa-de-la-Carrera (2010a, 84) points out that the Dominican friar Bartolomé de Las Casas in his *Apologética historia sumaria* similarly applied the theory of climate and the stars to the indigenous people of the Americas drawn from Hippocrates’s treatise *De aere, aquis et locis* (Air, water, places), published in a sixteenth-century edition of Galen’s works. See also Solari 2016, 486–487.
40. Sahagún 1950–1982, introductory vol., Bk. 10, 75.
41. Sahagún 1950–1982, introductory vol., Bk. 10, 77.
42. According to Kagan (2000, 28), “in the sixteenth century . . . *policia* . . . implied all of the benefits that accrued from urban life: law, order, morality, and religion.”
43. Sahagún 1950–1982, introductory vol., Bk. 10, 75–76. Gibson (1964, 150) attributes drunkenness to “the deep-seated distress of the native society, from which intoxication offered a relief.” Burkhart (1989, 29) points out that “[t]he most frequently mentioned *tlatlacolli* are sexual excesses, intoxication, and theft.”
44. Sahagún 1950–1982, introductory vol., Bk. 10, 77; my emphasis. The terms *república de indios* and *república de españoles* refer to indigenous and Spanish people in sixteenth-century Mexico as separate and segregated entities, socially and legally. On this, see also Tavárez 1997, 1255.
45. Sahagún uses “idolatry,” “idolater,” and “idolatrours” twenty-two times in paragraph 1.
46. Sahagún 1950–1982, introductory vol., prologue to Bk. 1, 45.

47. Sahagún 1950–1982, introductory vol., Bk. 10, 75; my emphasis.
48. See Peterson, chapter 11 of this volume.
49. Solari 2016, 481, 483n10: “This linkage between disease and idolatry can be traced . . . back to [the Christian theologian] Tertullian’s usage of the ‘contagion of idolatry’ . . . in the second century.”
50. Sahagún 1950–1982, introductory vol., Bk. 10, 78–79; my emphasis. This passage refers to the sixteenth-century practice of creating a separate indigenous town (*congregación*) to provide a framework for administrative efficiency, political control, and Christian indoctrination (see Gibson 1964, 282; Baird 2005, 295–296).
51. Bustamante García (1992, 288–289) notes that Sahagún had “a utopic state in mind” and drew on a vast utopian literature and widespread ideas of utopian republics that were in circulation in the sixteenth century. Bustamante points to such authors as Plato (*Republic*), Saint Augustine (*The City of God against the Pagans*), and Sahagún’s contemporary Thomas More (*De optimo rei publicae statu deque nova insula Utopia* [On the best state of a commonwealth and on the new island of Utopia], completed in 1516); and he persuasively argues that Saint Augustine’s *City of God* served as the model that defined the contents of the Florentine Codex (Bustamante García 1992, 355–364).
52. Sahagún 1950–1982, introductory vol., Bk. 10, 77–78. Burkhart (1996, 60) notes that “attributing excessive sensuality and carnality to colonized peoples was widely used as a mode of asserting and legitimizing European domination.”
53. Sahagún 1950–1982, introductory vol., Bk. 10, 79–80. On the use of corporal punishment and imprisonment in Franciscan conversion practices, see Tavárez (2011, 17); Turley (2016, 93, 98).
54. Sahagún 1950–1982, introductory vol., Bk. 10, 81.
55. Two incisors are commonly depicted in “tlan” glyphs, but three teeth are not uncommon, and sometimes four are depicted in the place glyphs of the Codex Mendoza. See Berdan and Anawalt 1992, vol. 4; Boone 2000, 32–33, 36–37. Peterson (2003, 242, fig. 8) notes the use of the tooth glyph in the Florentine Codex.
56. On this, see also Sousa, chapter 12 of this volume.
57. Sahagún 1950–1982, introductory vol., Bk. 10, 82.
58. Sahagún 1950–1982, introductory vol., Bk. 10, 82.
59. “Trachea” (*cocotl*) and “esophagus” (*tlatlboatztli*) are also in the Nahuatl text. Sahagún 1950–1982, Bk. 10, 108.
60. Sahagún 1950–1982, introductory vol., Bk. 10, 82.
61. Sahagún 1950–1982, Bk. 5, 157–158.
62. Burkhart 1996, 59.
63. Sahagún 1950–1982, introductory vol., Bk. 10, 82–83.
64. The Counter-Reformation Council of Trent prohibited the translation of the scriptures into the vernacular (1564), and in May 1576, the general council of the Spanish Inquisition banned Nahuatl scriptural editions. See Nesvig 2013, 165–201.
65. Sahagún 1950–1982, introductory vol., Bk. 10, 83.
66. Bustamante García (1992, 355–358) points to Saint Augustine, *De doctrina christiana*, as the model for Sahagún’s emphasis on language and translation in the conversion of pagans.
67. Sahagún 1950–1982, introductory vol., Bk. 10, 83–84.
68. Sahagún 1950–1982, introductory vol., Bk. 10, 84.
69. Sahagún 1950–1982, introductory vol., Bk. 10, 84.
70. Shrouded figures’ feet are individually wrapped in Sahagún 1979, Bk. 5, fol. 13v, and Bk. 8, fol. 27v; in the Codex Telleriano-Remensis, fol. 46v, the shrouded ruler’s feet are also wrapped individually (Quiñones Keber 1995, 96).
71. Other male figures with pectoral muscles defined by a line with two downward curves are found in Sahagún 1979, Bk. 10, fols. 109v and 111r, and Bk. 11, fol. 34v.
72. León 1982, 383–397; cited as one of the characteristics of *cocoliztli* in Marr and Kiracoffe 2000, table 2, 352. Lung hemorrhage was noted in some of the autopsies performed (Acuña-Soto et al. 2004, 2). See “Petechia,” Wikipedia, <https://en.wikipedia.org/w/index.php?title=Petechia&oldid=722407791> (accessed May 30, 2016), for an excellent photograph.
73. Lara 2008, 232–234, fig. 9.4.
74. The deity Xiuhtecuhtli kneels with his buttocks resting on his legs in the Codex Telleriano-Remensis, ninth *trecena*, fol. 24r, glossed 1563 (Quiñones Keber 1995, 51). Quiñones Keber (1995, 190) suggests that this *trecena* might have been consulted for rituals associated with the sacrificial death of a warrior.
75. Sahagún 1950–1982, introductory vol., Bk. 10, 85.
76. Garone Gravier 2011, 186–187.
77. Sahagún 1950–1982, introductory vol., Bk. 10, 82. The tooth drawing is in Sahagún 1979, Bk. 10, fol. 77v; the reference to the books is on fol. 79v.
78. Sahagún 1950–1982, introductory vol., Bk. 10, 77.
79. Torquemada 1986, Bk. 5, chap. 22, 642. See also Mundy 2015, 203.
